FEC-TOR is pretty trivial to encode, it's just the 5 bit teletype code,
with the start and stop bits stripped and some parity bits added, and
the three character block sent twice with some bits inverted.

Remember, this stuff was designed in the late '60s-early '70s to retrofit
onto existing RTTY gear, before the days of microcomputers. Back when
the hardware for a one byte register would cost $20 or so.

But it's all uppercase, so I doubt that any newswire would be interested
anymore.

If you are going to blame anyone for this its the media. This just came
again as an AP story. Nothing new, just stirring the pot.

>getting a RTTY decoder.

Just be aware that, if you want to get serious, you will have to get
a fairly high performance receiver, (on the par with an Icom R-75 or
the like). The maritime TOR stuff is narrowband shift (170? Hz) and the
channels are closely spaced (1/2 kHz).

I use(d) an Kenwood R-1000, which is designed mostly for audio broadcast,
and found that the 2.1 kHz narrow bandwidth (SSB) filter was often a bit
too wide and that the tuning drifted just a bit too much (maybe 50 Hz) so
that you had to babysit it to get solid copy.

Speak for yourself. You answered the post right instead of the
enlightened one.

Yeah, that's what I'm asking for "Proof." There is not any proof he owns
a SW radio or listens to it. It would be easy to do but Bryant can't do
it.

Try direction finding with one of your loops. They may have arraigned for the California VOA relay if they thought that H. Frances was going to hose them over. Charley took them out for several days, and maybe they didn't want to repeat that.

I'm well aware of the perversion of terms that has occurred over time.

So how you going to make that work, have the UN regulate all trade? How
do you get nations to negotiate trade agreements that are not in their
best interests?

You are not in the best spot for the off shore MW. You need a
specialized antenna like a Beverage or amplified loop.

They would not bother to do that. Just blowing your head off is good
enough for them. We were being attacked by them long before Iraq and it
took the twin tower for us to react. The world then heard from us and I
hope we never stop until all the terrorists are dead wherever they hide.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 05/2330Z SEPTEMBER 2004 BY IPS RADIO AND SPACE SERVICES
FROM THE AUSTRALIAN SPACE FORECAST CENTRE
SUMMARY FOR 05 SEPTEMBER AND FORECAST FOR 06 SEPTEMBER - 08
SEPTEMBER
STATUS INDICATORS SOL:GREEN MAG:GREEN ION: GREEN
1A. SOLAR SUMMARY
Activity 05 Sep: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number for 05 Sep: 103/52

1B. SOLAR FORECAST
06 Sep 07 Sep 08 Sep
Activity Low Low Low
Fadeouts None expected None expected None expected
10.7cm/SSN 105/54 110/60 110/60
COMMENT: Some spot development between 04-20UT to north-east and
south east of 667. Magnetic configuration of this region remains
simple. Background xray flux only shows a small increase toward
the end of UT day. This trend may continue if current spot
development around 667 continues. 667 is currently quiet with no
solar radio events observed on the Culgoora Radiospectrograph.
Solar wind speed was steady until around 17UT afterwhich jumping
to 360 km/sec.
The north south component of the interplanetary magnetic field
was southward 10nT 13-17UT. The origin of the small jump in the

solar wind speed is unclear. US Space Environment Centre reported a filament eruption at N22W30 around 06UT. Subsequent viewing of LASCO C2 imagery (as C3 had stopped) showed a north-west directed bubble. The lack of subsequent images hampered decision on geoeffectiveness. But available imagery suggests that the CME bubble did not expand greatly and appeared directed mostly away from the Earth. This estimate may be revised as more images become available, as these would show any further expansion of the CME. Also, speculatively, recent far-sided halo mass ejections suggest that a possible active region may rotate onto the solar disk in 5-7 days

time.

Radio Damascus in English on 13610 @ 21:12 UTC. There is QRN and I need to listen in LSB due to intermod from EWNT up on 13615, but it is making it over much better then it usually does at this time. I can actually listen to it.

Currently news in English.

I kind of agrtee with DX Ac on this one. listening for only two inutes dosn't always give you a correcr i.d even if you actually heard a i.d.

such as a statin being relayed. as a made-up example HCJB Quito, Ecuador being relayed over WCRB Okechobee Florida or WMLD Maryland.

and to make matters even more confusion, one of my local tv stations constajntly I.D.'ed in a way that made them look like they were actually the other tv station in town!!!!

they did own both tv stations in town. WOIO 19 and WUAB 43. showing different programming. 19 is CBS. 43 is UPN.

43 identified with "WOIO-TV 19 Shaker Heights-Cleveland" in big printed letters taking up almost the whole screen followed by "WUAB-TV 43 Lorain-Cleveland" in really tiny print so tiny that you couldn't really see it on a 20 inch tv unless you were right up at the screen, and even then, you really needed a magnifying glass.

Is that way of giving "station identification" legal?

IF he's listing his "Assumptions" on what he heard, then he might not have heard those stations.

sometimes there's more than one station on the same frequency where you can only hear the one one day and only hear the other another day.

true example from my loggings (althogh this veers off of shortwave a bit)

one day, on 162.400 MHZ, I hear only NOAA weather radio. I think from Castilla, Ohio (spelling?). On another day on the same radio and same frequency, 162.400 MHZ, I hear only "Enviroment Canada"'s weather radio.

Some days, I can hear both depending on which direction I turn te radio.

On a normal day, I can't hear anything on 162.400 MHZ

My local NOAA weather radio station is on 162.55 MHZ which I can hear all of the time.

TELAMON,

Here it is Labor Day 2004 and John 'ff' Kerry has Flip-Floped again.
John 'ff' Kerry aka: The King of Flip-Flop

Now John 'ff' Kerry is calling our efforts to "Librate" Iraq.
(The Liberal Democrats call it 'occupy'.)
- The Wrong War
- In the Wrong Place
Looks like for John 'ff' Kerry we are back in the 1970s again.

Does anyone else ever wonder where someone is physically after reading some type of reception post? Sometimes I read that Bill or Joe has received a station clearly but when I attempt I get alot of nothing. I am always wondering where Bill and Joe are located and what that has to do with the reception and my lack of.

Thanks

You really don't need this unless you are receiving digital modes. And at that, unless the room you are in drastically changes temperature or the 12v supply changes voltage, you don't need the stability. However, there are some people who feel better having it.

about 20 years ago, there used to be a longwave radio station in Cleveland, Ohio (beacon) that also had weather announcements in regular AM voice.

I forget the frequency. I think it was somewhere between 300 and 400 khz (maybe 344 khz?)

well, whatever frequency it was or is, is this station still on the air, and if so, does it still transmit weather announcements in regular AM voice?

Now, I have to get back to Lake Erie. ;)

Tell that to the IRA. You remember Ireland, right? Where so many Christians have blown up so many Christians? So...not all terrorists are Muslims, and not all Muslims are terrorists. All trees are plants, but not all plants are trees. Get it?

> Since Muslims don't do anything to
> condemn their terrorists, it means that most Muslims are de facto
> terrorists.

False premise. Muslims -do- condemn the terrorists. Maybe not as vocally as you might like, and maybe it's not reported as it should be. Since your premise is wrong, your conclusion is wrong.

I don't hear a lot of Christians jumping up and down whenever one of -their- fundamentalists whacks an abortion doctor. Eric Rudolph hid in our own backyard for five years, getting help the whole time from the local Christians. He blew up an abortion clinic, a gay bar, and a bunch of absolutely innocent people at the Summer Olympic games in Atlanta. I didn't hear many outraged Christians then. No, they just helped keep a guy responsible for several deaths out of the reach of law enforcement for half a decade, incidentally putting you and yours (and me and mine) at risk. How much outrage did -you- express then? Or were you one of those knee-jerk reactionaries that wanted to lynch Richard Jewell for the Olympic bombing? Trial? Who needs one? It's obvious who's guilty! I wonder. I won't even go into all of the Iraqi's that are risking their lives (and getting killed for their efforts) working alongside of us to rebuild and police their country. Unless, of course, they're all terrorists waiting for their moment. But wait...those Iraqi cops that are getting popped daily are being killed by terrorists and their supporters, aren't they?

Hmmm.

I typed in "Muslims condemn" at google,

http://www.google.com/search?sourceid=navclient&ie=UTF-8&q=Muslims+condemn

and the -very first hit- lists more Muslim condemnations than you could shake a stick at. There's over 150 links at that page alone, including

Muslims that are serving in the US armed forces. That google link will even hook you up with Aljazeera, and an article called "US Muslims condemn brutality and bigotry".

Let me quote:

"In mid-May, the Council on American Islamic Relations (CAIR) launched an online petition drive against what it called Not in the Name of Islam.

The effort was an attempt to give US Muslims an opportunity to publicly denounce "the violent acts of a few Muslims" such as the beheading of Nicholas Berg in Iraq.

"No injustice done to Muslims can ever justify the massacre of innocent people, and no act of terror will ever serve the cause of Islam," the petition states. "We repudiate and dissociate ourselves from any Muslim group or individual who commits such brutal and un-Islamic acts."

More than 640,000 individuals and members of signatory organisations have signed the petition so far, according to CAIR's website."

<end quote>

There's much, much more there, and it's worth the read.

As for overseas Muslims, I think we ought to cut them a -wee- bit of slack. I think it's more than likely that those Muslims fear reprisals for openly condemning the fundamentalists amongst them, just as people living in 1940 Germany feared speaking out against National Socialism. That doesn't mean that there aren't Muslims that are helping us. It was an Iraqi that led us to Jessica Lynch, and and Iraqi doctors and nurses that gave her the best care that they could...even after the Iraqi army had fled the hospital, leaving her behind. I have no doubt that they were Muslims, although I of course can't say for sure.

Let's kill them and their families, too. Just to be sure.

No, on second thought, they must be Christians. Muslims, of course, are incapable of anything but the most beastial cruelty.

As for the dancing Muslims, I too always find myself wishing that I was over with a few hand grenades and a Kalishnikov. But then, it's not against the law to hate Americans. People right here in our own streets have the absolute right to do the same sort of dancing. And as much as I might hate them for it, and want to hurt them over it, that's the way it ought to be. That's what freedom is...you remember freedom? That concept that we're trying to spread around over there? And for every Muslim dancing in the street, I strongly suspect that there are many more hiding at home shaking their heads...or crying with us.

If you think that we've been catching those people on the playing cards because our soldiers recognized them, or because they showed valid ID when they were asked, think again. We're getting help fingering these people. We tried to bomb Saddam at a safe house. Where did we get that information? It

wasn't all from monitering cell phone useage. And what about Odai and Qusai Hussein? We were able to kill them because an Iraqi, probably a Muslim, tipped us off.

But the more I think of it, you're right. Not enough of those slanty eyed Japs spoke up during the war, so we should have nuked the whole set of islands. Hey, if they're not courageous enough to face the wrath of their peers and their government, to Hell with them. Except the geisha girls. I could use few of them. And there's even Biblical precedent for that, so I want my share.

> Only now are the Muslims in the Middle East beginning to realize that
> they are all viewed as terrorists,

Yep. That's the why the world is calling for genocide. Oh, wait...they aren't, are they? We aren't, are we? We want the -truly- guilty, because we're a nation of law.

> and it's too late for them to do
> anything about it any more. Russia is now thinking about nuking a few
> terrorist enclaves to demonstrate some REAL terror to the bastards.

That's absolute and utter bullshit. No one is about to nuke anybody, regardless of how much they deserve it.

Let me qualify that. If there's any nuking going on, it'll be directed at us by the terrorists, not the other way around. Which is why getting rid of Saddam was a good thing. But we don't need to pave the Middle East to do it. We'll kill them one by one. (Or ten by ten, etc.) That's the American way. Not carpet bombing or nuking the entire region. Your "death to them all" crack is more in line with fundamentalist thinking than anything. It's unreasonable, it's impractical, it's injust and it's un-American. That's not the way we do things. Yes, it's a fight to the death, and yes we need to go -wherever- they are to kill them. But scorched earth isn't the answer.

> Good. They brought it on themselves when they started purposely
> killing school children. Death to them all.

They did all die. Which is a shame, really. Now the Russians can hunt down their accomplices. That's the way civilized nations handle things. And it's pretty much an open secret that while Palestinians have been blowing up Israeli school children off and on for years, it's the US that stays Israel's hand in the reprisal department.

Have you ever bitched about -that-?

No, just kill them all and let God sort them out. By the way: it was a genocidal Christian that coined that phrase.

Especially MW. I've been lucky, though, in trying to listen to Webcasts to verify who I'm hearing on my radio.
They're frustrating, though...even when they do ID, they don't necessarily use call letters. Just saying "CBC" doesn't tell me where they're transmitting from, which is what interests me the most.

Digital readout is not all it's cracked up to be, especially in low end
radios (which does include all the models listed). It causes birdies and
other digital hash that disrupts reception of otherwise copyable signals.
For real DX work, I'll take an analog tuner any time.

Received Monaco Maritime Radio via grey line, in Auckland, New Zealand.
Yesterday, Sep. 6, at 06:00 UTC, with an announcement preceded by chimes:

"This is Monaco Radio, Three-Alpha-Charlie" repeated for about three
minutes.

Couldn't hear their weather broadcast to the Atlantic, which is usually
around 09:33 UTC. Propagation had disappeared by then.

Mark.

I'm stupid. Tell me how this ties in to Iraq and Hussein, who El Quaida and Ossama bin Laden hated. Bin Laden even had a couple of contracts put on Hussein because he was running a secular state.

There is NO connection between New York and Iraq. Bush has even said they had no evidence. It was all done under false pretenses and you know it.

A crystal is used to set the frequency in the radio. Crystals will
change frequency a bit with changing temperatures This is called 'drift'.

To prevent this, a really accurate crystal will be held at an even
temperature by some sort of heating device. The temperature of this has
to be above any normally encountered room temperature...for obvious reasons.

It's easier to vary the heat to the crystal than to adjust the frequency
by other means. It may be a nice thing to have, but most likely
unnecessary. It may be good if you were taping all night and didn't want
the station *maybe* slowly fading out due to frequency shift.

The worst radio I've ever seen for this was a cheap 35 dollar Grundig(1)
multiband. It would change 10 kilohertz in under three hours. A related
problem is it's inability to keep time. Garbage.

Thanks for the logs! Those are enviable... we who live in the north-central US (Minnesota) do not usually receive the nice Trans-Pacific MW or even SW stuff that you folks do in the Pacific Northwest. However, I have been focusing on MW this past weekend, and I have noticed a big jump in catchable signals here in MN. I've logged quite a few stations that weren't coming in to my location at all even last week. I am usually sleeping during the wee hours, when the pursuit of MW DX is most fruitful, but even at 10:00 pm CDT, I was getting stations from 2,000 miles hence.

Have fun!

Jackie

One of the problems you may encounter from copying more than one list at
a time so you don't get caught at it is getting "your log" out of order.

Either that or you are a time traveler. If that is the case then give
Art Bell a call you poser.

Not bloody likely. They're sending ME the money. I've already sent the
funds they need to look after the corrupt bank officials. It's been a
few months now but these things take time.

Well, in that case I'm printing my own money. I'll be on a three dollar
bill and Hillary, Bill and Kerry will be on the other denominations.
Then I'll finally be part of the elite in this country.

I think Steve posted this the other week but I did not pay attention and was looking for New Zealand on 15720 this afternoon my time on the west coast. Needless to say I could not find them right away until I stumbled on 17675.

This frequency is working as well for me as the 15720 was and I wonder how it is working for other people.

I had a nice afternoon in the park on the hillside behind Ventura overlooking the ocean. Took the 7600G along and threw the roll up wire antenna over a tree branch next to the picnic table. Tuned in a number of international broadcasts on it. Brought some food and a book on antennas and had a nice time. Sure can't beat the view.

Oh yeah see:

Hi Jackie,

I noticed the Boulder mid-latitude "K" Index had been low for a few days straight. When coupled with relatively low solar flux numbers, this very often indicates good mediumwave and lower shortwave conditions.

I suppose if I had tuned some of the domestic 10 kHz channels I might have heard a number of Alaskan stations, which are moderately difficult from Washington State (along with Hawaii). But with the foreign stations coming in, it was an easy decision to try for the "splits".

These stations I logged from Japan and Korea on mediumwave are common catches during my DXpedition trips to the WA coast (usually to the small community of Grayland), but this is the first time I've had much success inland and near my mediumwave locals. It takes really good receivers and antennas to pull in the (usually) weaker trans-Pacific MW DX amongst the powerful stateside signals.

It can be tough to roll out of bed early enough to catch the DX, though!

Good Listening,

Guy

Congratulations and well done on some superb logs as usual, especially from suburban Puyallup.

RRI Serui is interesting. I see that it is now moved from 4606.6 to 4605! - I think reception in U.S. is favoured by the fact that the Serui TX has the large mass of Irian Jaya mainland behind it and the high mountains. In my empirical experience this would favour transmission to your QTH as some of the transmitted signal would bounce off the mountains in your direction. Received here in Montagu at 2100 utc, bang on local Serui sunrise. Very faint though and confirms it's 500 watt power. Only managed a very faint RRI "Radio Republika Indonesia" ID. Signal was barely readable and only came in for about ten minutes.

OTOH I received RRI Fak Fak also at 2100 utc booming in quite clear with excellent ID's on 4790 Khz. According to my theory Fak Fak is located on a large bay with its outlook pointing directly to South Africa and mountains behind the TX favouring reception in my area. This is also confirmed by the fact that the signal is so strong here that it gives the impression that the TX power is much more than the listed 1 Kw, but bear in mind that it is not received in the U.S. at all.

Both Serui and Fak Fak were received at 2100 utc on 040906
They are both equidistant from Puyallup and Montagu - some 7,500 miles.

What receiver are you using, single or double conversion? It could be an image. At 4810 (900 below) I'm getting a time-signal type beeping sound. It is very strong and can be heard at 4790 khz as a "whoosh, whoosh" sound, and apparent image is on 5700 khz (455*2 above 4790) when using a single conversion receiver as a regular tick sound. I posted about this station before, and it was suggested as a possible idling utility station by DxAce.

Listen to the clips here: http://dspace.dial.pipex.com/brogers/page3.html and see if you find anything like it.

> I would like to see a copy of Shortwave Magazine though. Any comments on
> that one?

I buy Shortwave Magazine each month (I live in Ireland, so the content is pretty relevant). As you might guess, it is very UK-oriented (eg. reception logs) but it does have good general articles, too. It has regulars like what's happening on SW in the different continents, both about radio and TV (under the columns 'Bandscan <region>' and regularly features transmitters of interest in the UK and occasionally Ireland. There are also other articles each month of interest to the radio amateur reader. While it's called 'SWM', it does cover more than the 0-30MHz spectrum, for example, it also has articles relating to the air band.

I buy my copy from a newsagents (it sells for ï¿½5.80 = US$6.90 at the moment, rate of sterling dependent), their subscription rates seem to be pretty reasonable as far as magazines go, probably because it's not bulky like a computing magazine. I don't know how much it retails for in the US (and have never seen Monitoring Times for sale here) so I'm unable to compare the two. Not sure if the magazine is as relevant in the US (wrt some of its articles) but I'd certainly recommend buying a copy to see for yourself - if you can find it on sale somewhere!

That's not a good frequency change for the US east coast. The 16-m band doesn't hold up much after sunset with the days getting shorter and the solar flux continuing to drop. I suppose they made this change for the coming summer season in their area.

Winter propagation has it's advantages but the downside is losing the
higher bands (above 15-mhz) after sunset in the winter, especially with
the declining solar flux.

Try to get it through your head that we were attacked by a relatively
small minority of Islamic fanatics. The moderate majority of Muslims
must be encouraged to take on the fanatics within their religion if this
kind of terrorism is to be defeated. The west can not do it alone. It
must be done within the Muslim community.

Why would you say Fak Fak is not received in the U.S. at all? It is reported
here from time to time.

I don't think the mountains have a lot to do with it.

Oh really? Well, let's start with being in Cambodia, Christmas 1968... Yeah, yeah, and Nixon was President... yeah... that memory is seared -- seared, into my memory....

How is that just for starters?

Kerry is a fraud, a fabricator, and a liar.

French programming Monday afternoon, heard on my car radio from Fifth Avenue
all the way to the Nassau County line.
STEREO!
Must be running kW or more. Possibly a second station under it.

I assume French is Haitian; channel was previously Spanish religion.

Any idea of location?

Fak Fak signal still holding up well here, SCI (Song of the Cocoanut Isles) at 1200, mentions of Indonesia, then into presumed news, and the ocean radar (swisher), has faded a bit. Like a lot of stations, the voice modulation seems a bit low, but the music comes through quite well.

One of the better Indo's on the band this morning.

The Palstar R30 is one heck of a good receiver. If you can live without bells and whistles, and want a solid radio that can handle big antennas without overload, this one is for you.

I don't think the collins filters are much better than the Murata.

I love my R30 and have run it with 700 ft of wire for an antenna ... no BCB overload.

Highly recommended.

If you're familiar with the schedule and the announcers/programs, you can
go that fast. I can hear the Canadian accent on RCI in an
instant, Radio Netherlands broadcasts in English have a certain
vocabulary that is unique, BBC news has a very exact style and locution,
etc. Others here can identify the
exact transmitter being used by the hum. Now, I can only do this for
a few big powerhouse Euro/NA broadcasters - doing this for a wide range of
African/Arabic/South American/etc. broadcasters is way beyond my skill.

Tim.

Now you're back peddling.
You know what that means, right?
In case you don't, it means this: It's what a spineless coward does when he errs in his speaking, and then rather than apoligizing and moving on like a grown up he waffles and lies and figets with himself. It's quite embarrassing really.

They also seem to be on 11820 starting at 05:00 UTC, instead of 9615
as of last Saturday (Sunday in NZ).

I didn't stick around long enough to get an ID, as they were talking
about the impact of war on veterans, and didn't ID on the half hour.

They don't have facts on PBS or NPR.

This is a great receiver, very sensitive, but had a few problems. I sold mine a couple of years ago, it worked flawlessly, but the tuning knob is very cheap, lightweight and wobbled. The clear LCD covering seemed to be as thin as plastic wrap, so I felt that it might eventually break, and it does not have a lot of bells and whistles that similarly priced sets have. But it seemed to pull in a lot of stations, and the audio was great.

I like listening to NPR at times, but believe me, I have to have the heavy duty
'BS' filter in line.

It is readily apparent whose side they are on in this election.

Upon further analysis, it appears that this station is relaying another China program and is being used as a jammer. This would explain the overmodulated audio being broadcast over another Mandarin-language station, though it could also be a legitimate broadcast of their home service. Not Nei Menguu has I had originally suspected, since no ID was heard to back that up.

The ILG database (public version) had a couple of listings for Chinese jammers on that frequency.

The Chinese have certainly ramped up their transmitter capacity in the last few years, many of them dedicated solely to jamming purposes.

Much as the Russians did in years past.

We have to try to work this out together and stop working against it. The UN is more like a happy dream that practical reality. Just ask a soldier or two who were ordered by the UN to stand by as children were massacred in Rwanda. But not everything we do internationally as a global community is a failure. The WTO is on the right track when it tells countries to eliminate protectionist tariffs and penalty duties. NAFTA is on the right track, so is levelling of trade barriers in Europe, but they are only starts. Everyone must play by the same rules and principles like environmental sustainability, basic human rights have to be enforced b/c profit oriented business won't pay attention to these things. We have to stop the bullying. Can we make a reality? I think we have to. 12 billion of us predicted this century? Most of the growth in the third world? It's only going to get worse if we don't. I think of the people outside the Roman empire who adopted Roman farming methods and had a population explosion. They wanted what the Romans had and then swamped the empire into the dark ages. We have to avoid repeating any sort of parallel. I think it'll come more from within the society via more terror than without from conventional war. But perhaps a terrible mixture.

I've picked up Mexico on MW from Canada. Gotta be patient and keep the dial twirling. Lots of bad signals will fade into audible ones.

Steve, I congratulate you on getting RRI Fak Fak - I'm sure it doesn't come in everyday in Holland Michigan.
Okay, I have not seen Fak Fak logged recently in the U.S. but have seen several logs for RRI Serui, hence my comment.
Also, Guy Atkins in Puyallup, an extremely experienced DXer did not log Fak Fak alongside his Serui log, although he was sure to have tried for it.

You have mentioned before:
> > > I don't think the mountains have a lot to do with it.
but I beg to differ with your opinion. Here in Montagu, my QTH is surrounded by high mountains and long distance DX comes in very rarely compared with say a coastal site or a location on a flat plain. I'm not saying it NEVER comes in, because, of course, my logs show that it does, but that is occasionally. OTOH if I go on a DXpedition to the coast, then the very long distance DX come's in everyday very easily.

It has also been written about in professional radio books and by experienced DXers that long distance DX is very "low angle", which confirms my own experience that high hills and/or mountains blocks out some of the exotic long distance DX signals.

I have been on very many DXpeditions to a wide variety of locations and have formed the opinion that better DX results are obtained if you are in a "bowl" with its opening out towards the path of the TX site you are trying for. This is even more enhanced at the coast if you are in a bay backed by hills or mountains, and the mouth of the bay opens out towards your intended target area. Magical results can be obtained under those circumstances.

Lastly, I receive more far distant DX from areas that have an open path to my QTH, whereas getting Peru from over the Andes is a very rare occurrence. Hence my opinion that mountains block long distance low angle DX signals.

You mean cross posting imbeciles like you.

The Republican convention was very positive. The only negatives were the
reported contrast of the Democratic candidates Senate record. Not much
can be done about that except vote Kerry out of office.

> Microwaves, also known as Super High Frequency (SHF) signals, have wavelengths
> approximately in the range of 30 cm (1 GHz) to 1 mm (300 GHz).

This is a pathetic attempt to avoid the real issue and turn the argument another way to avoid the statement they were unable to dispute.

Saying microwaves magically start at 1000 Mhz, and saying 999 Mhz is not, and 800 Mhz is not, is bullshit talk.

Regardless of where you want to call it, the FACT remains that Microwave Ovens were manufactured that cooked your food with frequencies in the 800 Mhz region.

So, since we can cook food and heat at 800 Mhz, and since cell phones are using the same frequency range, we can make a definite connection here.

Any attempt to shift the discussion to one about where we now want to classify the word "microwaves" to be appropriate is just childish and ignorant, and nothing more than diversion from the point about cell phones being dangerous.

LEGAL exposure to certain RF in Russia can be different than the LEGAL limits in the US. As if RF follows any of these laws, or as if a cell phone is not going to harm you just because you change the definition of what can be legally called microwaves.

What was considered low blood pressure a decade ago, is now being called high blood pressure in an attempt to sell more medication and make more money. Just the AMA changing the imaginary boundary line did not make us all suddenly have high blood pressure, just as your changing what is now considered microwaves has no effect on this issue either.

> ---
> If there's nothing that offends you in your community, then you know you're not
> living in a free society.

If there is nothing that offends you in your community, then you ALSO know you're not living in a dictatorship either.

This is a stupid play on words that is meaningless!

You can NEVER have any society in which nothing offends anyone! Not under ANY government.

Idiots.

> but the tuning
>knob is very cheap, lightweight and wobbled.

You know, during the fall and winter months I carry mine in a backpack wrapped in bubble wrap along with batteries, headphones, wire, an antenna phaser, etc and find that the R30 is quite rugged. It gets hauled around on my back while I mountain bike or hike to secluded DX sites, tugged in and out of the pack ... no problem. I run it off some old rechargable cell phone batteries.

I thought about adding more weight to the tuning knob (solder or lead), but then that's just more mass to haul on my back.

I'll be getting the Palstar MW??? preselector soon (second hand) and will report on it's performance with the R30.

Best DX so far is WDHP, 1620khz US Virgin Islands while using a 700 ft wire on the ground. Sigs were S9 well over the usual US jumble, and I had no overload problems from a local station on 1290khz that was a mere 3 miles away.

Gee, am starting to get pumped for the fall DX season!

He is just simply unable to discern truth from fiction. He's still looking for that PhD he lied about having, and trying to figure out why he was stupid enough to call me on the phone and try and blame me for his 'firing' from Louisville Technical Institute.

He was not fired, a fact that was readily checked by calling Louisville Technical Institute.

Bryant likes to play the victim.

Let's see now. Bush got into Yale because his father was a Yale alumni with big bucks. GW had a C average at Yale and Harvard, the lowest grade you can get there and not fail out. His professors and classmates all recall him as being, at best, a mediocre student with little potential. Yeah, Bush's academic accomplishments are really what you ought to be touting.

You, at one time, tried to tout the fact that you had a PhD. You did not.

I don't recall GWB ever trying to claim a degree he did not have.

You're kinda like Kerry, trying to claim things he did not have, or did not earn.
Typical liberal.

Despite my love of buttons, knobs and switches, this is the radio I most enjoy using(versus Drake SPR-4 and SW-2, JRC NRD-525, and Lowe HF-150). Is it the warm yellowish glow of the analog S-meter and digital frequency display? Maybe a little. But its primary virtue is the clear, intelligible audio it sends to an external speaker. And it's that recoverable audio that this is all about, isn't it? I've read this quality is in large measure a by-product of the exceptionally low phase noise produced by Paul's (owner of Palstar) circuit design.

Would it be nice to have IF shift, IF notch filtering, synchronous detection, ...? Sure, but at what cost? But if Palstar releases a 'super R-30' someone's gonna hafta hide my credit card.

I can't compare the filters, as I have only the one R-30 (with 2 Collins.) I'd suggest you call them and have Paul or an assistant advise you what best fits your needs. I know there are times he's suggested the lower cost ceramics over the Collins. The Muratas he used were two of that company's best models, but are no longer being made. Paul was designing his own as replacements for when his stock finally runs out.

Ken.

Hi John & dxAce,

I didn't try for Fak Fak when I logged Serui because I was concentrating on trans-Pacific MW last week. I was just briefly checking a few of the weaker Indonesian frequencies, like Manggarai on 2960 and Serui.

I note in my logs that I last heard Fak Fak on July 9th at a Grayland DXpedition. Here's the log:

INDONESIA 4790, 1233-1313, RRI Fak Fak Jul 9 Soft lagu romantik tunes in Indonesian, continuous from 1233 tune-in. Powerhouse signal level, but some swisher QRM. No break or announcers at top of hour. Male announcer with ID at 1310, and back into music. (Atkins-WA)

Regarding Serui's frequency, John, I've noted them on 4604.9v lately. However, back at the end of August they were 4606.5.

In my opinion, Steve and John's reception of Serui is more impressive than mine, given your topography and QTH, local noise sources, and antenna limitations you may have. Although my DXing in Puyallup is in the RF "shadow" of strong Seattle/Tacoma broadcasters, my reception is enhanced by:

-Kiwa BCB filter + extension filter for shortwave DXing (*really* helps the RF blocking/desense from the local MW powerhouses)
-underground AC power mains for about 1/2-mile radius from here
-2 Beverage antennas, one "aimed" right at PNG/Irian Jaya
-no horizon blockage
-although I'm about 90 miles inland from the ocean, it's a mostly water path from here to my favorite targets

Ya wanna talk tough DX targets from my location? All of Latin America (not really a region of interest for me though) and Africa (which I'd love to hear more often). African DX is loads of fun on morning longpath, with a southwest Beverage antenna at the coast, around local sunrise. I've had the strongest African signals on the morning longpath. BTW, mid-winter is best for this.

73,

Guy

>Anyone have one of these and do you recommend. It looks like one of the
>old Lowes to me.They were pretty good.Are the C or CC models worth it?

Beats me. I have the R30CC and haven't tried the bare R30. The Collins filters are very sharp, to the point where there are varying degrees of a "whoosh" sound like on a good CW filter. However, the AM-mode Collins filter is supposed to be narrower than the AM-mode Murata filter to begin with--that is, at -6dB as opposed to -60dB--and I'll say that the AM-mode Collins filter is very good at keeping adjacent stations at bay. I find myself tuning +/- 600 Hz to improve the fidelity of a station, which in the end beats not having that wiggle room.

The sad thing is that you have to get both Collins filters in order to get the AM-mode filter. The SSB filters are said to be a lot alike in performance. I simply concluded that I had enough radios with broad filters, and it was time for a change. I didn't expect the filters to be this tight, and it took some time to get fully used to it.

Otherwise, I agree with most of what the other posters have stated. A departure from one post, though: You can get the R30 to overload with a good enough ground and a short enough antenna plugged into the high-impedance jack. That said, the longwire that I used on vacation was something like 330 feet long, and I had no overload problems and excellent mediumwave AM reception. [Shortwave was great, too, but it was my luck that President Reagan died on the first day of my vacation, so I felt the need to do daytime AM DX.] In an area where my Sony ICF-SW7600GR--not a bad AM receiver by any means--could hear only four or five AM stations without a Select-a-Tenna and maybe 70 stations with it, the band was pretty much full on the Palstar.

If there was anything that surprised me about the radio, it was the SP30 speaker that I bought with it, well worth the sixty bucks or so. If I had to do it over again and had to choose between tighter filters and having that speaker, I'm not sure what I would do.

08:15-08:25 UTC, Summer 6100, 3230, 7165

14:15-14:25 UTC, Winter 5005, Summer 3230, 6100,7165

Sounds good, no ???

The problem is, they are only 250 watts. What do you say the chances are
that it can be heard anyplace in North or South or Central America ???

This statement makes it sound like Russia is the good parent and the Chewchnyans are just being nasty. After the thing in Russia, I am surprised that the terrorism isn't worse. The Russians have been beating on Chechnya's citizens as gruesomely as though Uncle Joe were still in power. The American colonies split with England over taxes, for God's sake - what if "the Motherland" were kidnapping your family members without warrants and killing your kin? You'd fight back too - unless you were a miserable coward. I would fight back, even as desperately as the Chechnyans.

I fully agree, the mainstream Muslims have not been as forthcoming as they should about how stupidly violently their extreme elements have been acting. I often wonder if the entire Muslim world is not cracking at the seams and aiming us into WWIII. But even if I were convinced that this were true, it would still be an inescapable fact that impoverished and powerless Muslims in some places in the world are being harrassed to the point where they feel they have no choice. Chechnya is one of those places. Russia should just let them go...keeping them is not worth a gruesome protracted civil guerrila war.

Hi Michael,

My 2003 Passport shows the 5005 frequency at 40 & 100 kW, but the latest Domestic Broadcasting Survey (which I trust more) indicates 5 kw, and ex-100 kW. Hmm... interesting that they dropped their transmitter power dramatically; probably a cost-savings move.

Irregardless of the power, I hear Nepal on 5005 occasionally, although it's never very strong. I've had English on their frequency in the 1415-1425 timeframe, mid-winters. Best reception of Nepal for me has been on DXpeditions to the WA coast.

I see the listing in 2003 Passport for 40 & 100kW. I remember an article that I read on a DX'ing web site... I wish I could remember what it was I saw... It said that Radio Nepal was cutting down their power, possibly going back to how they did in when they first started up... With a small 250 watt transmitter that would only cover Nepal itself. It is possible I misunderstood the article I read. Perhaps they cut back on power, but not all the way down to 250 watts.

I have tried many times to pull it in. I can see that there is a carrier there at times as I use ECSS and I can hear the het as I tune up and down from the zero beat.... I can also hear some very faint (I think) modulation, but I can never hear it enough to ID it. So, I dont even know in fact if the het I'm getting is from Nepal. I want to find out how much juice they are actually using.

Michael

I have them QSL'd here several times on 5005 variable, audible usually in
December thru February or so as I recall.

DX Ace,

Well today John 'ff' Kerry did it.

Had a Photo-Op concerning the 1000th American Service Man
Killed in Iraq.

Bad News for America, is Good News for the John 'ff' Kerry
"Anti-Bush" Propaganda Machine.

John 'ff' Kerry is acting out the 1970's again and turning
his back on our troops while they are at war.

~ RHF

It's Possible Michael:

My guess:
You first need an "open window" to that area;
Check out other transmitters in that or similar part of the continent..
Then
You need a quiet, quiet frequency and lots of antenna;
& a good receiver helps...

Dan / NYC

Source record: 242

http://www.miami.com/mld/miamiherald/9584265.htm

Graham book: Inquiry into 9/11, Saudi ties blocked
WASHINGTON - Two of the Sept. 11, 2001, hijackers had a support network in the United States that included agents of the Saudi government, and the Bush administration and FBI blocked a congressional investigation into that relationship, Sen. Bob Graham wrote in a book to be released Tuesday.

The discovery of the financial backing of the two hijackers ''would draw a direct line between the terrorists and the government of Saudi Arabia, and trigger an attempted coverup by the Bush administration,'' the Florida Democrat wrote.

And in Graham's book, Intelligence Matters, obtained by The Herald Saturday, he makes clear that some details of that financial support from Saudi Arabia were in the 27 pages of the congressional inquiry's final report that were blocked from release by the administration, despite the pleas of leaders of both parties on the House and Senate intelligence committees.

Graham also revealed that Gen. Tommy Franks told him on Feb. 19, 2002, just four months after the invasion of Afghanistan, that many important resources -- including the Predator drone aircraft crucial to the search for Osama bin Laden and al Qaeda leaders -- were being shifted to prepare for a war against Iraq.

You'd be best to look for them in Nepali rather than English unless you are on the west coast... they are on earlier than that in Nepali.

Yo Radio Nepal Ho

200. Leroy punks out...tries to hide. WAS Re: (OT) Most Muslims are de facto terrorists

Newsgroup: rec.radio.shortwave
Date: 2004-09-08 02:59:57 UTC
From: Honus <honus1@earthlink.net.is.invalid>
Message-ID: <NAu%c.9394$x12.8012@trnddc05>
Source record: 248

Leroy, Leroy...you disappoint me.

I assume that anyone who tried to respond to this latest puke from Leroy noticed it themselves, but he altered the headers so that any responses to his post go to alt.test only. They'll never show up in r.r.s. And now that I look further, he did that to the other post that I see from him. I'm going to do a bit of research and see if I can determine if this Leroy is a newcomer to the group, or a regular user. For his sake, I hope he's new. And FWIW, I'll out him if I turn up anything.

Really, Leroy. Such a juvenile trick!

I should have seen it coming.

And now, the post that Leroy won't have to look in alt.test for:

"Leroy" <ljones23@no.spam> wrote in message

> business and is totally irrelevant to the topic. You were stupid to
> even bring it up.

First of all, he didn't bring it up. I did. Do you need a scorecard to keep up with who's busting your chops?

Actually, on reflection -you- brought it up when you said that all terrorists were Muslims...and then when you tried to qualify your statement (or back pedaled) and said that all -international- terrorists were Muslims. Either way, you're wrong. Wow...there's a surprise.

Why don't you visit this link, and educate yourself? You're
obviously -capable- of reading...how about comprehending?

http://www.infoplease.com/spot/terrorism7.html#greece

"In August 2001, Colombian police arrested four members of the Irish
Republican Army (IRA) who were visiting facilities operated by the
Revolutionary Armed Forces of Colombia (FARC). One of the IRA members was
reportedly teaching English to terrorists at a FARC camp, while the others
had apparently been showing the Colombians how to manufacture gasoline
bombs. One of those arrested, Niall Connally, is said to be the IRA's chief
operative in Latin America, coordinating terrorist operations from Cuba."

Gosh. That's only three years ago. And those arrests didn't crush their
organizations in Ireland, Colombia or Cuba, so I feel safe in assuming that
they're still in business despite your feeble protestations to the contrary.
And the article is about the Irish (Sinn Fein) in Colombia and Cuba; I'd say
that qualifies as international. And you don't see too many red-headed
whiskey drinking Muslims these days, if I may be excused the stereo-type to
illustrate my point. So...not all international terrorists are Muslims.

Want some salt with that crow?

No, of course not. You still think that you're right.

Oh, as for tellimg me that I was stupid to bring up the IRA? Oh, never mind.
I've proven my point. I'm right, you're wrong. Period, end of story. I'm
betting that you won't/can't admit it.

> Brains are not your long suit, pantywaist. Into the kill file you go.
> <PLONK>

Again, I think that it's -me- that you want to kill file, thus
showing -your- lack of mental acuity. (Not to mention your inability to
defend your position, which is of course understandable since it's
indefensible.) You can't even keep up with this thread, much less matters
international in scope. But either way, if you kill file everyone that
disagrees with you you're going to be the only playing on Usenet...at least
as far as you can tell. Things will probably get pretty boring when the only
posts you see are ones that you made yourself. Why waste time? Just leave
Usenet all together. Really, you're nowhere near as fun as I thought you'd
be.

Actually, when push comes to shove I don't believe that you're plonking
anyone. You're just saying that, and then altering headers so that you can
claim never to have seen the posts that show you for the mistaken person
that you are. Bad Leroy! Bad! Bad!

Come on, confess...you're trolling, right? Admit it, Leroy, even if it's not
true. It's your only way to save even a scrap of credibility.

> and our customers. Of course, my argument was still right... that too many
> commercials is an incredible turnoff factor for listeners, and if people
> don't listen, no one hears the spots.

No shit. And if you have too many spots, all you have to do is double the price. Half of the advertisers will drop, the other half will pay their share, and you just cut half of the spots from your station. So simple, yet many are too afraid to turn down any advertiser to do it. We did it and it works just fine. Better to turn away advertisers than listeners! If you have listeners, you will always have advertisers, but you don't get listeners from having more advertisers, you get LESS listeners.

> Now that I am a listener, I am one of the first to turn away from a station
> that plays too many spots, especially if the spots are totally uncreative,
> boring and repetitive.

This is the problem with those in radio management, they never just ask themselves what THEY would listen to. All you had to do is ask the DJs what they thought, as they are the ones that listen to the station longer than anyone. If they get sick of a song or spot, it means time to drop it!

> Sometimes stations play the same spot twice during a
> single set! How effective can that be to that customer?

I never understood that. If I was the advertiser, I would much rather have had the extra spot play in another hour or on another station than waste two in the same break. Besides, it pisses listeners off, and doing that means people will remember to NOT buy your product, just as they never buy from companies that send spam or telemarket.

> Radio has become ridiculously redundant.

Haven't been able to listen to it in many years.

Three things:

1) You need to recheck the frequency of the magnetrons in microwave
ovens.
2) You need to recompare the power levels between microwave ovens and
cell phones (*cough* 0.3 W v. 1500 W, a factor of 5000 difference
cough)
3) *Plonk*

Wow, someone else finally figured this out. Good for you. People I would explain this simple logic to, would be too afraid to try it because they never want to lose any advertiser and would rather have lots of advertisers and spots and low pay, than a few advertisers paying a lot more.

Problem is, if you are programming shit, you can only charge $5 a spot.

FIRST you get good programming. THEN you have a small sales staff of 3 or 4 people to handle incoming calls from Budweiser, McDonalds, etc. If you have to go out and get advertisers, then your programming sucks.

> and see if you find anything like it.

Triple conversion Ten Tec 320, so it's most likely not an image. The
sound at 4790 is about half the speed and evenly spaced (like the'Pip'
sound from that web page.

. The sound at 5700 seems to go for about 12 or 13 bursts, then a single
different sound. It then repeats.

it doesn't match any of these, either.

http://www.wunclub.com/sounds/index.html

It sounds like a frog on amphetamines(1) croaking very quickly, then
spitting out the bug and repeating the sequence.

(1) found mainly in the Pond behind dxAce's shack

Message-ID: <chm173shn1@ctb-nnrp2.saix.net>
Source record: 166

Hi Guy,
You raise two points of interest.
One is that it is a fairly regular feature of S. African DXing for us to get N. American MW stations, but it seems very difficult indeed for U.S. MW DXer's to get the 100 Kw powerhouse omnidirectional TX's that we have here in S. Africa in the U.S.A. Even Mark Connelly on the East coast and a Canadian DXer up in Nova Scotia seem to have great difficulty.

The Canadian fellow achieved what for me must be the ultimate DX catch in Nova Scotia -> he claims to have got our 100 Kw R. 702. Now this TX has a very effective antenna system beamed only to the South West, so the signal to him could only have been long path - an astounding 17,000 miles away. If you go just North of the 702 TX you will get BBC on 702 from Europe. Since this path lies near Grayland, you might like to try for that when conditions are next good???

Also, I have a good friend in France who DX's NDB beacons on LW and he has also commented that European DXer's seem to get more N. American catches than Americans getting Europe. Go figure.....

Second, your experience is that your best most exotic DX is caught in mid winter. My experience down here is that the equinox - around 21st March and 21st September have given me markedly better results than any other time. That applies both to my home QTH and various DXpeditions.

There are some other anomalies too - Although getting U.S. East coast and Brazil here are fairly common, getting Mexico and Central America is so rare as to be an occasion to break out a bottle of champagne if you ever get one..... Also, even though Brazilian catches are common here, right down to the very South of the country, Argentina, right next door, hardly ever comes in. I really have no logical explanation for this.

Pantywaist? PC? Wow...those are ones I've never been called before. I'm PC
because I don't agree with your genocidal views? Well then...so be it. It
beats the hell out of being what -you- are. And again, not all international
terrorists are Muslims. I pretty much beat the hell out of that one in my
response to another one of your posts.

> > not all Muslims are terrorists. All trees are plants, but not all plants
are
> > trees. Get it?
>
> The majority of Muslims, along with their terrorist TV network, Al
> Jazeera, support and even revel in terrorism.

You don't know that. And even if it were true that the -majority- of them
support it, does that justify killing them -all- as you so eloquently
advocated doing? Again, kill 'em all and let God sort 'em out. Even the
kids. Unless you want to run the adoption service?

> To sympathize with or
> to support terrorists is to participate in terrorism.

I won't argue that one. So we put a bullet in their heads as well.
We -don't- turn the region into one big sheet of radioactive glass. That's

what the terrorists would do.

> It is the same
> as the Germans who sat back and let Naziism run rampant over their
> country: They share guilt with the Nazis because of their inaction.
> Today's German government fully accepts that premise.

That's crap. It's a demonstrable fact that any number of German citizens weren't entirely aware of what was-really- going on, and by the time they -were- aware of it it was too late to do much about it. Oh, except for the one's that helped hide Jews, tried to kill Hitler, helped Allied airmen back across the lines, etc. You say it's the same. That means that you think we should have killed them all as well. So why did you snip out my comment about killing all of those dirty little Japs, huh? There's no difference there, either. Odd...when I make a point you snip it. When you make the same point, you consider it a valid one.

> > False premise. Muslims -do- condemn the terrorists. Maybe not as vocally as
>
> Middle Eastern Muslims DO NOT condemn terrorists. Asian Muslims DO
> NOT condemn terrorists. Read the latest worries on their news sites
> that they now may pay a heavy price for their inaction.

Read again what I wrote, which you snipped and ignored, and you'll see why you're wrong. By the way, Leroy...snipping without noting the fact is bad form on Usenet. And it really makes you look like you can't address the points that you snipped away. If you'd like, I can give you a URL (or twenty) that deal with what we call "netiquette". You'd find it useful; it helps you play better with others.

> > I don't hear a lot of Christians jumping up and down whenever one of -their-
> > fundamentalists whacks an abortion doctor. Eric Rudolph hid<*STOMP*>
>
> The subject was not Christians, pantywaist. It was international
> terrorism.

Which includes Sinn Fein, as I pointed out in that other post to which I alluded earlier. And since it includes the IRA, then it includes international terrorists. And Christians. Unless you don't think Catholics are Christians, which wouldn't really surprise me. Even though you (stupidly, I must say) quote one as a sig file.

> All international terrorists are Muslims. <spit>
>
> You PC types have gone too far and now stick your heads into the sand
> instead of facing up to reality. This is WAR, pantywaist, and your
> insistence that everybody make everyone else feel good is a real
> DANGER to the rest of us. It prevents us from seeing the truth of the
> situation. Russia now realizes they were too soft terrorists, and the
> rest of the world must do the same.

Actually, I support the war in Iraq, simply because they weren't complying with the terms of surrender from the first Gulf War. And I've been complaining at the top of my voice to anyone within earshot for -years- that we're too soft on terrorists. I'd have supported attacks on Libya, for example, for not handing over the terrorists that blew up the airliner over Lockerbie. We had the JFK sitting right off-shore, IIRC. A tomahawk a day might have done the trick.

Your mischaracterization of me as some kind of liberal wuss is WAY off the mark. That was my favorite thing about Reagan...mess with the bull and you got the horns. See? WAY off.

By the way...name calling, or ad hominem, is bad form. Some people even consider the fight to be won when the other side resorts to mere name-calling, like some over-grown adolescent. If you like, I can give you a URL that explains the phrase "ad hominem". And since you started it, I'll feel free to respond in kind when I feel the urge. :)

> If terrorists could get their hands on nuclear weapons, they'd use
> them against us in a heartbeat.

I think I implied that in my post. You know...the one that you snipped all to hell. The one that made your position look even more idiotic than you were able to do yourself.

> We HAVE nuclear weapons, and I say
> that we use them on the Muslim terrorists first.

No, that's NOT what you said. You said death to them all, and you clearly meant all Muslims. So...whacked anyone in your neighborhood lately? By the way...someone asked you for some evidence to support your claim that Russia was considering the use of nukes. The crickets are getting kind of loud in here.

The thing that really gets me is this: you're all torn up over the Russian school children, as is everyone of my acquaintance that I've spoken of it with, and myself as well. Your solution? "Kill all the Muslims". This, of course, means the -children- of the Muslims as well. After all, as we used to say regarding the Indians, nits make lice. That means that the little ones grow up to be big ones. (There...I brought up Indians. But I'm still not PC, because I don't call them Native Americans. I hope you're not too disappointed, Leroy.) And how shall we kill these children? Nukes from a distance? Or can we line them up, and put bullets in their heads? Will you fire the first shot? The third? The 10,000th? I'll bet not. I hope not. And just because I -know- that you're not getting the subtle point that I'm trying to make here, I'll spell it out for you. Advocating the killing of them all makes you exactly the same as the terrorists that killed those kids. I'll bet my left nut that you lie in bed at night thinking what a great American patriot you are, and what a soft liberal commie Muslim-loving bastard Honus is. (Get it? -Lie- in bed.) Hear this: you are EXACTLY the same as those terrorists that took over the school. You flat out advocated killing countless thousands of innocent people based on your profound ingorance and unwillingness to actually examine the facts of the matter, and

in your haste to barf all over the group you paid no attention whatsoever to the sentiment behind your words, which I would (and have) characterized as "kill them all and let God sort them out". That makes you the flip side of the terrorist coin. (Miss the Crusades, do you?) On top of that, when it's clearly shown that you're wrong, you just plow right ahead, unwilling to be man enough to concede any error. You're one of those "patriots" that takes pot shots at the local mosque when he's had a little too much malt liquor. You're one of those God-fearing Americans that leaves non-descript "packages" on their doorsteps, and then sits back and laughs all the while not even thinking about the impact that your actions have on the rest of us; or the fact that your anger is horribly misdirected. It wouldn't surprise me a bit to learn that you (or your actions) made the local news right after 9/11. You're just the sort that our police and volunteers wasted so much time protecting the local Muslims and mosques from. I could easily go on, but what's the point? I'll just sum up my thoughts in a few words.

My shit is more patriotic than you.

> They are barbarians
> who never left the 13th century, and it is time they are exterminated.

Boy...it's a good thing that no one was around to nuke -us- back when -we- living in the 13th century. I say we kill everyone that doesn't have electricity. Of course, I suspect that means that 90% of your family in the hills is gonna get it. ;)

> "Mohammed said that he was sent in the power of his arms which are

> Chapter 6

I can quote Aquinas too, although I usually have to brush my teeth afterwards.

"Most men seem to live according to sense rather than reason."

"Reason in man is rather like God in the world."

"The Jews should not be allowed to keep what they have obtained from others by usury; it were best that they were compelled to work so that they could earn their living instead of doing nothing but becoming more avaricious."

You do realize, don't you, that Aquinas was an anti-semite? I'm laughing my ass off right now. At you. Do you ever feel like you're walking around with a bullseye on your chest? You're an easy mark.

Coming in faintly here. Morse only, so far
The code doesn't match what is shown above.

It's more like:

-.-- -.-- ------------ <<very long single dash

Not 100 percent sure though. there is some code in the background, very
faint which I can't make out.

Microwave ovens use a frequency of around 2.45 GHz, much higher than the 800 MHz cellphones, however close to the 2.5 GHz cordless phones. It's not necessarily the frequency that one should be concerned about, but rather the relative RF power density levels produced by each device and its proximity to biological systems. Because cell phones/cordless phones emit such a small power density levels, there is no observable biological effect, i.e. heating tissue. Microwave ovens on the other hand are purposefully designed to heat media in via HUGH amounts of RF deposition in the oven chamber via more than 1000 watts.

The distinction between a cordless phone/cellular phone and a microwave oven can not be more clear. It like a match stick burning at a distance of several feet and a roaring fireplace fire at the same distance...one will not have any effect on you, the other will certainly warm your skin. Its as simple as that.

Bruce.

Anyone know the answer to the following?

1. Where can get a replacement teledcopic antenna for the RF2200? (I am using a rough equivalent - very rough - from Radio Shack, and would like to get back to original)

2. Any tips on repairingthe gyro-antenna so that it pops up and locks in place like it did when new?

Thanks,

Jose

Microwave ovens use a frequency of around 2.45 GHz, not 800 MHz like cellphones, however close to the 2.5 GHz cordless phones. It's not necessarily the frequency that one should be concerned about, but rather the relative RF power density levels produced by each device and its proximity to biological systems. Because cell phones/cordless phones emit such a small power density levels, there is no observable biological effect, i.e. heating tissue. Microwave ovens on the other hand are purposefully designed to heat media in via HUGH amounts of RF deposition in the oven chamber via more than 1000 watts. It takes hugh amounts of RF to heat tissue because the effect is so inefficient being we are mostly water. Long chain molecues are more efficient at absorbing RF, but again it takes very large amounts of RF to produce any heating effect from friction caused by vibrating the long chain molecules together.

The distinction between a cordless phone/cellular phone and a microwave oven cannot be more clear. It like a match stick burning at a distance of several feet and a roaring fireplace fire at the same distance...one will not have any effect on you, the other will certainly warm your skin. Its as simple as that.

Bruce.

Well, the propagation generators were down for maintenance for a while
but they are back up and running now so propagation should be good.

I thought to myself, haven't I heard this story already? Isn't a year old?

So I went to that page's source code, where I read:

"<!-- Published on Friday July 26, 7:51am ET using feature.t -->"

Then I went to
http://www.earth.com/calendar?7%2F2002

The last Friday, July 26, was in the year 2002.

This story is two years old.

Hey, there has to be one.

Is there a Voice of Chechnya? I know how to find the Voice of Russia,
but do the Chechnyans have a radio station too?

KS,

The math is simple.

20,000 Terrorist who are willing to die and unlimited 'soft'
targets here in the USofA and so called American Interest
over seas.

They (the Terorist) only have to be right once to create an act
of Terror. The USofA has to be right 100% of the time.

Examples are the recent Terrorist Acts in Russia.

As to your 'reply': The Argument has nothing to do with my
intellect; but your above statements clearly demostrate yours [.]

The AA has an actual knob for volume and switches on the top, the AAA has an
increase/decrease button and switches on the back.

They both sound the same to me.

At present they seem to have 3 100 kw transmitters, an older Passport suggests they may be running at 40 kw at times. I'm not even sure if they run more than one at a time these days.

Passport should list a few email addresses, you might contact them to inquire.

Hearing both RRI Serui (4604.9) and Fak Fak (4789.95) here this morning at 1200. Fak Fak has Serui beat by a little, and propagation does not seem to be as good as it was yesterday morning.

Also have a weak signal from presumed Makassar on 4749.93.

He wanted to ban shotguns? I heard he had sponsored legislation to ban
assault rifles, but I wasn't aware he was against shotguns. Tell me more.

Here's a link to the bill:

<http://www.congress.gov/cgi-bin/query/z?c108:S.1431:>

Apparently the shotgun he was given is a semi-automatic, and the grip
meets the definition of a pistol grip as defined in the bill.

Friends The Bin Ladens and the Saudi Royal Family
> Bush supporters ,Please try to spin this away
> ----------
> http://edition.cnn.com/2004/WORLD/europe/09/07/russia.school.0900/
> Putin: Why talk to child killers?
>
> BESLAN, Russia (CNN) -- Vladimir Putin has criticized Western leaders in
the wake of the school siege tragedy for urging Russia to negotiate with
Chechen rebels, whom he likened to al Qaeda chief Osama bin Laden.
>
> The Russian president was reacting to criticism by some foreign leaders of
the handling of the crisis in the North Ossettian town of Beslan in which at
least 338 died -- half of them children.
>
> Speaking on behalf of the EU, Dutch Foreign Minister Ben Bot had said it
was "very difficult to judge from a distance whether the right decision was
taken" when special forces stormed the school, in which militants had seized
hundreds of children and adults.
>
> Putin likened demands by Washington that Moscow negotiate with the
separatists in Chechnya -- where rebels are believed to have planned the
school siege -- to the U.S. talking to the terrorists behind the September
11, 2001 attacks.
>
> These are not "freedom fighters," Putin said. "Would you talk with Osama
Bin Laden?" he asked. Putin said the Chechen separatists are trying to
ignite ethnic tensions in the former Soviet Union and it could have severe
repercussions. (Full story)
>
> "Why don't you meet Osama bin Laden, invite him to Brussels or to the
White House and engage in talks, ask him what he wants and give it to him so
he leaves you in peace?" the Russian president was quoted as saying by
Britain's Guardian newspaper on Tuesday.
>

> "You find it possible to set some limitations in your dealings with these bastards, so why should we talk to people who are child-killers?" said Putin, who spoke to a group of foreign journalists and academics late on Monday.
>
> Meanwhile, in London, British Prime Minister Tony Blair said he had phoned Russian President Vladimir Putin to express "sympathy and horror" over the attack in the southern Russian town of Beslan. (Full story)
>
> Blair was speaking as Russia held a second national day of mourning after nearly 200 children and other victims were laid to rest in Beslan.
>
> The small community faces another day of multiple funerals as gravediggers have been told to prepare for as many as 600 burials overall.
>
> Tens of thousands of people are expected to attend a march in Moscow to voice the country's revulsion at the recent string of terror attacks.
>
> As flags flew at half-staff across the country there was a small rally in the capital of Chechnya. A suspect has said the hostage-takers were told their goal was to "start a war across the Caucasus."
>
> Appearing on state television, the unidentified man said the attack was ordered by Chechen rebel leader Aslan Maskhadov and warlord Shamil Basayev, who have been fighting Russia for independence for a decade.
>
> Ten of the dead hostage-takers were from Arab countries, authorities have said. Twenty-six hostage-takers and 10 Russian special forces died in the siege.
>
> The suspect earlier had said he did not fire a shot inside the school and that he "pitied the children" who were taken captive. Few other details were released about the suspect.
>
> In Beslan, the sound of shrieking mothers pierced the air on Monday as thousands of mourners gathered in a muddy field.
>
> "We pray for the souls of the innocents who were killed," said one priest. "May they rest in peace."
>
> Lines and lines gathered in the field set aside for burials, as family members clutched pictures of their loved ones.
>
> "As parents, we should die before our kids. But I have seen my daughter's death," said Murat, a father whose daughter, Allana, 15, was killed with most of her classmates.
>
> "Now, our home feels cold. There are many homes like this in Beslan."
>

> Zinaida Kudziyeva, 42, and her 10-year-old daughter, Madina had tried to flee when the first explosions went off and were caught in the crossfire between militants and Russian forces, relatives said.
>
> "They couldn't run away. They didn't have time," The Associated Press quoted Irakly Khosulev, a relative from the nearby city of Vladikavkaz, as saying. "Someone should answer for this."
>
> Hundreds remain missing and in some cases entire families were murdered.
>
> At a makeshift morgue where bodies are covered by plastic sheets, those looking for loved ones wear masks because the stench is overwhelming.
>
> The bodies are often charred beyond recognition, and relatives have been searching for rings or other jewelry that might help to identify them.
>
> Of the more than 700 people who needed medical help after the crisis, 411 remained hospitalized on Monday -- 214 of them children, the North Ossetian health ministry told AP.
>
> Of the most badly injured, 23 were in Moscow and 11 in the southern city of Rostov-on-Don.
>
> Residents, politicians and even Russian state television have raised questions about the massacre.
>
> "At such moments, society needs the truth," Rossiya television commentator Sergei Brilyov was quoted by AP as saying.
>
> Brilyov blamed the "system of administration," where "everything hangs on the bravery of the rank and file, but generals can't bring themselves to act until the president throws ideas to them."
>
> His criticism -- which AP suggested was sanctioned by the Kremlin -- stopped short of Putin, who also criticized Russia's law enforcement agencies in a weekend speech to the nation.
>
> The Interfax news agency said two politicians -- liberal Irina Khakamada and nationalist Sergei Glazyev -- have issued separate calls for an independent investigation into the crisis.
>
> Other politicians directed their criticism at Putin himself.
>
> "The official claim that international terrorism is behind the Beslan tragedy is a trick designed to divert responsibility away from the Kremlin," liberal Boris Nemtsov told Reuters.
>
> Officials have appealed for calm in the volatile Caucasus region, which includes Chechnya, Ingushetia and North Ossetia, where the attack took

place.
>
>
>

Good comeback Drakeman.
The second link just reiterated what Telemon posted. It also asserted that Kerry doesn't know how to handle a firearm. Let's get real. Anyone who served in the military knows how to handle a firearm. But I did put on my rubber gloves, held my nose, and went to the Drudge link (what a friggin skank!). And, sure enough, it is (apparently) true. That shotgun Kerry received technically has a pistol grip. Who woulda thunk? Not me. Looks like a sloppy mistake on Kerry's part. I know there was a lot of talk about banning "Street Sweeper" type shotguns that had a pistol grip (there I go again!) with no stock and a high capacity magazine, useful when drug deals go bad but not much of a sportsman's firearm. Kerry prob thought that's what he was legislating against. I really, seriously, don't believe Kerry wanted to ban all smemi-auto shotguns.

It's like the popular myth that he wanted to stop development of the Apache helicopter. He did speak about that in an interview but never sponsored or backed legislation to do so, unlike Dick Cheney.

Not necessarily. It would appear that Kerry is kind of a klutz. He did apparently
wound himself several times.

I've had the pleasure of meeting many officers who didn't know jack shit about
much of anything at all.

Well, you did mention 'sloppy mistake'... I think that defines Kerry fairly well.

I think it's WAY too late to reverse the direction we're heading, and there's a lot more that can be said here, but it's important for you to know the facts before you lose what you had.

Please ... read on.

How Tyranny Came to America
==========
One of the great goals of education is to initiate the young into the conversation of their ancestors; to enable them to understand the language of that conversation, in all its subtlety, and maybe even, in their maturity, to add to it some wisdom of their own.
The modern American educational system no longer teaches us the political language of our ancestors. In fact our schooling helps widen the gulf of time between our ancestors and ourselves, because much of what we are taught in the name of civics, political science, or American history is really modern liberal propaganda.
Sometimes this is deliberate. Worse yet, sometimes it isn't. Our ancestral voices have come to sound alien to us, and therefore our own moral and political language is impoverished. It's as if the people of England could no longer understand Shakespeare, or Germans couldn't comprehend Mozart and Beethoven.
So to most Americans, even those who feel oppressed by what they call big government,ï¿½it must sound strange to hear it said, in the past tense, that tyranny "came" to America. After all, we have a constitution, don't we?
We've abolished slavery and segregation. We won two world wars and the Cold War. We still congratulate ourselves before every ballgame on being the Land of the Free. And we aren't ruled by some fanatic with a funny mustache who likes big parades with thousands of soldiers goose-stepping past huge pictures of himself.
For all that, we no longer fully have what our ancestors, who framed and ratified our Constitution, thought of as freedom ï¿½ a careful division of power that prevents power from becoming concentrated and unlimited.
The word they usually used for concentrated power was consolidatedï¿½ï¿½ a rough synonym for fascist. And the words they used for any excessive powers claimed or exercised by the state were usurpedï¿½and tyrannical. They would consider the modern "liberal" state tyrannical in principle; they would see in it not the opposite of the fascist, communist, and socialist states, but their sister.
If Washington and Jefferson, Madison, and Hamilton could come back, the first thing they'd notice would be that the federal government now routinely assumes thousands of powers never assigned to it ï¿½ powers never granted, never delegated,ï¿½never enumerated.

These were the words they used, and it's a good idea for us to learn their language.
They would say that we no longer live under the Constitution they wrote. And the Americans of a much later era ï¿½ the period from Cleveland to Coolidge, for example ï¿½ would say we no longer live even under the Constitution they inherited and amended.
I call the present system "Postï¿½Constitutional America." As I sometimes put it, the U.S. Constitution poses no serious threat to our form of government.
What's worse is that our constitutional illiteracy cuts us off from our own national heritage. And so our politics degenerates into increasingly bitter and unprincipled quarrels about who is going to bear the burdens of war and welfare.
I don't want to sound like an oracle on this subject. As a typical victim of modern public education and a disinformed citizen of this media-ridden country, I took a long time ï¿½ an embarrassingly long time ï¿½ to learn what I'm passing on.
It was like studying geometry in old age, and discovering how simple the basic principles of space really are. It was the old story: In order to learn, first I had to unlearn.
Most of what I'd been taught and told about the Constitution was misguided or even false. And I'd never been told some of the most elementary things, which would have saved me a tremendous amount of confusion.
The Constitution does two things.
First, it delegates certain enumerated powers to the federal government. Second, it separates those powers among the three branches.
Most people understand the secondary principle of the separation of powers. But they don't grasp the primary idea of delegated and enumerated powers.
Consider this. We have recently had a big national debate over national health care. Advocates and opponents argued long and loud over whether it could work, what was fair, how to pay for it, and so forth.
But almost nobody raised the basic issue: Where does the federal government get the power to legislate in this area? The answer is: NOWHERE.
The Constitution lists 18 specific legislative powers of Congress, and not a one of them covers national health care.
As a matter of fact, none of the delegated powers of Congress ï¿½ and delegatedï¿½is always the key word ï¿½ covers Social Security, or Medicaid, or Medicare, or federal aid to education, or most of what are now miscalled "civil rights," or countless public works projects, or equally countless regulations of business, large and small, or the space program, or farm subsidies, or research grants, or subsidies to the arts and humanities, or ... well, you name it, chances are, it's unconstitutional.
Even the most cynical opponents of the Constitution would be dumbfounded to learn that the federal government now tells us where we

can smoke. We are less free, more heavily taxed, and worse governed than our ancestors under British rule. Sometimes this government makes me wonder: Was George III really all that bad?
Let's be clear about one thing.
Constitutionali¿½and unconstitutionali¿½aren't just simple terms of approval and disapproval. A bad law may be perfectly constitutional. A wise and humane law may be unconstitutional. But what is almost certainly bad is a constant disposition to thwart or disregard the Constitution.
It's not just a matter of what is sometimes called the "original intent" of the authors of the Constitution. What really matters is the common, explicit, unchallenged understanding of the Constitution, on all sides, over several generations. There was no mystery about it. The logic of the Constitution was so elegantly simple that a foreign observer could explain it to his countrymen in two sentences.
Alexis de Tocqueville wrote that "the attributes of the federal government were carefully defined [in the Constitution], and all that was not included among them was declared to remain to the governments of the individual states. Thus the government of the states remained the rule, and that of the federal government the exception".
The Declaration of Independence, which underlies the Constitution, holds that the rights of the people come from God, and that the powers of the government come from the people.
Let me repeat that: According to the Declaration of Independence, the rights of the people come from God, and the powers of the government come from the people. Unless you grasp this basic order of things, you'll have a hard time understanding the Constitution.
The Constitution was the instrument by which the American people granted, or delegated, certain specific powers to the federal government. Any power not delegated was withheld, or "reserved".
As we'll see later, these principles are expressed particularly in the Ninth and Tenth Amendments, two crucial but neglected provisions of the Constitution. Let me say it yet again: The rights of the people come from God. The powers of government come from the people.
The American people delegated the specific powers they wanted the federal government to have through the Constitution. Any additional powers they wanted to grant were supposed to be added by amendment.
It's largely because we've forgotten these simple principles that the country is in so much trouble. The powers of the federal government have multiplied madly, with only the vaguest justifications and on the most slippery pretexts.
Its chief business now is not defending our rights but taking and redistributing our wealth. It has even created its own economy, the tax economy, which is parasitical on the basic and productive voluntary economy.
Even much of what passes for "national defense" is a kind of hidden entitlement program, as was illustrated when President George Bush warned some states during the 1992 campaign that Bill Clinton would destroy jobs by closing down military bases.
Well, if those bases aren't necessary for our defense, they should be

closed down.
Now of course nobody in American politics, not even the most fanatical liberal, will admit openly that he doesn't care what the Constitution says and isn't going to let it interfere with his agenda.
Everyone professes to respect it ï¿½ even the Supreme Court. That's the problem. The U.S. Constitution serves the same function as the British royal family: it offers a comforting symbol of tradition and continuity, thereby masking a radical change in the actual system of power.
So the people who mean to do without the Constitution have come up with a slogan to keep up appearances: they say the Constitution is a "living document", which sounds like a compliment.
They say it has "evolved" in response to "changing circumstances," etc. They sneer at the idea that such a mystic document could still have the same meanings it had two centuries ago, or even, I guess, sixty years ago, just before the evolutionary process started accelerating with fantastic velocity.
These people, who tend with suspicious consistency to be liberals, have discovered that the Constitution, whatever it may have meant in the past, now means ï¿½ again, with suspicious consistency ï¿½ whatever suits their present convenience.
Do liberals want big federal entitlement programs? Lo, the Interstate Commerce Clause turns out to mean that the big federal programs are constitutional!
Do liberals oppose capital punishment? Lo, the ban on "cruel and unusual punishment" turns out to mean that capital punishment is unconstitutional!
Do liberals want abortion on demand? Lo, the Ninth and Fourteenth Amendments, plus their emanations and penumbras, turn out to mean that abortion is nothing less than a woman's constitutional right!
Can all this be blind evolution? If liberals were more religious, they might suspect the hand of Providence behind it! This marvelous "living document" never seems to impede the liberal agenda in any way.
On the contrary: it always seems to demand, by a wonderful coincidence, just what liberals are prescribing on other grounds.
Take abortion. Set aside your own views and feelings about it. Is it really possible that, as the Supreme Court in effect said, all the abortion laws of all 50 states ï¿½ no matter how restrictive, no matter how permissive ï¿½ had always been unconstitutional?
Not only that, but no previous Court, no justice on any Court in all our history ï¿½ not Marshall, not Story, not Taney, not Holmes, not Hughes, not Frankfurter, not even Warren ï¿½ had ever been recorded as doubting the constitutionality of those laws. Everyone had always taken it for granted that the states had every right to enact them.
Are we supposed to believe, in all seriousness, that the Court's ruling in Roe v. Wadeï¿½was a response to the text of the Constitution, the discernment of a meaning that had eluded all its predecessors, rather than an enactment of the current liberal agenda? Come now.
And notice that the parts of this "living document" don't develop equally or consistently. The Court has expanded the meaning of some of

liberalism's pet rights, such as freedom of speech, to absurd lengths; but it has neglected or even contracted other rights, such as property rights, which liberalism is hostile to.
In order to appreciate what has happened, you have to stand back from all the details and look at the outline. What follows is a thumbnail history of the Constitution.
In the beginning the states were independent and sovereign. That is why they were called "states": a state was not yet thought of as a mere subdivision of a larger unit, as is the case now.
The universal understanding was that in ratifying the Constitution, the 13 states yielded a very little of their sovereignty, but kept most of it.
Those who were reluctant to ratify generally didn't object to the powers the Constitution delegated to the federal government. But they were suspicious: they wanted assurance that if those few powers were granted, other powers, never granted, wouldn't be seized too.
In The Federalist,ï¿½Hamilton and Madison argued at some length that under the proposed distribution of power the federal government would never be able to "usurp", as they put it, those other powers.
Madison wrote soothingly in Federalist No. 45 that the powers of the federal government would be "few and defined," relating mostly to war and foreign policy, while those remaining with the states would be "numerous and indefinite", and would have to do with the everyday domestic life of the country.
The word usurpationï¿½occurs numberless times in the ratification debates, reflecting the chief anxiety the champions of the Constitution had to allay. And as a final assurance, the Tenth Amendment stipulated that the powers not "delegated" to the federal government were "reserved" to the separate states and to the people.
But this wasn't enough to satisfy everyone.
Well-grounded fears persisted. And during the first half of the nineteenth century, nearly every president, in his inaugural message, felt it appropriate to renew the promise that the powers of the federal government would not be exceeded, nor the reserved powers of the states transgressed.
The federal government was to remain truly federal, with only a few specified powers, rather than "consolidated" with unlimited powers.
The Civil War, or the War Between the States if you like, resulted from the suspicion that the North meant to use the power of the Union to destroy the sovereignty of the Southern states.
Whether or not that suspicion was justified, the war itself produced that very result. The South was subjugated and occupied like a conquered country. Its institutions were profoundly remade by the federal government; the United States of America was taking on the character of an extensive, and highly centralized, empire.
Similar processes were under way in Europe, as small states were consolidated into large ones, setting the stage for the tyrannies and gigantic wars of the twentieth century.
Even so, the three constitutional amendments ratified after the war contain a significant clause: "Congress shall have power to enforce

this article by appropriate legislation".
Why is this significant? Because it shows that even the conquerors still understood that a new power of Congress required a constitutional amendment. It couldn't just be taken by majority vote, as it would be today.
If the Congress then had wanted a national health plan, it would have begun by asking the people for an amendment to the Constitution authorizing it to legislate in the area of health care.
The immediate purpose of the Fourteenth Amendment was to provide a constitutional basis for a proposed civil rights act. But the Supreme Court soon found other uses for the Fourteenth Amendment. It began striking down state laws as unconstitutional.
This was an important new twist in American constitutional law. Hamilton, in arguing for judicial review in Federalist No. 78, had envisioned the Court as a check on Congress, resisting the illicit consolidation or centralization of power.
And our civics books still describe the function of checks and balances in terms of the three branches of the federal government mutually controlling each other.
But in fact, the Court was now countermanding the state legislatures, where the principle of checks and balances had no meaning, since those state legislatures had no reciprocal control on the Court. This development eventually set the stage for the convulsive Supreme Court rulings of the late twentieth century, from Brown v. Board of Educationï¿½to Roe v. Wade.
The big thing to recognize here is that the Court had become the very opposite of the institution Hamilton and others had had in mind. Instead of blocking the centralization of power in the federal government, the Court was assisting it.
The original point of the federal system was that the federal government would have very little to say about the internal affairs of the states. But the result of the Civil War was that the federal government had a great deal to say about those affairs ï¿½ in Northern as well as Southern states.
Note that this trend toward centralization was occurring largely under Republican presidents.
The Democrat Grover Cleveland was one of the last great spokesmen for federalism. He once vetoed a modest $10,000 federal grant for drought relief on grounds that there was no constitutional power to do it.
If that sounds archaic, remember that the federal principle remained strong long enough that during the 1950s, the federal highway program had to be called a "defense" measure in order to win approval, and federal loans to college students in the 1960s were absurdly called "defense" loans for the same reason.
The Tenth Amendment is a refined taste, but it has always had a few devotees. But federalism suffered some serious wounds during the presidency of Woodrow Wilson.
First came the income tax, its constitutionality established by the Sixteenth Amendment; this meant that every U.S. citizen was now, for the first time, directly accountable to the federal government.

Then the Seventeenth Amendment required that senators be elected by popular vote rather than chosen by state legislators; this meant that the states no longer had their own representation in Congress, so that they now lost their remaining control over the federal government.
The Eighteenth Amendment, establishing Prohibition, gave the federal government even greater powers over the country's internal affairs.
All these amendments were ominous signs that federalism was losing its traditional place in the hearts, and perhaps the minds, of Americans.
But again, notice that these expansions of federal power were at least achieved by amending the Constitution, as the Constitution itself requires. The Constitution doesn't claim to be a "living document". It is written on paper, not rubber.
In fact, the radicals of the early twentieth century despaired of achieving socialism or communism as long as the Constitution remained. They regarded it as the critical obstacle to their plans, and thought a revolution would be necessary to remove it. As The New Republic wrote: "To have a socialist society we must have a new Constitution." That's laying it on the line!
Unfortunately, the next generation of collectivists would be less candid in their contempt for the federal system. Once they learned to feign devotion to the Constitution they secretly regarded as obsolete, the laborious formality of amendment would no longer be necessary. They could merely pretend that the Constitution was on their side.
After Franklin Roosevelt restaffed the Supreme Court with his compliant cronies, the federal government would be free to make up its own powers as it went along, thanks to the notion that the Constitution was a malleable "living document" whose central meaning could be changed, and even reversed, by ingenious interpretation.
Roosevelt's New Deal brought fascist-style central planning to America ï¿½ what some call the "mixed economy" but Hilaire Belloc called the Servile Stateï¿½ï¿½ and his highhanded approach to governance soon led to conflict with the Court, which found several of his chief measures unconstitutional.
Early in his second term, Roosevelt retaliated by trying to "pack" the Court by increasing the number of seats. This power play alienated even many of his allies, but it turned out not to be necessary.
After 1937, the Court began seeing things Roosevelt's way. It voted as he wished; several members obligingly retired; and soon he had appointed a majority of the justices. The country virtually got a new Constitution.
Roosevelt's Court soon decided that the Tenth Amendment was a "truism" of no real force. This meant that almost any federal act was ipso facto constitutional, and the powers "reserved" to the states and the people were just leftovers the federal government didn't want, like the meal left for the jackals by the satisfied lion.
There was almost no limit, now, on what the federal government could do. In effect, the powers of the federal government no longer had to come from the people by constitutional delegation: they could be created by simple political power.
Roosevelt also set the baneful precedent of using entitlement

programs, such as Social Security, to buy some people's votes with other people's money. It was both a fatal corruption of democracy and the realization of the Servile State in America. The class of voting parasites has been swelling ever since.
So the New Deal didn't just expand the power of the federal government; that had been done before. The New Deal did much deeper mischief: it struck at the whole principle of constitutional resistance to federal expansion.
Congress didn't need any constitutional amendment to increase its powers; it could increase its own powers ad hoc, at any time, by simple majority vote. All this, of course, would have seemed monstrous to our ancestors.
Even Alexander Hamilton, who favored a relatively strong central government in his time, never dreamed of a government so powerful.
The Court suffered a bloody defeat at Roosevelt's hands, and since his time it has never found a major act of Congress unconstitutional.
This has allowed the power of the federal government to grow without restraint. At the federal level, "checks and balances" has ceased to include judicial review.
This is a startling fact, flying as it does in the face of the familiar conservative complaints about the Court's "activism". When it comes to Congress, the Court has been absolutely passive.
As if to compensate for its habit of capitulation to Congress, the Court's post-World War II "activism" has been directed entirely against the states, whose laws it has struck down in areas that used to be considered their settled and exclusive provinces.
Time after time, it has found "unconstitutional" laws whose legitimacy had stood unquestioned throughout the history of the Republic.
Notice how total the reversal of the Court's role has been. It began with the duty, according to Hamilton, of striking down new seizures of power by Congress. Now it finds constitutional virtually everything Congress chooses to do.
The federal government has assumed myriads of new powers nowhere mentioned or implied in the Constitution, yet the Court has never seriously impeded this expansion, or rather explosion, of novel claims of power. What it finds unconstitutional are the traditional powers of the states.
The postwar Court has done pioneering work in one notable area: the separation of church and state. I said "pioneering", not praiseworthy.
The Court has consistently imposed an understanding of the First Amendment that is not only exaggerated but unprecedented ï¿½ most notoriously in its 1962 ruling that prayer in public schools amounts to an "establishment of religion".
This interpretation of the Establishment Clause has always been to the disadvantage of Christianity and of any law with roots in Christian morality. And it's impossible to doubt that the justices who voted for this interpretation were voting their predilections.
Maybe that's the point. I've never heard it put quite this way, but the Court's boldest rulings showed something less innocent than a series of honest mistakes.

Studying these cases and others of the Court's liberal heyday, one never gets the sense that the majority was suppressing its own preferences; it was clearly enacting them.
Those rulings can be described as wishful thinking run amok, and touched with more than a little arrogance. All in all, the Court displayed the opposite of the restrained and impartial temperament one expects even of a traffic-court judge, let alone a Supreme Court.
It's ironic to recall Hamilton's assurance that the Supreme Court would be "the least dangerous" of the three branches of the federal government.
But Hamilton did give us a shrewd warning about what would happen if the Court were ever corrupted: in Federalist No. 78, he wrote that "liberty can have nothing to fear from the judiciary alone, but would have everything to fear from its union with either of the other [branches]."
Since Franklin Roosevelt, as I've said, the judiciary has in effect formed a union with the other two branches to aggrandize the power of the federal government at the expense of the states and the people.
This, in outline, is the constitutional history of the United States.
You won't find it in the textbooks, which are required to be optimistic, to present degeneration as development, and to treat the successive pronouncements of the Supreme Court as so many oracular revelations of constitutional meaning.
A leading liberal scholar, Leonard Levy (a jew), has gone so far as to say that what matters is not what the Constitution says, but what the Court has said about the Constitution in more than 400 volumes of commentary.
This can only mean that the commentary has displaced the original text, and that "We the People" have been supplanted by "We the Lawyers."
We the People can't read and understand our own Constitution. We have to have it explained to us by the professionals. Moreover, if the Court enjoys oracular status, it can't really be criticized, because it can do no wrong.
We may dislike its results, but future rulings will have to be derived from them as precedents, rather than from the text and logic of the Constitution.
And notice that the "conservative" justices appointed by Republican presidents have by and large upheld not the original Constitution, but the most liberal interpretations of the Court itself ï¿½ notably on the subject of abortion, which I'll return to in a minute.
To sum up this little constitutional history.
The history of the Constitution is the story of its inversion. The original understanding of the Constitution has been reversed.
The Constitution creates a presumption against any power not plainly delegated to the federal government and a corresponding presumption in favor of the rights and powers of the states and the people. But we now have a sloppy presumption in favor of federal power.
Most people assume the federal government can do anything it isn't plainly forbidden to do.

The Ninth and Tenth Amendments were adopted to make the principle of the Constitution as clear as possible.
Hamilton argued against adding a Bill of Rights, on grounds that it would be redundant and confusing. He thought it would seem to imply that the federal government had more powers than it had been given. Why say, he asked, that the freedom of the press shall not be infringed, when the federal government would have no power by which it could be infringed?
And you can even make the case that he was exactly right. He understood, at any rate, that our freedom is safer if we think of the Constitution as a list of powers rather than as a list of rights. Be that as it may, the Bill of Rights was adopted, but it was designed to meet his objection.
The Ninth Amendment says: "The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people."
The Tenth says: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."
Now what these two provisions mean is pretty simple. The Ninth means that the list of the people's rights in the Constitution is not meant to be complete ï¿½ that they still have many other rights, like the right to travel or to marry, which may deserve just as much respect as the right not to have soldiers quartered in one's home in peacetime.
The Tenth, on the other hand, means that the list of powers "delegated" to the federal government is complete ï¿½ and that any other powers the government assumed would be, in the Framers' habitual word, "usurped".
As I said earlier, the Founders believed that our rights come from God, and the government's powers come from us. So the Constitution can't list all our rights, but it can and does list all the federal government's powers.
You can think of the Constitution as a sort of antitrust act for government, with the Ninth and Tenth Amendments at its core. It's remarkable that the same liberals who think business monopolies are sinister think monopolies of political power are progressive.
When they can't pass their programs because of the constitutional safeguards, they complain about "gridlock" ï¿½ a clichï¿½ that shows they miss the whole point of the enumeration and separation of powers.
Well, I don't have to tell you that this way of thinking is absolutely alien to that of today's politicians and pundits.
Can you imagine John Kerry, George Bush, Al Gore, Dan Rostenkowski, or even Tom Brokaw having a conversation about political principles with any of the Founding Fathers? If you can, you must have a vivid fantasy life. And the result of the loss of our original political idiom has been, as I say, to invert the original presumptions.
The average American, whether he has had high-school civics or a degree in political science, is apt to assume that the Constitution somehow empowers the government to do nearly anything, while implicitly limiting our rights by listing them.

Not that anyone would say it this way, but it's as if the Bill of Rights had said that the enumeration of the federal government's powers in the Constitution is not meant to deny or disparage any other powers it may choose to claim, while the rights not given to the people in the Constitution are reserved to the federal government to give or withhold, and the states may be progressively stripped of their original powers.

What it comes down to is that we don't really have an operative Constitution anymore. The federal government defines its own powers day by day. It's limited not by the list of its powers in the Constitution, but by whatever it can get away with politically. Just as the president can now send troops abroad to fight without a declaration of war, Congress can pass a national health care program without a constitutional delegation of power. The only restraint left is political opposition.

If you suspect I'm overstating the change from our original principles, I give you the late Justice Hugo Black. In a 1965 case called Griswold v. Connecticut, the Court struck down a law forbidding the sale of contraceptives on grounds that it violated a right of "privacy." (This supposed right, of course, became the basis for the Court's even more radical 1973 ruling in Roe v. Wade,ï¿½but that's another story.)

Justice Black dissented in the Griswoldï¿½case on the following ground: "I like my privacy as well as the next [man]," he wrote, "but I am nevertheless compelled to admit that government has a right to invade it unless prohibited by some specific constitutional provision."

What a hopelessly muddled ï¿½ and really sinister ï¿½ misconception of the relation between the individual and the state: government has a right to invade our privacy, unless prohibited by the Constitution.

You don't have to share the Court's twisted view of the right of privacy in order to be shocked that one of its members takes this view of the "right" of government to invade privacy.

It gets crazier. In 1993 the Court handed down one of the most bizarre decisions of all time.

For two decades, enemies of legal abortion had been supporting Republican candidates in the hope of filling the Court with appointees who would review Roe v. Wade.

In Planned Parenthood v. Casey,ï¿½the Court finally did so. But even with eight Republican appointees on the Court, the result was not what the conservatives had hoped for. The Court reaffirmed Roe.

Its reasoning was amazing. A plurality opinion ï¿½ a majority of the five-justice majority in the case ï¿½ admitted that the Court's previous ruling in Roeï¿½might be logically and historically vulnerable.

But it held that the paramount consideration was that the Court be consistent, and not appear to be yielding to public pressure, lest it lose the respect of the public. Therefore the Court allowed Roeï¿½to stand.

Among many things that might be said about this ruling, the most basic is this: The Court in effect declared itself a third party to the controversy, and then, setting aside the merits of the two principals'

claims, ruled in its own interest!
It was as if the referee in a prizefight had declared himself the winner. Cynics had always suspected that the Court did not forget its self-interest in its decisions, but they never expected to hear it say so.
The three justices who signed that opinion evidently didn't realize what they were saying. A distinguished veteran Court-watcher (who approved of Roe,ï¿½by the way) told me he had never seen anything like it.
The Court was actually telling us that it put its own welfare ahead of the merits of the arguments before it. In its confusion, it was blurting out the truth.
But by then, very few Americans could even remember the original constitutional plan. The original plan was as Madison and Tocqueville described it: State government was to be the rule, federal government the exception.
The states' powers were to be "numerous and indefinite", federal powers "few and defined." This is a matter not only of history, but of iron logic: the Constitution doesn't make sense when read any other way. As Madison asked, why bother listing particular federal powers unless unlisted powers are withheld?
The unchecked federal government has not only overflowed its banks; it has even created its own economy.
Thanks to its exercise of a myriad of unwarranted powers, it can claim tens of millions of dependents, at least part of whose income is due to the abuse of the taxing and spending powers for their benefit: government employees, retirees, farmers, contractors, teachers, artists, even soldiers.
Large numbers of these people are paid much more than their market value because the taxpayer is forced to subsidize them.
By the same token, most taxpayers would instantly be better off if the federal government simply ceased to exist ï¿½ or if it suddenly returned to its constitutional functions.
Can we restore the Constitution and recover our freedom? I have no doubt that we can. Like all great reforms, it will take an intelligent, determined effort by many people. I don't want to sow false optimism.
But the time is ripe for a constitutional counterrevolution.
Discontent with the ruling system, as the 1992 Perot vote showed, is deep and widespread among several classes of people: Christians, conservatives, gun owners, taxpayers, and simple believers in honest government all have their reasons. The rulers lack legitimacy and don't believe in their own power strongly enough to defend it.
The beauty of it is that the people don't have to invent a new system of government in order to get rid of this one. They only have to restore the one described in the Constitution ï¿½ the system our government already professes to be upholding. Taken seriously, the Constitution would pose a serious threat to our form of government.
And for just that reason, the ruling parties will be finished as soon as the American people rediscover and awaken their dormant

Constitution.

I wonder how many of the bills are actually read by people who sponsor or vote on them.

Unfortunately for the Senator, his campaign decided to deny the shotgun would have been banned without offering an explanation as to why, and they've attacked the Republicans for bringing it up.

If the shotgun would have been banned, they could have scored some credibility points by saying "Whoops!".

If I ever ran for congress, I think one of my main issues would be the need to simplify and reduce the number of laws we have so more people could understand what they were expected to do.

261. (OT) Kerry Kamp Lies?

Newsgroup: rec.radio.shortwave
Date: 2004-09-08 14:21:24 UTC
From: dxAce <dxace@iservd.net>

This is very interesting as Ben Barnes, former Lt. Governor of Texas is set to air an interview with Dan Rather on CBS.

It would appear that Barnes is going to say that he used his influence as Lt. Governor to get the young George W. Bush into the Texas Air National Guard.

Strange thing is.... GWB was in the TANG in 1968, and Barnes did not become Lt. Gov. until 1969...

Guess this needs a bit more clarification.

Apparently he was Speaker of the Texas House at the time. Strange though that he claims he was not contacted by a member of the Bush family, but rather a NOW DECEASED Sidney Adger, a Houston oilman.

It is unfortunate that Mr. Adger is no longer here to shed some light on this matter.

Source record: 315

The Russians began deporting Chechens to Siberia and what became the gulag in the Czarist days, and continued under Stalin with renewed vigor. The policy was to "Russianify" minorities. A policy started in the 18th century with Peter the Great. Approx 1.3 million Chechens were deported in the 20th century, with 10% dying in transport. The Russians eventually had to give up on some minorities and now we have a host of new countries, e.g., the "-stan" countries, Georgia, Armenia, Bylerus. Some of the smaller minorities were more effectively wiped out, or so they thought (e.g., Caucasians (from Caucasus mountains, not white people), Karachai, Balkars, Tartars, Khemsils, Kurds. I guess they were more or less successful with some of these: I hadn't heard of some of them before. The Chechen Autonomous Republic was dissolved by Stalin in the late 1940's. The excuse was alleged collaboration with the Nazis, of which there is evidence of 335 people doing so (ref "Gulag" - Anne Applebaum, 2003). Now we have the problem of re-emergent ethnic identity that is emboldened by Islamic fundamentalism, poor social conditions, and a long history of hatred.

Grozny (capital) is mostly rubble today. Exact civilian casuality numbers are not known from the two Russian invasions in the 1990's, but it is thought that about 100,000 were killed. RN had a reporter there about a year and half ago and described the lack of clean water, heating fuel, food, shelter. The Russians have blockaded various parts of the region at various times to try to starve out areas where the rebels are holed up. Unknown the ongoing civilian casualities. I don't think the situation will get better soon. The news today suggests that the Russians support aggressive offensives after the school massacre. Many Chechens no doubt support terrorism against the Russians based on both the 1990's and long history of deportation and invasion. The history of the region is a disaster and the future looks the same.

No. They support killing innocent children because they like to kill.
There is no other reason to kill nothing but innocents, especially
children.

I'm very much aware of where Canada is, and Calgary's place in it.

I have a QSL from CFVP on 6030.

I'm afraid you might have me confused with Michael W. Bryant, he's the one who can't tell Malaysia from Indonesia, or his ass from a hole in the ground for that matter.

It will stabilize the oscillator. The real question is whether it is needed. It could be useful if you are going to park on one frequency and the receiver has to stay on frequency for a long time. As you might find when receiving a multiplex signal. For most modern receivers drift isn't a real problem.

> No shit. And if you have too many spots, all you have to do is double
> the price.
> Half of the advertisers will drop, the other half will pay their share,
> and you just
> cut half of the spots from your station.

Advertising is sold by delivery of audience. If you cut spot load by 50%, and do not increase listenership, your revenue decreases by half (assuming you are selling all your inventory).

> So simple, yet many are too afraid to
> turn down any advertiser to do it. We did it and it works just fine.
> Better to
> turn away advertisers than listeners! If you have listeners, you will
> always have
> advertisers, but you don't get listeners from having more advertisers,
> you get LESS
> listeners.

There are simple metrics applied to the buying of ad time, and they relate to the cost per listener, experessed as cost per thousand, cost per point, etc. Simply reducing spot loads does not improve the rate on the remaining accounts.

> This is the problem with those in radio management, they never just ask
> themselves
> what THEY would listen to. All you had to do is ask the DJs what they
> thought, as
> they are the ones that listen to the station longer than anyone. If

> of a song or spot, it means time to drop it!

Actually, a DJ listens far more per week than all but the most agressive listeners. The best way to find out what listeners want is to ask the listeners. Which is what most major stations do.
>
>> Sometimes stations play the same spot twice during a
>> single set! How effective can that be to that customer?
>
> I never understood that.

It's researched and very effective in increasing memorability through repetition. As are bookends.

> If I was the advertiser, I would much rather have had the
> extra spot play in another hour or on another station than waste two in
> the same
> break.

Generally, if this happens, the advertiser has paid extra to make it happen.
Because it works so well.

We've veered way off topic, and I'm not going to push through posts in this thread to rec.radio.broadcasting anymore. If you want to continue posting in this thread in newsgroups other than RRB, that's your choice, but no more in RRB. The thread stopped being about radio after (roughly) the second post, or maybe the third.

Cheers,
Steve [RRB Moderator]

Many station groups have long limited commercial percentages to well below what is considered excessive. There is nothing new in this. Oddly, back in the 50's and 60's when many claim such great radio was done, the FCC had to actually create an implied guideline of 18 minutes an hour. Most stations today are well below that, and one I work with are in the 10 minute range consistently.
>
> Problem is, if you are programming shit, you can only charge $5 a spot.

Advertisers do not call stations, especially big ones. Radio does not work this way, advertising does not work this way, marketing does not work this way

>
> Finally someone here that talks some sense.

This is nothing new. I ran a top rated FM in the late 60's that ran 2 minutes of spots an hour. It billed as much as any station in the market. There are plenty of examples of this.

An extensive mod is not needed for the AR7030, since its "9.5 kHz"
position is wide enough. All that's needed is a downmixer with f_mix =
467 kHz to be attached to the receiver's 455 kHz IF output.

The CODAR transmitters are causing some serious QRM on the tropical bands in the range 4500-5000/Khz. I've emailed some of the operators, which are usually universities, to remind them that their transmitters are disrupting certain international broadcasts. However the FCC encouraged them to use these frequencies because shortwave listeners are at the bottom of the barrel when it comes to interference from licensed stations such as CODAR. The current FCC chairman doesn't seem to care about the possible interference from the proposed BPL systems, so I doubt he's concerned about CODAR interference to shortwave listeners.

316. Bonaire transmissions suspended due to Hurricane Ivan

Newsgroup: rec.radio.shortwave
Date: 2004-09-08 21:59:52 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <chnvco$7eo$1@hercules.btinternet.com>
Source record: 266

Wednesday, September 08, 2004

For safety reasons, our Bonaire relay station will stop broadcasting this evening at 1900 UTC, and the staff will be evacuated, while Hurricane Ivan passes through the area. Radio Netherlands Acting D-G Jan Hoek says "The relay station consists of 20 antennas, of which the highest is about 100 metres. With such high windspeeds, the transmitting station is a dangerous area. The safety of our staff is naturally the number one priority. We remain in close contact with our colleagues on the island who are keeping us informed of the latest situation." At this time it is not known how long the station will be off the air.

The following transmissions will be taken over by our Flevo transmitter site. Others will be off the air.

1900-2057 UTC English 17810 kHz
2100-2157 UTC Dutch 15315 kHz and 17810 kHz
2200-2257 UTC Dutch 15315 kHz
2200-2256 UTC RVI 11635 kHz
0000-0157 UTC English 9845 kHz
0200-0257 UTC Spanish 6165 kHz
0300-0357 UTC Dutch 6165 kHz

Fahrenheit 9/11: 'The Less That See It, The Better For Bush'

Michael Moore has pulled his controversial Fahrenheit 9/11 out of contention for a 'sure bet' Oscar nomination for Best Documentary in a bid to get the film shown to a wider audience on broadcast TV, and influence the outcome of this year's heated Presidential Election.

According to a recent Gallup survey, more than half of all American adults have either seen or expect to see Moore's wildly popular movie, Fahrenheit 9/11, a critical look at the Bush administration's decision to go to war with Iraq. The poll, conducted July 8-11, found that 8% of Americans said they have already seen the movie, 18% expected to see it at a theater, and 30% expected to watch it on DVD or home video.

How odd that you cut off the article before this paragraph:

"In an informal poll conducted by Moore's pollster friend -- who formerly worked for the Republicans -- he found that the 80% of the Fahrenheit 9/11 audiences in three different cities were essentially likely Kerry voters, but 'the movie has galvanized them in a way you rarely see Democrats galvanized.' "

In other words, Moore is preaching to the choir. Those who see it and like it are already predisposed to like it. Since they are 4/5 Kerry voters, they are also likely to be unconcerned with the copious amounts of misleading propaganda sprinkled throughout.

BTW, if shown on TV, the movie would still be eligible for a -best picture- nomination, which might actually be more honest than lumping it in with real documentaries.

320. Re: Next Stop ... MARTIAL LAW

> Please ... read on.
>
> How Tyranny Came to America
> ==========
> One of the great goals of education is to initiate the young into the
> conversation of their ancestors; to enable them to understand the
> language of that conversation, in all its subtlety, and maybe even, in
> their maturity, to add to it some wisdom of their own.
> The modern American educational system no longer teaches us the
> political language of our ancestors. In fact our schooling helps widen
> the gulf of time between our ancestors and ourselves, because much of
> what we are taught in the name of civics, political science, or
> American history is really modern liberal propaganda.
> Sometimes this is deliberate. Worse yet, sometimes it isn't. Our
> ancestral voices have come to sound alien to us, and therefore our own
> moral and political language is impoverished. It's as if the people of
> England could no longer understand Shakespeare, or Germans couldn't
> comprehend Mozart and Beethoven.
> So to most Americans, even those who feel oppressed by what they call
> big government, it must sound strange to hear it said, in the past
> tense, that tyranny "came" to America. After all, we have a
> constitution, don't we?
> We've abolished slavery and segregation. We won two world wars and the
> Cold War. We still congratulate ourselves before every ballgame on
> being the Land of the Free. And we aren't ruled by some fanatic with a
> funny mustache who likes big parades with thousands of soldiers
> goose-stepping past huge pictures of himself.
> For all that, we no longer fully have what our ancestors, who framed
> and ratified our Constitution, thought of as freedom - a careful
> division of power that prevents power from becoming concentrated and
> unlimited.
> The word they usually used for concentrated power was consolidated - a
> rough synonym for fascist. And the words they used for any excessive
> powers claimed or exercised by the state were usurped and tyrannical.

> They would consider the modern "liberal" state tyrannical in
> principle; they would see in it not the opposite of the fascist,
> communist, and socialist states, but their sister.
> If Washington and Jefferson, Madison, and Hamilton could come back,
> the first thing they'd notice would be that the federal government now
> routinely assumes thousands of powers never assigned to it - powers
> never granted, never delegated, never enumerated.
> These were the words they used, and it's a good idea for us to learn
> their language.
> They would say that we no longer live under the Constitution they
> wrote. And the Americans of a much later era - the period from
> Cleveland to Coolidge, for example - would say we no longer live even
> under the Constitution they inherited and amended.
> I call the present system "Post-Constitutional America." As I
> sometimes put it, the U.S. Constitution poses no serious threat to our
> form of government.
> What's worse is that our constitutional illiteracy cuts us off from
> our own national heritage. And so our politics degenerates into
> increasingly bitter and unprincipled quarrels about who is going to
> bear the burdens of war and welfare.
> I don't want to sound like an oracle on this subject. As a typical
> victim of modern public education and a disinformed citizen of this
> media-ridden country, I took a long time - an embarrassingly long time
> - to learn what I'm passing on.
> It was like studying geometry in old age, and discovering how simple
> the basic principles of space really are. It was the old story: In
> order to learn, first I had to unlearn.
> Most of what I'd been taught and told about the Constitution was
> misguided or even false. And I'd never been told some of the most
> elementary things, which would have saved me a tremendous amount of
> confusion.
> The Constitution does two things.
> First, it delegates certain enumerated powers to the federal
> government. Second, it separates those powers among the three
> branches.
> Most people understand the secondary principle of the separation of
> powers. But they don't grasp the primary idea of delegated and
> enumerated powers.
> Consider this. We have recently had a big national debate over
> national health care. Advocates and opponents argued long and loud
> over whether it could work, what was fair, how to pay for it, and so
> forth.
> But almost nobody raised the basic issue: Where does the federal
> government get the power to legislate in this area? The answer is:
> NOWHERE.
> The Constitution lists 18 specific legislative powers of Congress, and
> not a one of them covers national health care.
> As a matter of fact, none of the delegated powers of Congress - and
> delegated is always the key word - covers Social Security, or

> Medicaid, or Medicare, or federal aid to education, or most of what
> are now miscalled "civil rights," or countless public works projects,
> or equally countless regulations of business, large and small, or the
> space program, or farm subsidies, or research grants, or subsidies to
> the arts and humanities, or ... well, you name it, chances are, it's
> unconstitutional.
> Even the most cynical opponents of the Constitution would be
> dumbfounded to learn that the federal government now tells us where we
> can smoke. We are less free, more heavily taxed, and worse governed
> than our ancestors under British rule. Sometimes this government makes
> me wonder: Was George III really all that bad?
> Let's be clear about one thing.
> Constitutional and unconstitutional aren't just simple terms of
> approval and disapproval. A bad law may be perfectly constitutional. A
> wise and humane law may be unconstitutional. But what is almost
> certainly bad is a constant disposition to thwart or disregard the
> Constitution.
> It's not just a matter of what is sometimes called the "original
> intent" of the authors of the Constitution. What really matters is the
> common, explicit, unchallenged understanding of the Constitution, on
> all sides, over several generations. There was no mystery about it.
> The logic of the Constitution was so elegantly simple that a foreign
> observer could explain it to his countrymen in two sentences.
> Alexis de Tocqueville wrote that "the attributes of the federal
> government were carefully defined [in the Constitution], and all that
> was not included among them was declared to remain to the governments
> of the individual states. Thus the government of the states remained
> the rule, and that of the federal government the exception".
> The Declaration of Independence, which underlies the Constitution,
> holds that the rights of the people come from God, and that the powers
> of the government come from the people.
> Let me repeat that: According to the Declaration of Independence, the
> rights of the people come from God, and the powers of the government
> come from the people. Unless you grasp this basic order of things,
> you'll have a hard time understanding the Constitution.
> The Constitution was the instrument by which the American people
> granted, or delegated, certain specific powers to the federal
> government. Any power not delegated was withheld, or "reserved".
> As we'll see later, these principles are expressed particularly in the
> Ninth and Tenth Amendments, two crucial but neglected provisions of
> the Constitution. Let me say it yet again: The rights of the people
> come from God. The powers of government come from the people.
> The American people delegated the specific powers they wanted the
> federal government to have through the Constitution. Any additional
> powers they wanted to grant were supposed to be added by amendment.
> It's largely because we've forgotten these simple principles that the
> country is in so much trouble. The powers of the federal government
> have multiplied madly, with only the vaguest justifications and on the
> most slippery pretexts.

> Its chief business now is not defending our rights but taking and
> redistributing our wealth. It has even created its own economy, the
> tax economy, which is parasitical on the basic and productive
> voluntary economy.
> Even much of what passes for "national defense" is a kind of hidden
> entitlement program, as was illustrated when President George Bush
> warned some states during the 1992 campaign that Bill Clinton would
> destroy jobs by closing down military bases.
> Well, if those bases aren't necessary for our defense, they should be
> closed down.
> Now of course nobody in American politics, not even the most fanatical
> liberal, will admit openly that he doesn't care what the Constitution
> says and isn't going to let it interfere with his agenda.
> Everyone professes to respect it - even the Supreme Court. That's the
> problem. The U.S. Constitution serves the same function as the British
> royal family: it offers a comforting symbol of tradition and
> continuity, thereby masking a radical change in the actual system of
> power.
> So the people who mean to do without the Constitution have come up
> with a slogan to keep up appearances: they say the Constitution is a
> "living document", which sounds like a compliment.
> They say it has "evolved" in response to "changing circumstances,"
> etc. They sneer at the idea that such a mystic document could still
> have the same meanings it had two centuries ago, or even, I guess,
> sixty years ago, just before the evolutionary process started
> accelerating with fantastic velocity.
> These people, who tend with suspicious consistency to be liberals,
> have discovered that the Constitution, whatever it may have meant in
> the past, now means - again, with suspicious consistency - whatever
> suits their present convenience.
> Do liberals want big federal entitlement programs? Lo, the Interstate
> Commerce Clause turns out to mean that the big federal programs are
> constitutional!
> Do liberals oppose capital punishment? Lo, the ban on "cruel and
> unusual punishment" turns out to mean that capital punishment is
> unconstitutional!
> Do liberals want abortion on demand? Lo, the Ninth and Fourteenth
> Amendments, plus their emanations and penumbras, turn out to mean that
> abortion is nothing less than a woman's constitutional right!
> Can all this be blind evolution? If liberals were more religious, they
> might suspect the hand of Providence behind it! This marvelous "living
> document" never seems to impede the liberal agenda in any way.
> On the contrary: it always seems to demand, by a wonderful
> coincidence, just what liberals are prescribing on other grounds.
> Take abortion. Set aside your own views and feelings about it. Is it
> really possible that, as the Supreme Court in effect said, all the
> abortion laws of all 50 states - no matter how restrictive, no matter
> how permissive - had always been unconstitutional?
> Not only that, but no previous Court, no justice on any Court in all

> our history - not Marshall, not Story, not Taney, not Holmes, not
> Hughes, not Frankfurter, not even Warren - had ever been recorded as
> doubting the constitutionality of those laws. Everyone had always
> taken it for granted that the states had every right to enact them.
> Are we supposed to believe, in all seriousness, that the Court's
> ruling in Roe v. Wade was a response to the text of the Constitution,
> the discernment of a meaning that had eluded all its predecessors,
> rather than an enactment of the current liberal agenda? Come now.
> And notice that the parts of this "living document" don't develop
> equally or consistently. The Court has expanded the meaning of some of
> liberalism's pet rights, such as freedom of speech, to absurd lengths;
> but it has neglected or even contracted other rights, such as property
> rights, which liberalism is hostile to.
> In order to appreciate what has happened, you have to stand back from
> all the details and look at the outline. What follows is a thumbnail
> history of the Constitution.
> In the beginning the states wereindependentandsovereign.Thatis
> why they were called "states": a state was not yet thought of as a
> mere subdivision of a larger unit, as is the case now.
> The universal understanding was that in ratifying the Constitution,
> the 13 states yielded a very little of their sovereignty, but kept
> most of it.
> Those who were reluctant to ratify generally didn't object to the
> powers the Constitution delegated to the federal government. But they
> were suspicious: they wanted assurance that if those few powers were
> granted, other powers, never granted, wouldn't be seized too.
> In The Federalist, Hamilton and Madison argued at some length that
> under the proposed distribution of power the federal government would
> never be able to "usurp", as they put it, those other powers.
> Madison wrote soothingly in Federalist No. 45 that the powers of the
> federal government would be "few and defined," relating mostly to war
> and foreign policy, while those remaining with the states would be
> "numerous and indefinite", and would have to do with the everyday
> domestic life of the country.
> The word usurpation occurs numberless times in the ratification
> debates, reflecting the chief anxiety the champions of the
> Constitution had to allay. And as a final assurance, the Tenth
> Amendment stipulated that the powers not "delegated" to the federal
> government were "reserved" to the separate states and to the people.
> But this wasn't enough to satisfy everyone.
> Well-grounded fears persisted. And during the first half of the
> nineteenth century, nearly every president, in his inaugural message,
> felt it appropriate to renew the promise that the powers of the
> federal government would not be exceeded, nor the reserved powers of
> the states transgressed.
> The federal government was to remain truly federal, with only a few
> specified powers, rather than "consolidated" with unlimited powers.
> The Civil War, or the War Between the States if you like, resulted
> from the suspicion that the North meant to use the power of the Union

> to destroy the sovereignty of the Southern states.
> Whether or not that suspicion was justified, the war itself produced
> that very result. The South was subjugated and occupied like a
> conquered country. Its institutions were profoundly remade by the
> federal government; the United States of America was taking on the
> character of an extensive, and highly centralized, empire.
> Similar processes were under way in Europe, as small states were
> consolidated into large ones, setting the stage for the tyrannies and
> gigantic wars of the twentieth century.
> Even so, the three constitutional amendments ratified after the war
> contain a significant clause: "Congress shall have power to enforce
> this article by appropriate legislation".
> Why is this significant? Because it shows that even the conquerors
> still understood that a new power of Congress required a
> constitutional amendment. It couldn't just be taken by majority vote,
> as it would be today.
> If the Congress then had wanted a national health plan, it would have
> begun by asking the people for an amendment to the Constitution
> authorizing it to legislate in the area of health care.
> The immediate purpose of the Fourteenth Amendment was to provide a
> constitutional basis for a proposed civil rights act. But the Supreme
> Court soon found other uses for the Fourteenth Amendment. It began
> striking down state laws as unconstitutional.
> This was an important new twist in American constitutional law.
> Hamilton, in arguing for judicial review in Federalist No. 78, had
> envisioned the Court as a check on Congress, resisting the illicit
> consolidation or centralization of power.
> And our civics books still describe the function of checks and
> balances in terms of the three branches of the federal government
> mutually controlling each other.
> But in fact, the Court was now countermanding the state legislatures,
> where the principle of checks and balances had no meaning, since those
> state legislatures had no reciprocal control on the Court. This
> development eventually set the stage for the convulsive Supreme Court
> rulings of the late twentieth century, from Brown v. Board of
> Education to Roe v. Wade.
> The big thing to recognize here is that the Court had become the very
> opposite of the institution Hamilton and others had had in mind.
> Instead of blocking the centralization of power in the federal
> government, the Court was assisting it.
> The original point of the federal system was that the federal
> government would have very little to say about the internal affairs of
> the states. But the result of the Civil War was that the federal
> government had a great deal to say about those affairs - in Northern
> as well as Southern states.
> Note that this trend toward centralization was occurring largely under
> Republican presidents.
> The Democrat Grover Cleveland was one of the last great spokesmen for
> federalism. He once vetoed a modest $10,000 federal grant for drought

> relief on grounds that there was no constitutional power to do it.
> If that sounds archaic, remember that the federal principle remained
> strong long enough that during the 1950s, the federal highway program
> had to be called a "defense" measure in order to win approval, and
> federal loans to college students in the 1960s were absurdly called
> "defense" loans for the same reason.
> The Tenth Amendment is a refined taste, but it has always had a few
> devotees. But federalism suffered some serious wounds during the
> presidency of Woodrow Wilson.
> First came the income tax, its constitutionality established by the
> Sixteenth Amendment; this meant that every U.S. citizen was now, for
> the first time, directly accountable to the federal government.
> Then the Seventeenth Amendment required that senators be elected by
> popular vote rather than chosen by state legislators; this meant that
> the states no longer had their own representation in Congress, so that
> they now lost their remaining control over the federal government.
> The Eighteenth Amendment, establishing Prohibition, gave the federal
> government even greater powers over the country's internal affairs.
> All these amendments were ominous signs that federalism was losing its
> traditional place in the hearts, and perhaps the minds, of Americans.
> But again, notice that these expansions of federal power were at least
> achieved by amending the Constitution, as the Constitution itself
> requires. The Constitution doesn't claim to be a "living document". It
> is written on paper, not rubber.
> In fact, the radicals of the early twentieth century despaired of
> achieving socialism or communism as long as the Constitution remained.
> They regarded it as the critical obstacle to their plans, and thought
> a revolution would be necessary to remove it. As The New Republic
> wrote: "To have a socialist society we must have a new Constitution."
> That's laying it on the line!
> Unfortunately, the next generation of collectivists would be less
> candid in their contempt for the federal system. Once they learned to
> feign devotion to the Constitution they secretly regarded as obsolete,
> the laborious formality of amendment would no longer be necessary.
> They could merely pretend that the Constitution was on their side.
> After Franklin Roosevelt restaffed the Supreme Court with his
> compliant cronies, the federal government would be free to make up its
> own powers as it went along, thanks to the notion that the
> Constitution was a malleable "living document" whose central meaning
> could be changed, and even reversed, by ingenious interpretation.
> Roosevelt's New Deal brought fascist-style central planning to America
> - what some call the "mixed economy" but Hilaire Belloc called the
> Servile State - and his highhanded approach to governance soon led to
> conflict with the Court, which found several of his chief measures
> unconstitutional.
> Early in his second term, Roosevelt retaliated by trying to "pack" the
> Court by increasing the number of seats. This power play alienated
> even many of his allies, but it turned out not to be necessary.
> After 1937, the Court began seeing things Roosevelt's way. It voted as

> he wished; several members obligingly retired; and soon he had
> appointed a majority of the justices. The country virtually got a new
> Constitution.
> Roosevelt's Court soon decided that the Tenth Amendment was a "truism"
> of no real force. This meant that almost any federal act was ipso
> facto constitutional, and the powers "reserved" to the states and the
> people were just leftovers the federal government didn't want, like
> the meal left for the jackals by the satisfied lion.
> There was almost no limit, now, on what the federal government could
> do. In effect, the powers of the federal government no longer had to
> come from the people by constitutional delegation: they could be
> created by simple political power.
> Roosevelt also set the baneful precedent of using entitlement
> programs, such as Social Security, to buy some people's votes with
> other people's money. It was both a fatal corruption of democracy and
> the realization of the Servile State in America. The class of voting
> parasites has been swelling ever since.
> So the New Deal didn't just expand the power of the federal
> government; that had been done before. The New Deal did much deeper
> mischief: it struck at the whole principle of constitutional
> resistance to federal expansion.
> Congress didn't need any constitutional amendment to increase its
> powers; it could increase its own powers ad hoc, at any time, by
> simple majority vote. All this, of course, would have seemed monstrous
> to our ancestors.
> Even Alexander Hamilton, who favored a relatively strong central
> government in his time, never dreamed of a government so powerful.
> The Court suffered a bloody defeat at Roosevelt's hands, and since his
> time it has never found a major act of Congress unconstitutional.
> This has allowed the power of the federal government to grow without
> restraint. At the federal level, "checks and balances" has ceased to
> include judicial review.
> This is a startling fact, flying as it does in the face of the
> familiar conservative complaints about the Court's "activism". When it
> comes to Congress, the Court has been absolutely passive.
> As if to compensate for its habit of capitulation to Congress, the
> Court's post-World War II "activism" has been directed entirely
> against the states, whose laws it has struck down in areas that used
> to be considered their settled and exclusive provinces.
> Time after time, it has found "unconstitutional" laws whose legitimacy
> had stood unquestioned throughout the history of the Republic.
> Notice how total the reversal of the Court's role has been. It began
> with the duty, according to Hamilton, of striking down new seizures of
> power by Congress. Now it finds constitutional virtually everything
> Congress chooses to do.
> The federal government has assumed myriads of new powers nowhere
> mentioned or implied in the Constitution, yet the Court has never
> seriously impeded this expansion, or rather explosion, of novel claims
> of power. What it finds unconstitutional are the traditional powers of

> the states.
> The postwar Court has done pioneering work in one notable area: the
> separation of church and state. I said "pioneering", not praiseworthy.
> The Court has consistently imposed an understanding of the First
> Amendment that is not only exaggerated but unprecedented - most
> notoriously in its 1962 ruling that prayer in public schools amounts
> to an "establishment of religion".
> This interpretation of the Establishment Clause has always been to the
> disadvantage of Christianity and of any law with roots in Christian
> morality. And it's impossible to doubt that the justices who voted for
> this interpretation were voting their predilections.
> Maybe that's the point. I've never heard it put quite this way, but
> the Court's boldest rulings showed something less innocent than a
> series of honest mistakes.
> Studying these cases and others of the Court's liberal heyday, one
> never gets the sense that the majority was suppressing its own
> preferences; it was clearly enacting them.
> Those rulings can be described as wishful thinking run amok, and
> touched with more than a little arrogance. All in all, the Court
> displayed the opposite of the restrained and impartial temperament one
> expects even of a traffic-court judge, let alone a Supreme Court.
> It's ironic to recall Hamilton's assurance that the Supreme Court
> would be "the least dangerous" of the three branches of the federal
> government.
> But Hamilton did give us a shrewd warning about what would happen if
> the Court were ever corrupted: in Federalist No. 78, he wrote that
> "liberty can have nothing to fear from the judiciary alone, but would
> have everything to fear from its union with either of the other
> [branches]."
> Since Franklin Roosevelt, as I've said, the judiciary has in effect
> formed a union with the other two branches to aggrandize the power of
> the federal government at the expense of the states and the people.
> This, in outline, is the constitutional history of the United States.
> You won't find it in the textbooks, which are required to be
> optimistic, to present degeneration as development, and to treat the
> successive pronouncements of the Supreme Court as so many oracular
> revelations of constitutional meaning.
> A leading liberal scholar, Leonard Levy (a jew), has gone so far as to
> say that what matters is not what the Constitution says, but what the
> Court has said about the Constitution in more than 400 volumes of
> commentary.
> This can only mean that the commentary has displaced the original
> text, and that "We the People" have been supplanted by "We the
> Lawyers."
> We the People can't read and understand our own Constitution. We have
> to have it explained to us by the professionals. Moreover, if the
> Court enjoys oracular status, it can't really be criticized, because
> it can do no wrong.
> We may dislike its results, but future rulings will have to be derived

> from them as precedents, rather than from the text and logic of the
> Constitution.
> And notice that the "conservative" justices appointed by Republican
> presidents have by and large upheld not the original Constitution, but
> the most liberal interpretations of the Court itself - notably on the
> subject of abortion, which I'll return to in a minute.
> To sum up this little constitutional history.
> The history of the Constitution is the story of its inversion. The
> original understanding of the Constitution has been reversed.
> The Constitution creates a presumption against any power not plainly
> delegated to the federal government and a corresponding presumption in
> favor of the rights and powers of the states and the people. But we
> now have a sloppy presumption in favor of federal power.
> Most people assume the federal government can do anything it isn't
> plainly forbidden to do.
> The Ninth and Tenth Amendments were adopted to make the principle of
> the Constitution as clear as possible.
> Hamilton argued against adding a Bill of Rights, on grounds that it
> would be redundant and confusing. He thought it would seem to imply
> that the federal government had more powers than it had been given.
> Why say, he asked, that the freedom of the press shall not be
> infringed, when the federal government would have no power by which it
> could be infringed?
> And you can even make the case that he was exactly right. He
> understood, at any rate, that our freedom is safer if we think of the
> Constitution as a list of powers rather than as a list of rights. Be
> that as it may, the Bill of Rights was adopted, but it was designed to
> meet his objection.
> The Ninth Amendment says: "The enumeration in the Constitution of
> certain rights shall not be construed to deny or disparage others
> retained by the people."
> The Tenth says: "The powers not delegated to the United States by the
> Constitution, nor prohibited by it to the States, are reserved to the
> States respectively, or to the people."
> Now what these two provisions mean is pretty simple. The Ninth means
> that the list of the people's rights in the Constitution is not meant
> to be complete - that they still have many other rights, like the
> right to travel or to marry, which may deserve just as much respect as
> the right not to have soldiers quartered in one's home in peacetime.
> The Tenth, on the other hand, means that the list of powers
> "delegated" to the federal government is complete - and that any other
> powers the government assumed would be, in the Framers' habitual word,
> "usurped".
> As I said earlier, the Founders believed that our rights come from
> God, and the government's powers come from us. So the Constitution
> can't list all our rights, but it can and does list all the federal
> government's powers.
> You can think of the Constitution as a sort of antitrust act for
> government, with the Ninth and Tenth Amendments at its core. It's

> remarkable that the same liberals who think business monopolies are
> sinister think monopolies of political power are progressive.
> When they can't pass their programs because of the constitutional
> safeguards, they complain about "gridlock" - a clich&#65533; that shows they
> miss the whole point of the enumeration and separation of powers.
> Well, I don't have to tell you that this way of thinking is absolutely
> alien to that of today's politicians and pundits.
> Can you imagine John Kerry, George Bush, Al Gore, Dan Rostenkowski, or
> even Tom Brokaw having a conversation about political principles with
> any of the Founding Fathers? If you can, you must have a vivid fantasy
> life. And the result of the loss of our original political idiom has
> been, as I say, to invert the original presumptions.
> The average American, whether he has had high-school civics or a
> degree in political science, is apt to assume that the Constitution
> somehow empowers the government to do nearly anything, while
> implicitly limiting our rights by listing them.
> Not that anyone would say it this way, but it's as if the Bill of
> Rights had said that the enumeration of the federal government's
> powers in the Constitution is not meant to deny or disparage any other
> powers it may choose to claim, while the rights not given to the
> people in the Constitution are reserved to the federal government to
> give or withhold, and the states may be progressively stripped of
> their original powers.
> What it comes down to is that we don't really have an operative
> Constitution anymore. The federal government defines its own powers
> day by day. It's limited not by the list of its powers in the
> Constitution, but by whatever it can get away with politically.
> Just as the president can now send troops abroad to fight without a
> declaration of war, Congress can pass a national health care program
> without a constitutional delegation of power. The only restraint left
> is political opposition.
> If you suspect I'm overstating the change from our original
> principles, I give you the late Justice Hugo Black. In a 1965 case
> called Griswold v. Connecticut, the Court struck down a law forbidding
> the sale of contraceptives on grounds that it violated a right of
> "privacy." (This supposed right, of course, became the basis for the
> Court's even more radical 1973 ruling in Roe v. Wade, but that's
> another story.)
> Justice Black dissented in the Griswold case on the following ground:
> "I like my privacy as well as the next [man]," he wrote, "but I am
> nevertheless compelled to admit that government has a right to invade
> it unless prohibited by some specific constitutional provision."
> What a hopelessly muddled - and really sinister - misconception of the
> relation between the individual and the state: government has a right
> to invade our privacy, unless prohibited by the Constitution.
> You don't have to share the Court's twisted view of the right of
> privacy in order to be shocked that one of its members takes this view
> of the "right" of government to invade privacy.
> It gets crazier. In 1993 the Court handed down one of the most bizarre

> decisions of all time.
> For two decades, enemies of legal abortion had been supporting
> Republican candidates in the hope of filling the Court with appointees
> who would review Roe v. Wade.
> In Planned Parenthood v. Casey, the Court finally did so. But even
> with eight Republican appointees on the Court, the result was not what
> the conservatives had hoped for. The Court reaffirmed Roe.
> Its reasoning was amazing. A plurality opinion - a majority of the
> five-justice majority in the case - admitted that the Court's previous
> ruling in Roe might be logically and historically vulnerable.
> But it held that the paramount consideration was that the Court be
> consistent, and not appear to be yielding to public pressure, lest it
> lose the respect of the public. Therefore the Court allowed Roe to
> stand.
> Among many things that might be said about this ruling, the most basic
> is this: The Court in effect declared itself a third party to the
> controversy, and then, setting aside the merits of the two principals'
> claims, ruled in its own interest!
> It was as if the referee in a prizefight had declared himself the
> winner. Cynics had always suspected that the Court did not forget its
> self-interest in its decisions, but they never expected to hear it say
> so.
> The three justices who signed that opinion evidently didn't realize
> what they were saying. A distinguished veteran Court-watcher (who
> approved of Roe, by the way) told me he had never seen anything like
> it.
> The Court was actually telling us that it put its own welfare ahead of
> the merits of the arguments before it. In its confusion, it was
> blurting out the truth.
> But by then, very few Americans could even remember the original
> constitutional plan. The original plan was as Madison and Tocqueville
> described it: State government was to be the rule, federal government
> the exception.
> The states' powers were to be "numerous and indefinite", federal
> powers "few and defined." This is a matter not only of history, but of
> iron logic: the Constitution doesn't make sense when read any other
> way. As Madison asked, why bother listing particular federal powers
> unless unlisted powers are withheld?
> The unchecked federal government has not only overflowed its banks; it
> has even created its own economy.
> Thanks to its exercise of a myriad of unwarranted powers, it can claim
> tens of millions of dependents, at least part of whose income is due
> to the abuse of the taxing and spending powers for their benefit:
> government employees, retirees, farmers, contractors, teachers,
> artists, even soldiers.
> Large numbers of these people are paid much more than their market
> value because the taxpayer is forced to subsidize them.
> By the same token, most taxpayers would instantly be better off if the

>>I think it's WAY too late to reverse the direction we're heading, and
>>there's a lot more that can be said here, but it's important for you
>>to know the facts before you lose what you had.
>>
>>Please ... read on.
>>
>>How Tyranny Came to America
>>==========
>>One of the great goals of education is to initiate the young into the
>>conversation of their ancestors; to enable them to understand the
>>language of that conversation, in all its subtlety, and maybe even, in
>>their maturity, to add to it some wisdom of their own.
>>The modern American educational system no longer teaches us the
>>political language of our ancestors. In fact our schooling helps widen
>>the gulf of time between our ancestors and ourselves, because much of
>>what we are taught in the name of civics, political science, or
>>American history is really modern liberal propaganda.
>>Sometimes this is deliberate. Worse yet, sometimes it isn't. Our
>>ancestral voices have come to sound alien to us, and therefore our own
>>moral and political language is impoverished. It's as if the people of
>>England could no longer understand Shakespeare, or Germans couldn't
>>comprehend Mozart and Beethoven.
>>So to most Americans, even those who feel oppressed by what they call
>>big government, it must sound strange to hear it said, in the past
>>tense, that tyranny "came" to America. After all, we have a
>>constitution, don't we?
>>We've abolished slavery and segregation. We won two world wars and the
>>Cold War. We still congratulate ourselves before every ballgame on
>>being the Land of the Free. And we aren't ruled by some fanatic with a
>>funny mustache who likes big parades with thousands of soldiers
>>goose-stepping past huge pictures of himself.
>>For all that, we no longer fully have what our ancestors, who framed
>>and ratified our Constitution, thought of as freedom - a careful

>>division of power that prevents power from becoming concentrated and
>>unlimited.
>>The word they usually used for concentrated power was consolidated - a
>>rough synonym for fascist. And the words they used for any excessive
>>powers claimed or exercised by the state were usurped and tyrannical.
>>They would consider the modern "liberal" state tyrannical in
>>principle; they would see in it not the opposite of the fascist,
>>communist, and socialist states, but their sister.
>>If Washington and Jefferson, Madison, and Hamilton could come back,
>>the first thing they'd notice would be that the federal government now
>>routinely assumes thousands of powers never assigned to it - powers
>>never granted, never delegated, never enumerated.
>>These were the words they used, and it's a good idea for us to learn
>>their language.
>>They would say that we no longer live under the Constitution they
>>wrote. And the Americans of a much later era - the period from
>>Cleveland to Coolidge, for example - would say we no longer live even
>>under the Constitution they inherited and amended.
>>I call the present system "Post-Constitutional America." As I
>>sometimes put it, the U.S. Constitution poses no serious threat to our
>>form of government.
>>What's worse is that our constitutional illiteracy cuts us off from
>>our own national heritage. And so our politics degenerates into
>>increasingly bitter and unprincipled quarrels about who is going to
>>bear the burdens of war and welfare.
>>I don't want to sound like an oracle on this subject. As a typical
>>victim of modern public education and a disinformed citizen of this
>>media-ridden country, I took a long time - an embarrassingly long time
>>- to learn what I'm passing on.
>>It was like studying geometry in old age, and discovering how simple
>>the basic principles of space really are. It was the old story: In
>>order to learn, first I had to unlearn.
>>Most of what I'd been taught and told about the Constitution was
>>misguided or even false. And I'd never been told some of the most
>>elementary things, which would have saved me a tremendous amount of
>>confusion.
>>The Constitution does two things.
>>First, it delegates certain enumerated powers to the federal
>>government. Second, it separates those powers among the three
>>branches.
>>Most people understand the secondary principle of the separation of
>>powers. But they don't grasp the primary idea of delegated and
>>enumerated powers.
>>Consider this. We have recently had a big national debate over
>>national health care. Advocates and opponents argued long and loud
>>over whether it could work, what was fair, how to pay for it, and so
>>forth.
>>But almost nobody raised the basic issue: Where does the federal
>>government get the power to legislate in this area? The answer is:
>>NOWHERE.

>>The Constitution lists 18 specific legislative powers of Congress, and
>>not a one of them covers national health care.
>>As a matter of fact, none of the delegated powers of Congress - and
>>delegated is always the key word - covers Social Security, or
>>Medicaid, or Medicare, or federal aid to education, or most of what
>>are now miscalled "civil rights," or countless public works projects,
>>or equally countless regulations of business, large and small, or the
>>space program, or farm subsidies, or research grants, or subsidies to
>>the arts and humanities, or ... well, you name it, chances are, it's
>>unconstitutional.
>>Even the most cynical opponents of the Constitution would be
>>dumbfounded to learn that the federal government now tells us where we
>>can smoke. We are less free, more heavily taxed, and worse governed
>>than our ancestors under British rule. Sometimes this government makes
>>me wonder: Was George III really all that bad?
>>Let's be clear about one thing.
>>Constitutional and unconstitutional aren't just simple terms of
>>approval and disapproval. A bad law may be perfectly constitutional. A
>>wise and humane law may be unconstitutional. But what is almost
>>certainly bad is a constant disposition to thwart or disregard the
>>Constitution.
>>It's not just a matter of what is sometimes called the "original
>>intent" of the authors of the Constitution. What really matters is the
>>common, explicit, unchallenged understanding of the Constitution, on
>>all sides, over several generations. There was no mystery about it.
>>The logic of the Constitution was so elegantly simple that a foreign
>>observer could explain it to his countrymen in two sentences.
>>Alexis de Tocqueville wrote that "the attributes of the federal
>>government were carefully defined [in the Constitution], and all that
>>was not included among them was declared to remain to the governments
>>of the individual states. Thus the government of the states remained
>>the rule, and that of the federal government the exception".
>>The Declaration of Independence, which underlies the Constitution,
>>holds that the rights of the people come from God, and that the powers
>>of the government come from the people.
>>Let me repeat that: According to the Declaration of Independence, the
>>rights of the people come from God, and the powers of the government
>>come from the people. Unless you grasp this basic order of things,
>>you'll have a hard time understanding the Constitution.
>>The Constitution was the instrument by which the American people
>>granted, or delegated, certain specific powers to the federal
>>government. Any power not delegated was withheld, or "reserved".
>>As we'll see later, these principles are expressed particularly in the
>>Ninth and Tenth Amendments, two crucial but neglected provisions of
>>the Constitution. Let me say it yet again: The rights of the people
>>come from God. The powers of government come from the people.
>>The American people delegated the specific powers they wanted the
>>federal government to have through the Constitution. Any additional
>>powers they wanted to grant were supposed to be added by amendment.
>>It's largely because we've forgotten these simple principles that the

>>country is in so much trouble. The powers of the federal government
>>have multiplied madly, with only the vaguest justifications and on the
>>most slippery pretexts.
>>Its chief business now is not defending our rights but taking and
>>redistributing our wealth. It has even created its own economy, the
>>tax economy, which is parasitical on the basic and productive
>>voluntary economy.
>>Even much of what passes for "national defense" is a kind of hidden
>>entitlement program, as was illustrated when President George Bush
>>warned some states during the 1992 campaign that Bill Clinton would
>>destroy jobs by closing down military bases.
>>Well, if those bases aren't necessary for our defense, they should be
>>closed down.
>>Now of course nobody in American politics, not even the most fanatical
>>liberal, will admit openly that he doesn't care what the Constitution
>>says and isn't going to let it interfere with his agenda.
>>Everyone professes to respect it - even the Supreme Court. That's the
>>problem. The U.S. Constitution serves the same function as the British
>>royal family: it offers a comforting symbol of tradition and
>>continuity, thereby masking a radical change in the actual system of
>>power.
>>So the people who mean to do without the Constitution have come up
>>with a slogan to keep up appearances: they say the Constitution is a
>>"living document", which sounds like a compliment.
>>They say it has "evolved" in response to "changing circumstances,"
>>etc. They sneer at the idea that such a mystic document could still
>>have the same meanings it had two centuries ago, or even, I guess,
>>sixty years ago, just before the evolutionary process started
>>accelerating with fantastic velocity.
>>These people, who tend with suspicious consistency to be liberals,
>>have discovered that the Constitution, whatever it may have meant in
>>the past, now means - again, with suspicious consistency - whatever
>>suits their present convenience.
>>Do liberals want big federal entitlement programs? Lo, the Interstate
>>Commerce Clause turns out to mean that the big federal programs are
>>constitutional!
>>Do liberals oppose capital punishment? Lo, the ban on "cruel and
>>unusual punishment" turns out to mean that capital punishment is
>>unconstitutional!
>>Do liberals want abortion on demand? Lo, the Ninth and Fourteenth
>>Amendments, plus their emanations and penumbras, turn out to mean that
>>abortion is nothing less than a woman's constitutional right!
>>Can all this be blind evolution? If liberals were more religious, they
>>might suspect the hand of Providence behind it! This marvelous "living
>>document" never seems to impede the liberal agenda in any way.
>>On the contrary: it always seems to demand, by a wonderful
>>coincidence, just what liberals are prescribing on other grounds.
>>Take abortion. Set aside your own views and feelings about it. Is it
>>really possible that, as the Supreme Court in effect said, all the
>>abortion laws of all 50 states - no matter how restrictive, no matter

>>how permissive - had always been unconstitutional?
>>Not only that, but no previous Court, no justice on any Court in all
>>our history - not Marshall, not Story, not Taney, not Holmes, not
>>Hughes, not Frankfurter, not even Warren - had ever been recorded as
>>doubting the constitutionality of those laws. Everyone had always
>>taken it for granted that the states had every right to enact them.
>>Are we supposed to believe, in all seriousness, that the Court's
>>ruling in Roe v. Wade was a response to the text of the Constitution,
>>the discernment of a meaning that had eluded all its predecessors,
>>rather than an enactment of the current liberal agenda? Come now.
>>And notice that the parts of this "living document" don't develop
>>equally or consistently. The Court has expanded the meaning of some of
>>liberalism's pet rights, such as freedom of speech, to absurd lengths;
>>but it has neglected or even contracted other rights, such as property
>>rights, which liberalism is hostile to.
>>In order to appreciate what has happened, you have to stand back from
>>all the details and look at the outline. What follows is a thumbnail
>>history of the Constitution.
>>In the beginning the states wereindependentandsovereign.Thatis
>>why they were called "states": a state was not yet thought of as a
>>mere subdivision of a larger unit, as is the case now.
>>The universal understanding was that in ratifying the Constitution,
>>the 13 states yielded a very little of their sovereignty, but kept
>>most of it.
>>Those who were reluctant to ratify generally didn't object to the
>>powers the Constitution delegated to the federal government. But they
>>were suspicious: they wanted assurance that if those few powers were
>>granted, other powers, never granted, wouldn't be seized too.
>>In The Federalist, Hamilton and Madison argued at some length that
>>under the proposed distribution of power the federal government would
>>never be able to "usurp", as they put it, those other powers.
>>Madison wrote soothingly in Federalist No. 45 that the powers of the
>>federal government would be "few and defined," relating mostly to war
>>and foreign policy, while those remaining with the states would be
>>"numerous and indefinite", and would have to do with the everyday
>>domestic life of the country.
>>The word usurpation occurs numberless times in the ratification
>>debates, reflecting the chief anxiety the champions of the
>>Constitution had to allay. And as a final assurance, the Tenth
>>Amendment stipulated that the powers not "delegated" to the federal
>>government were "reserved" to the separate states and to the people.
>>But this wasn't enough to satisfy everyone.
>>Well-grounded fears persisted. And during the first half of the
>>nineteenth century, nearly every president, in his inaugural message,
>>felt it appropriate to renew the promise that the powers of the
>>federal government would not be exceeded, nor the reserved powers of
>>the states transgressed.
>>The federal government was to remain truly federal, with only a few
>>specified powers, rather than "consolidated" with unlimited powers.
>>The Civil War, or the War Between the States if you like, resulted

>>from the suspicion that the North meant to use the power of the Union
>>to destroy the sovereignty of the Southern states.
>>Whether or not that suspicion was justified, the war itself produced
>>that very result. The South was subjugated and occupied like a
>>conquered country. Its institutions were profoundly remade by the
>>federal government; the United States of America was taking on the
>>character of an extensive, and highly centralized, empire.
>>Similar processes were under way in Europe, as small states were
>>consolidated into large ones, setting the stage for the tyrannies and
>>gigantic wars of the twentieth century.
>>Even so, the three constitutional amendments ratified after the war
>>contain a significant clause: "Congress shall have power to enforce
>>this article by appropriate legislation".
>>Why is this significant? Because it shows that even the conquerors
>>still understood that a new power of Congress required a
>>constitutional amendment. It couldn't just be taken by majority vote,
>>as it would be today.
>>If the Congress then had wanted a national health plan, it would have
>>begun by asking the people for an amendment to the Constitution
>>authorizing it to legislate in the area of health care.
>>The immediate purpose of the Fourteenth Amendment was to provide a
>>constitutional basis for a proposed civil rights act. But the Supreme
>>Court soon found other uses for the Fourteenth Amendment. It began
>>striking down state laws as unconstitutional.
>>This was an important new twist in American constitutional law.
>>Hamilton, in arguing for judicial review in Federalist No. 78, had
>>envisioned the Court as a check on Congress, resisting the illicit
>>consolidation or centralization of power.
>>And our civics books still describe the function of checks and
>>balances in terms of the three branches of the federal government
>>mutually controlling each other.
>>But in fact, the Court was now countermanding the state legislatures,
>>where the principle of checks and balances had no meaning, since those
>>state legislatures had no reciprocal control on the Court. This
>>development eventually set the stage for the convulsive Supreme Court
>>rulings of the late twentieth century, from Brown v. Board of
>>Education to Roe v. Wade.
>>The big thing to recognize here is that the Court had become the very
>>opposite of the institution Hamilton and others had had in mind.
>>Instead of blocking the centralization of power in the federal
>>government, the Court was assisting it.
>>The original point of the federal system was that the federal
>>government would have very little to say about the internal affairs of
>>the states. But the result of the Civil War was that the federal
>>government had a great deal to say about those affairs - in Northern
>>as well as Southern states.
>>Note that this trend toward centralization was occurring largely under
>>Republican presidents.
>>The Democrat Grover Cleveland was one of the last great spokesmen for
>>federalism. He once vetoed a modest $10,000 federal grant for drought

>>relief on grounds that there was no constitutional power to do it.
>>If that sounds archaic, remember that the federal principle remained
>>strong long enough that during the 1950s, the federal highway program
>>had to be called a "defense" measure in order to win approval, and
>>federal loans to college students in the 1960s were absurdly called
>>"defense" loans for the same reason.
>>The Tenth Amendment is a refined taste, but it has always had a few
>>devotees. But federalism suffered some serious wounds during the
>>presidency of Woodrow Wilson.
>>First came the income tax, its constitutionality established by the
>>Sixteenth Amendment; this meant that every U.S. citizen was now, for
>>the first time, directly accountable to the federal government.
>>Then the Seventeenth Amendment required that senators be elected by
>>popular vote rather than chosen by state legislators; this meant that
>>the states no longer had their own representation in Congress, so that
>>they now lost their remaining control over the federal government.
>>The Eighteenth Amendment, establishing Prohibition, gave the federal
>>government even greater powers over the country's internal affairs.
>>All these amendments were ominous signs that federalism was losing its
>>traditional place in the hearts, and perhaps the minds, of Americans.
>>But again, notice that these expansions of federal power were at least
>>achieved by amending the Constitution, as the Constitution itself
>>requires. The Constitution doesn't claim to be a "living document". It
>>is written on paper, not rubber.
>>In fact, the radicals of the early twentieth century despaired of
>>achieving socialism or communism as long as the Constitution remained.
>>They regarded it as the critical obstacle to their plans, and thought
>>a revolution would be necessary to remove it. As The New Republic
>>wrote: "To have a socialist society we must have a new Constitution."
>>That's laying it on the line!
>>Unfortunately, the next generation of collectivists would be less
>>candid in their contempt for the federal system. Once they learned to
>>feign devotion to the Constitution they secretly regarded as obsolete,
>>the laborious formality of amendment would no longer be necessary.
>>They could merely pretend that the Constitution was on their side.
>>After Franklin Roosevelt restaffed the Supreme Court with his
>>compliant cronies, the federal government would be free to make up its
>>own powers as it went along, thanks to the notion that the
>>Constitution was a malleable "living document" whose central meaning
>>could be changed, and even reversed, by ingenious interpretation.
>>Roosevelt's New Deal brought fascist-style central planning to America
>>- what some call the "mixed economy" but Hilaire Belloc called the
>>Servile State - and his highhanded approach to governance soon led to
>>conflict with the Court, which found several of his chief measures
>>unconstitutional.
>>Early in his second term, Roosevelt retaliated by trying to "pack" the
>>Court by increasing the number of seats. This power play alienated
>>even many of his allies, but it turned out not to be necessary.
>>After 1937, the Court began seeing things Roosevelt's way. It voted as
>>he wished; several members obligingly retired; and soon he had

>>appointed a majority of the justices. The country virtually got a new
>>Constitution.
>>Roosevelt's Court soon decided that the Tenth Amendment was a "truism"
>>of no real force. This meant that almost any federal act was ipso
>>facto constitutional, and the powers "reserved" to the states and the
>>people were just leftovers the federal government didn't want, like
>>the meal left for the jackals by the satisfied lion.
>>There was almost no limit, now, on what the federal government could
>>do. In effect, the powers of the federal government no longer had to
>>come from the people by constitutional delegation: they could be
>>created by simple political power.
>>Roosevelt also set the baneful precedent of using entitlement
>>programs, such as Social Security, to buy some people's votes with
>>other people's money. It was both a fatal corruption of democracy and
>>the realization of the Servile State in America. The class of voting
>>parasites has been swelling ever since.
>>So the New Deal didn't just expand the power of the federal
>>government; that had been done before. The New Deal did much deeper
>>mischief: it struck at the whole principle of constitutional
>>resistance to federal expansion.
>>Congress didn't need any constitutional amendment to increase its
>>powers; it could increase its own powers ad hoc, at any time, by
>>simple majority vote. All this, of course, would have seemed monstrous
>>to our ancestors.
>>Even Alexander Hamilton, who favored a relatively strong central
>>government in his time, never dreamed of a government so powerful.
>>The Court suffered a bloody defeat at Roosevelt's hands, and since his
>>time it has never found a major act of Congress unconstitutional.
>>This has allowed the power of the federal government to grow without
>>restraint. At the federal level, "checks and balances" has ceased to
>>include judicial review.
>>This is a startling fact, flying as it does in the face of the
>>familiar conservative complaints about the Court's "activism". When it
>>comes to Congress, the Court has been absolutely passive.
>>As if to compensate for its habit of capitulation to Congress, the
>>Court's post-World War II "activism" has been directed entirely
>>against the states, whose laws it has struck down in areas that used
>>to be considered their settled and exclusive provinces.
>>Time after time, it has found "unconstitutional" laws whose legitimacy
>>had stood unquestioned throughout the history of the Republic.
>>Notice how total the reversal of the Court's role has been. It began
>>with the duty, according to Hamilton, of striking down new seizures of
>>power by Congress. Now it finds constitutional virtually everything
>>Congress chooses to do.
>>The federal government has assumed myriads of new powers nowhere
>>mentioned or implied in the Constitution, yet the Court has never
>>seriously impeded this expansion, or rather explosion, of novel claims
>>of power. What it finds unconstitutional are the traditional powers of
>>the states.
>>The postwar Court has done pioneering work in one notable area: the

>>separation of church and state. I said "pioneering", not praiseworthy.
>>The Court has consistently imposed an understanding of the First
>>Amendment that is not only exaggerated but unprecedented - most
>>notoriously in its 1962 ruling that prayer in public schools amounts
>>to an "establishment of religion".
>>This interpretation of the Establishment Clause has always been to the
>>disadvantage of Christianity and of any law with roots in Christian
>>morality. And it's impossible to doubt that the justices who voted for
>>this interpretation were voting their predilections.
>>Maybe that's the point. I've never heard it put quite this way, but
>>the Court's boldest rulings showed something less innocent than a
>>series of honest mistakes.
>>Studying these cases and others of the Court's liberal heyday, one
>>never gets the sense that the majority was suppressing its own
>>preferences; it was clearly enacting them.
>>Those rulings can be described as wishful thinking run amok, and
>>touched with more than a little arrogance. All in all, the Court
>>displayed the opposite of the restrained and impartial temperament one
>>expects even of a traffic-court judge, let alone a Supreme Court.
>>It's ironic to recall Hamilton's assurance that the Supreme Court
>>would be "the least dangerous" of the three branches of the federal
>>government.
>>But Hamilton did give us a shrewd warning about what would happen if
>>the Court were ever corrupted: in Federalist No. 78, he wrote that
>>"liberty can have nothing to fear from the judiciary alone, but would
>>have everything to fear from its union with either of the other
>>[branches]."
>>Since Franklin Roosevelt, as I've said, the judiciary has in effect
>>formed a union with the other two branches to aggrandize the power of
>>the federal government at the expense of the states and the people.
>>This, in outline, is the constitutional history of the United States.
>>You won't find it in the textbooks, which are required to be
>>optimistic, to present degeneration as development, and to treat the
>>successive pronouncements of the Supreme Court as so many oracular
>>revelations of constitutional meaning.
>>A leading liberal scholar, Leonard Levy (a jew), has gone so far as to
>>say that what matters is not what the Constitution says, but what the
>>Court has said about the Constitution in more than 400 volumes of
>>commentary.
>>This can only mean that the commentary has displaced the original
>>text, and that "We the People" have been supplanted by "We the
>>Lawyers."
>>We the People can't read and understand our own Constitution. We have
>>to have it explained to us by the professionals. Moreover, if the
>>Court enjoys oracular status, it can't really be criticized, because
>>it can do no wrong.
>>We may dislike its results, but future rulings will have to be derived
>>from them as precedents, rather than from the text and logic of the
>>Constitution.
>>And notice that the "conservative" justices appointed by Republican

>>presidents have by and large upheld not the original Constitution, but
>>the most liberal interpretations of the Court itself - notably on the
>>subject of abortion, which I'll return to in a minute.
>>To sum up this little constitutional history.
>>The history of the Constitution is the story of its inversion. The
>>original understanding of the Constitution has been reversed.
>>The Constitution creates a presumption against any power not plainly
>>delegated to the federal government and a corresponding presumption in
>>favor of the rights and powers of the states and the people. But we
>>now have a sloppy presumption in favor of federal power.
>>Most people assume the federal government can do anything it isn't
>>plainly forbidden to do.
>>The Ninth and Tenth Amendments were adopted to make the principle of
>>the Constitution as clear as possible.
>>Hamilton argued against adding a Bill of Rights, on grounds that it
>>would be redundant and confusing. He thought it would seem to imply
>>that the federal government had more powers than it had been given.
>>Why say, he asked, that the freedom of the press shall not be
>>infringed, when the federal government would have no power by which it
>>could be infringed?
>>And you can even make the case that he was exactly right. He
>>understood, at any rate, that our freedom is safer if we think of the
>>Constitution as a list of powers rather than as a list of rights. Be
>>that as it may, the Bill of Rights was adopted, but it was designed to
>>meet his objection.
>>The Ninth Amendment says: "The enumeration in the Constitution of
>>certain rights shall not be construed to deny or disparage others
>>retained by the people."
>>The Tenth says: "The powers not delegated to the United States by the
>>Constitution, nor prohibited by it to the States, are reserved to the
>>States respectively, or to the people."
>>Now what these two provisions mean is pretty simple. The Ninth means
>>that the list of the people's rights in the Constitution is not meant
>>to be complete - that they still have many other rights, like the
>>right to travel or to marry, which may deserve just as much respect as
>>the right not to have soldiers quartered in one's home in peacetime.
>>The Tenth, on the other hand, means that the list of powers
>>"delegated" to the federal government is complete - and that any other
>>powers the government assumed would be, in the Framers' habitual word,
>>"usurped".
>>As I said earlier, the Founders believed that our rights come from
>>God, and the government's powers come from us. So the Constitution
>>can't list all our rights, but it can and does list all the federal
>>government's powers.
>>You can think of the Constitution as a sort of antitrust act for
>>government, with the Ninth and Tenth Amendments at its core. It's
>>remarkable that the same liberals who think business monopolies are
>>sinister think monopolies of political power are progressive.
>>When they can't pass their programs because of the constitutional
>>safeguards, they complain about "gridlock" - a clichï¿½ that shows they

>>miss the whole point of the enumeration and separation of powers.
>>Well, I don't have to tell you that this way of thinking is absolutely
>>alien to that of today's politicians and pundits.
>>Can you imagine John Kerry, George Bush, Al Gore, Dan Rostenkowski, or
>>even Tom Brokaw having a conversation about political principles with
>>any of the Founding Fathers? If you can, you must have a vivid fantasy
>>life. And the result of the loss of our original political idiom has
>>been, as I say, to invert the original presumptions.
>>The average American, whether he has had high-school civics or a
>>degree in political science, is apt to assume that the Constitution
>>somehow empowers the government to do nearly anything, while
>>implicitly limiting our rights by listing them.
>>Not that anyone would say it this way, but it's as if the Bill of
>>Rights had said that the enumeration of the federal government's
>>powers in the Constitution is not meant to deny or disparage any other
>>powers it may choose to claim, while the rights not given to the
>>people in the Constitution are reserved to the federal government to
>>give or withhold, and the states may be progressively stripped of
>>their original powers.
>>What it comes down to is that we don't really have an operative
>>Constitution anymore. The federal government defines its own powers
>>day by day. It's limited not by the list of its powers in the
>>Constitution, but by whatever it can get away with politically.
>>Just as the president can now send troops abroad to fight without a
>>declaration of war, Congress can pass a national health care program
>>without a constitutional delegation of power. The only restraint left
>>is political opposition.
>>If you suspect I'm overstating the change from our original
>>principles, I give you the late Justice Hugo Black. In a 1965 case
>>called Griswold v. Connecticut, the Court struck down a law forbidding
>>the sale of contraceptives on grounds that it violated a right of
>>"privacy." (This supposed right, of course, became the basis for the
>>Court's even more radical 1973 ruling in Roe v. Wade, but that's
>>another story.)
>>Justice Black dissented in the Griswold case on the following ground:
>>"I like my privacy as well as the next [man]," he wrote, "but I am
>>nevertheless compelled to admit that government has a right to invade
>>it unless prohibited by some specific constitutional provision."
>>What a hopelessly muddled - and really sinister - misconception of the
>>relation between the individual and the state: government has a right
>>to invade our privacy, unless prohibited by the Constitution.
>>You don't have to share the Court's twisted view of the right of
>>privacy in order to be shocked that one of its members takes this view
>>of the "right" of government to invade privacy.
>>It gets crazier. In 1993 the Court handed down one of the most bizarre
>>decisions of all time.
>>For two decades, enemies of legal abortion had been supporting
>>Republican candidates in the hope of filling the Court with appointees
>>who would review Roe v. Wade.
>>In Planned Parenthood v. Casey, the Court finally did so. But even

>>with eight Republican appointees on the Court, the result was not what
>>the conservatives had hoped for. The Court reaffirmed Roe.
>>Its reasoning was amazing. A plurality opinion - a majority of the
>>five-justice majority in the case - admitted that the Court's previous
>>ruling in Roe might be logically and historically vulnerable.
>>But it held that the paramount consideration was that the Court be
>>consistent, and not appear to be yielding to public pressure, lest it
>>lose the respect of the public. Therefore the Court allowed Roe to
>>stand.
>>Among many things that might be said about this ruling, the most basic
>>is this: The Court in effect declared itself a third party to the
>>controversy, and then, setting aside the merits of the two principals'
>>claims, ruled in its own interest!
>>It was as if the referee in a prizefight had declared himself the
>>winner. Cynics had always suspected that the Court did not forget its
>>self-interest in its decisions, but they never expected to hear it say
>>so.
>>The three justices who signed that opinion evidently didn't realize
>>what they were saying. A distinguished veteran Court-watcher (who
>>approved of Roe, by the way) told me he had never seen anything like
>>it.
>>The Court was actually telling us that it put its own welfare ahead of
>>the merits of the arguments before it. In its confusion, it was
>>blurting out the truth.
>>But by then, very few Americans could even remember the original
>>constitutional plan. The original plan was as Madison and Tocqueville
>>described it: State government was to be the rule, federal government
>>the exception.
>>The states' powers were to be "numerous and indefinite", federal
>>powers "few and defined." This is a matter not only of history, but of
>>iron logic: the Constitution doesn't make sense when read any other
>>way. As Madison asked, why bother listing particular federal powers
>>unless unlisted powers are withheld?
>>The unchecked federal government has not only overflowed its banks; it
>>has even created its own economy.
>>Thanks to its exercise of a myriad of unwarranted powers, it can claim
>>tens of millions of dependents, at least part of whose income is due
>>to the abuse of the taxing and spending powers for their benefit:
>>government employees, retirees, farmers, contractors, teachers,
>>artists, even soldiers.
>>Large numbers of these people are paid much more than their market
>>value because the taxpayer is forced to subsidize them.
>>By the same token, most taxpayers would instantly be better off if the

Indeed, it is reasonable to believe that said extremists would consider
their moderate brethren to be infidels worthy of the same fate, should they
actively condemn their actions.

Actually, except for the stoning part (which I don't know about as yet),
that's pretty much the way women live in Iraq now. Before, they were about
as equal to males as the ones here in Korea have become in the past 20
years. I was very disappointed to hear that the new Iraqi government had
set back women's rights there 500 years.. :(

I agree, and it's the disingenuous claim to "objectivity" that
transforms liberal journalism from something one just has to live with
to something annoying. I would find the overwrought bleating about
Fox News far less hypocritical if it didn't come mostly from quarters
that are completely silent about the biases of NPR, CNN, the BBC, the
New York Times, and other organs of conventional liberalism.

Now, of course, there's wicked (i.e., non-liberal) Fox, and suddenly
objectivity is a big issue.

I don't like scrolling down through repetitive "crap" when I'm reading a NG,
but I will bottom post a reference in case someone is just tuning in.

But thanks for answering my question. The GE Super Radios I was familiar with
did not have this feature. I'm one of the dummies.

The whole episode sure looks like Nazi style atrocities by the Russians.
Just like the 3000 Polish officers they killed during the war and blamed
on the Germans. They hid that for fifty years.

The Russian lovers on this group will be by shortly to explain WHY
ethnic cleansing and genocide are good. They also LOVE Ashcroft, Perle
and Wolfowitz. Note the absence of these war mongering luminaries since
the War on Iraq started going so badly. Cockroaches hate light too.

>
Another concept that totally indicts the competency about MANY of those
who complain about Fox is that the complainers tend to have little ability
to distinguish between editorial bias and news bias. With Fox, one
would notice that the NEWS information is relatively unbiased in
the sense that it isn't as biased as the anti-Fox forces bleat. Fox
certainly has plenty of BIASED commentators, however. Where Fox
appears to try to maintain a REASONABLE, but imperfect, balance of left
and right wing guests on any given show, and the purely political shows
like Hannity and Colmes does try to maintain balance -- it is very clear
that CNN tends to leave the right wing side of the equation relatively
weak.

The NEWS shows should be relatively balanced (as Fox does a tolerable
job of presenting the NEWS), while the commentary
shows shouldn't be presented in misleadingly pure news-reader format
(for example, Dan Rather's program seems to have strong opinion/editorial
bias, but is misleadingly sold as a news show.) O'Reilly is a
commentator/opinion show -- O'Reilly doesn't have the same kind of
obvious newsreader format as Dan Rather... Yet, you'll find that Dan
is quite biased, but he shouldnt' be, because he is supposed to be
the 'CBS Evening News', not 'opinions of the Executive Producer,
Dan Rather.' On the other hand, the 'OReilly Factor' is obviously

a show that has something to do with OReilly's opinions.

The extreme-leftists (or overly sensitive leftists) are obviously offended by the presentation of right wing opinion on Fox News. However, there is certainly some fairly serious left wing opinion on Fox also. Geesh, on CNN, they have a couple of ACTIVE political operatives for one of the presidential candidates as leftist commentators!!! The right wing CNN commentators are much less prominent than the CURRENTLY ACTIVE lefties.

It would be nice if Fox wasn't the predominant television source of news that presents both right and left wing opinion and also tends to be willing to present news that can be favorable and unfavorable to both the left and right wing. On the other hand, it is very a common pattern for the 'CBS Evening News according to Dan Rather' and other leftist emphasizing to news/opinion shows 'forget' to present info that is favorable to the right wing, and in SOME cases even present opinion as if it is news!!!

331. Off topic post regarding antenna feedline

Newsgroup: rec.radio.shortwave
Date: 2004-09-09 01:18:57 UTC
From: sdaniel13@nyc.rr.com
Message-ID: <b55fd5d5.0409081718.539e2cc7@posting.google.com>
Source record: 282

This is off topic, but I'm going to ask it anyway...

I'm don't have a lot of technical expertise and I'm wondering how one determines what kind of coax to use as a feedline. I currently have about 50 feet of fairly thin (RG174) coax that I'm using to feed an outdoor active antenna that's mounted on the fire escape outside my window. I'm thinking about mounting the antenna on the roof of my apartment building and suspect 50 ft of feed line might just be enough to allow me to do that. However, a friend of mine told me that 50 ft of RG174 is going to allow too much signal loss. So, there you have my first question: Is 50 ft of RG174 coax a bad feedline?

The second question is this. My friend seemed to think that the 50 ft run to my roof would result in greater signal loss than the much shorter run to my fire escape, even though we're talking about 50 ft of coax either way. This didn't make sense to me. 50 ft of coax is 50 ft of coax, it seems to me, whether it's coiled and leading just outside my window or straight and leading all the way up to the roof. Am I wrong about this?

I am most offended by those who impart a holier than thou attitude
in a hard-news newsreader format, yet are still more biased than
they should be. I agree that there is always some kind of bias,
but too many of those who are especially biased and 'impure' tend
to present themselves as some kind of 'pure' lofty elite. The
'sad' thing is that the 'gritty' Fox hard news shows (e.g. Fox Report)
seem perhaps even more even handed than the so-called elite Dan
Rather or Peter Jennings obvious Democrat/leftist operatives.

When people complain about 'Fox', they seem to try to confuse/confound the
O'Reilly or Hannity/Colmes shows as 'hard news' and forget that the true
news shows on Fox (e.g. Cavuto or Fox Report) tend to be much more even
handed than the so-called hard news represented by "world according to
'whats the frequency' proven democrat supporter Dan Rather" or
"world according to 'leftist Canadian' Peter Jennings." Frankly, Peter
did finally choose to become an American citizen, but considering the
benefits that he has gained from the US, he should certainly be a little
more pro-American than his VERY CLEAR pro-Palestinian (over and above the
US) bias.

John

334. IC-746 Pro and HAM licence

Newsgroup: rec.radio.shortwave
Date: 2004-09-09 01:35:40 UTC
From: Michael <md1966@optonline.net>

Source record: 284

Hiya.....

For about a year, I have been considering buying a new tabletop sw rig. I currently use the R-75, and I was thinking of getting a DSP radio. After reading some receiver comparison reviews of radios like the NRD-545 and getting other advice from people on this ng, I became more and more interested in the IC-746Pro. It seems to be an amazing DSP DX'ing rig. I also know about the reported problems with the transmitter, but I'm not so worried about that. It can be fixed.

Up until now, I have not been interested in transmitting as an amateur. Just sw listening. I figure, if I am going to get an IC-746Pro, I might as well look into getting a ham license. It might be fun....

I read a few links about the multiple choice tests for the tech license and I also saw a list of pool. My question is... How much of an ordeal is it to get set up to take the test itself ???

Michael

Hi Steve, lol at the [OT] comment, I suppose that's true sometimes..

Since we are a shortwave group, at those frequencies 50' of anything will be fine with little if any noticeable difference between feedline choices. Shortwave listening requires the best signal to noise ratio, with little effect from minor attenuation of cable loss. Scanner listening, especially above 225mhz, requires maximum signal possible, with little if any concern for SNR. Height of the antenna is important to both shortwave and scanner frequency listening, so your friend is wrong about the loss v. height issue. The principle of diminishing returns applies to heights over 100' unless you can afford heavy hardline for scanner frequencies.

Jack

> get set up to take the test itself ???

The Tech license study will take the average person about 2-4 weeks to get through, depending on how much time you have. It is not a difficult test, even if one isn't really technically inclined. The Tech study manual covers mostly basic material, and you won't need more than middle-school math abilities to do the calculations required in the exam.

However, you won't be able to transmit on the SW bands until you upgrade to the General class. That's another whole study guide and test. The General Class study guide covers much of the same stuff the Technician guide does, but in more depth, and there is more about RF exposure and antennas. You also need to pass a 5 words per minute Morse Code receiving exam for the General license. Many people expect the Morse Code exam to be dropped in the near future, but I wouldn't hold my breath waiting for the FCC to approve its demise. Some people have taken both the Technician and General licenses at once. Each of these tests consists of 35 questions, and the test is multiple choice. And the 5 wpm Morse Code test is really pretty easy to pass too.

There are good practice exams at the following websites: www.eham.net and www.qrz.com.

The best study guides (IMHO) are the ARRL manuals. The Tech study guide is the Now You're Talking! 5th edition, which contains lessons and the current test question and answer pools. The General Class Manual is also available from ARRL, as are Morse Code practice CDs and tapes. Their website is here: www.arrl.org/catalog.

Good luck!

Jackie

You lost me with the first few. I noticed that they were strictly anti-Israeli. Not that I'm pro-Israel, because I'm not. But you never hear of Jews strapping bombs to their chests and then climbing onto buses carrying children to school as the Palestinians have. But then I saw that one of your links was critical of both Palestinians and Israelis, and I thought "Okay...I misjudged the list, perhaps." The way I see it, if both sides are screwing up, then be critical of both sides.

But then I skipped to this bottom link, and I now see that I have to face the facts as they are.

> http://www.hoffman-info.com/images/bush_sharon_yassin_1.jpg

Do you know who Mike Hoffman even is? And do you even have a clue as to what that photograph is referencing? I imagine you do, but it's just so damning to your position that I have a hard time believing that you'd be willing to link to it. Since I'm sure not everyone here got it, I'll clear it up. It's referring to wheelchair-bound Islamic cleric Ahmed Ismail Yassin, who founded Hamas...which is an -Islamist terrorist organization-. If ever someone needed to suck on a rocket from a Israeli gunship, it was him; and that's exactly what he did earlier this year. He -needed- to die. (He'd been in the chair since he was a kid, IIRC, so forget playing the poor crippled old man card, Mike.) I'd have been delighted to have capped this bastard myself. The world is a better place now that he's dead. But you seem to decry his killing by posting a link to that picture, which is really just an attempt by an anti-semitic holocaust denier to make the Israelis look bad. The photo had -nothing- to do with killing kids. Oh, except for the fact that Yassin, as the leader of Hamas, was responsible for -killing kids-. If you had a point, it's overshadowed by your link to that picture, as if the joke was in bad taste, or his killing was an evil act.

Just how did you find that picture, Mike? Do you spend a lot of time at sites like that?

Over the last couple of days, I've kept getting this sense that you weren't feeling as harshly towards the Chechnyan terrorists as I thought any civilized human being ought to. Now I'm -really- starting to wonder.

I'd like you to meet my new friend, Leroy. You guys'll get along famously. Or rather, infamously.

There is some evidence that the Russians did a spin on the 'war on terror' as a way around the whole ethnic cleansing thing, hold down the minorities question: 'these aren't minorities trying to gain rights and self rule, but terrorists that must be liquidated'. Applies at least to Chechnya, South Ocettia, Abkhazia, Nagorno-Karabakh. I don't hear about any of this on SW anymore. Used to.

A friend who was at the Kumtor mine in Kyrgyzstan (a gold mine, a long way west, a joint US-Kyrgyz-Russian enterprise from what I understand, with lots of Canadian miners) said he could hear non-gov't Russian language broadcasts from Georgia protesting the use of Russian troops in Georgia and Armenia, but nothing in the past couple of years. He also talked of North Koreans being in Kyrgyzstan. He thought the NK's were sending prisoners there to work as a way of paying off North Korea's debts to Russia.

I'd prefer a thicker coax for physical strength, but the loss on 50 feet isn't going to be meaningful, particularly since the signal will be amplified before it hits the coax.

I've got about 350 feet of a Belden variation of RG58 on my primary antenna, and it's fine even when I switch out the remote amp.

Putting your antenna on the roof should help get it away from electrical noise - even if you had to switch to 100 feet of coax, it would probably be a very good thing.

The down side is putting it on the roof also makes it more likely to get damaged by lightning.

Yes, but the extremists are vastly outnumbered by the moderates. The
latter must take a stand against the former if Islamic terrorism is to
be quenched.

Get some R-59U coax (Radio Shack) which is intended for TV satellite dish systems. It has better shielding than most other coax that you can easily buy. The R-59U is 75-ohms instead of 50-ohms but that's not a significant mismatch for receiving. I'm using 100-ft of R-59U with no noticable signal loss. Check out the following website for the antenna system I use.

http://www.anarc.org/naswa/badx/antennas/low-noise_antenna.html

Dead children are dead children. Why is one child killer a terrorist and another not? If you kill babies using an airplane or helicopter are you less guilty of murder than a guy with a handgrenade?

Shooting missiles or dropping bunker busters into an eight storey apartment building because there MAY be a wanted person in the basement is unforgivable. 'Pre emptive' strikes are murder..I don't care how you slice it. The disease is spreading. Now the Americans and Russians are getting in on what used to be a purely Mossad aberation.

It's all about money. In many cases Republicans get elected because they have more campaign money from rich contributors. Bush currently has at least twice as much as Kerry. That's one of the reasons the Republican party is called the party of the rich. Democrats are not known for being rich, which is one of the reasons they're Democrats. They see the Democratic party as representing them better than the Republicans. I watched the RNC for almost a half hour on the first day before I saw a black delegate.

He actually got suspended from flying.

==========

Records Say Bush Balked at Order
National Guard Commander Suspended Him From Flying, Papers Show

By Michael Dobbs and Thomas B. Edsall
Washington Post Staff Writers
Thursday, September 9, 2004; Page A01

President Bush failed to carry out a direct order from his superior in the Texas Air National Guard in May 1972 to undertake a medical examination that was necessary for him to remain a qualified pilot, according to documents made public yesterday.

Documents obtained by the CBS News program "60 Minutes" shed new light on one of the most controversial episodes in Bush's military service, when he abruptly stopped flying and moved from Texas to Alabama to work on a political campaign. The documents include a memo from Bush's squadron commander, Lt. Col. Jerry B. Killian, ordering Bush "to be suspended from flight status for failure to perform" to U.S. Air Force standards and failure to take his annual physical "as ordered."

The problem with gun legislation is they want to ban aspects of the
weapons. Some times its certain combination of things someone thinks
makes the gum more dangerous. It is all a bunch of BS to anyone that is
familiar with guns. The bill Kerry wants to pass forbids any kind of
auto loading shotgun and shotguns with certain other features like a
keyhole or pistol grip.

Kerry didn't take to well to his military training.

Just remember that people who want to ban one kind of gun really want to
ban them all.

Are you for Smarter Bombs or Smarter Kids? Poll...

http://engforum.pravda.ru/showthread.php3?threadid=95911

Let the photos flash before your eyes and ask yourself: "Am I for
smarter bombs or smarter kids?"

http://www.retrovsmetro.org/

Understanding the uncivil war

The Uncivil War affects every American, whether raising kids on an
hourly wage with no health insurance, or dodging bullets on the
streets of Baghdad, or ingesting dirty air and water, or wondering if
our votes will count in the coming election. This conflict is as old
as the 13 Colonies and as new as Swift Boat Veterans for Truth. Until
now, the two sides have never been precisely defined --- or named. We
call them Retro and Metro America. On this website you can learn about
these two Americas and how the escalating war between them affects
each of our lives. You also can order the groundbreaking bestseller:
The Great Divide: Retro vs. Metro America.

***

And you could win an environmentally-friendly, anti-war machine Toyota

Well folks, it looks sadly like Shortwave Kook-Radio has
lost another commensurate broadcasting goofball....

Elizabeth Border's goofy radio show which was at 11:00 PM on
WWRB 5.085 weeknights appears to have been replaced
with another run-of-the-mill redundant southern bible thumper.

How sad!

Border was a true shortwave kook. Right up there with the
nutty guy that used to be on WBCQ who used to say that David
Rockefeller was living on an orbiting spaceship, and Jackie
Petru on WWCR (?) who is a current female mental-patient with
a microphone cable passed under the bars of her padded cage
at the local State Mental Hospital in Attica (>?)
(see www.sweetliberty.org for her ultra-paranoid and VERY AMUSING web site)

As for Elizabeth Border, she was best described in the
July 2004 issue of http://members.localnet.com/~lukebush/X-R%2335b.htm
Radio Blog. This site is an EXCELLENT RESOURCE FOR TRACKING
SHORTWAVE RADIO KOOKS, MASTERFULLY WRITTEN BY
www.xrayer.com at RayXr@aol.com - BE SURE TO BOOKMARK THEIR SITE !!)

We quote from the site above.... :

------------------ begin -------------

>> A Divided Reality <<

Just when I thought I had heard everything that
Christian-patriot shortwave radio has to offer...

Frequency: 5.085 MHz. Station: WWRB.
Day: Wednesday.
Hour: 11 PM Eastern Time.
Program: The Divided Kingdom, hosted by Elizabeth Border.

Border sounds like all the other ultra-right-wingers out
there, rambling on about the New World Order, the
Communist conspiracy, the abortionists -- until she
illustrates her points by mutating her program into a
weird children's show.............

After speaking a while on a certain topic, her program
shifts gears and a radio play is presented, featuring Border
using a high-pitched voice to portray Barbie, a simple
country girl trying to keep up with the plans of the

Great Conspiracy. In one episode she confronted
Fatherland Security, the personification of the
Patriot Act (a character also voiced by Border, using a
deep tone and a strangely inflected rising-and-falling speech pattern).

Barbie is walking along when she hears some terrifying sounds
coming from an open manhole. Fatherland Security suddenly
appears. Barbie asks him to close the manhole cover so she
can't hear those horrifying screams and moans.
After complying with her wishes, Fatherland Security talks a
while with Barbie, both characters serving as mouthpieces
for Elizabeth Border's conspiracy theories. (Author intrusion to the max.)
At one point Fatherland Security reads a news article to Barbie
related to the plans of the Evil Ones.

Barbie knows Fatherland Security is part of the
grand evil plot -- but being a good-natured soul,
she's trying to convert F.S. to the good side.
Except the manhole cover keeps opening up and
those tortured souls below keep interrupting her.....

After getting the manhole to hell closed again, Barbie squeaks
on about how Fatherland Security is dressed differently this time.
Before he wore a black uniform and boots, looking like
Darth Vader; now he wears a suit and tie. F.S. points out that
his neckwear is red, white and blue. Barbie asks him if he's
going to celebrate the Fourth of July, American independence,
or is he going to celebrate Adam Weishaupt who founded
the Order of the Illuminati in 1776? She wonders what side
is he is really on......

Fatherland Security laughs, keeps Barbie guessing as he
returns to his cavernous manhole of damnation, the agonizing
screams heard one more time. Barbie tells him to repent, repent...

I could tell you more, but after recalling all of this stuff, I have
to drop some MKULTRA acid and see what condition my condition is in."

---------- end --------------

I couldn't have put it any better myself!

Bye-Bye Lizzie B. We're gonna mis ja! ;)

We need more "off topic" posts like this.... :-)

>
> I'm don't have a lot of technical expertise and I'm wondering how one
> determines what kind of coax to use as a feedline.

You are going to get a lot of bull on this subject, largely built on
mythology.

Below 30 MHz, i.e. shortwave, and with only a 50 foot cable length,
cable loss simply isn't an issue.

What *is* important, however, is that your cable be capable of
surviving conditions outside. So, the cable should be UV resistant,
"non-contaminating," meaning that water won't get in and destroy the
dielectric between the shield and the center conductor. Finally, it
should be "direct burial" if you plan to, well, bury it.

> I currently have
> about 50 feet of fairly thin (RG174) coax that I'm using to feed an

> of RG174 is going to allow too much signal loss. So, there you have my
> first question: Is 50 ft of RG174 coax a bad feedline?

Yes, but not because of the loss. At 30 MHz, the highest frequency
you'll be using, it has a loss of less than 3dB. However, it it not
UV resistent or non-contaminating, so it'll get waterlogged and break
down relatively quickly.

Almost any coax would be better, given those characteristics. My
personal favorite is RG-8X, because it is extremely flexible. RG-58
has higher losses (who cares?) and is less flexible, but the
most-easily obtained RG-58 is radio shack cable, which, not to put too
fine a point on it, is junk.

You can obtain RG-8X from cable-X-perts (www.cablexperts.com) among
other sources.

>
> The second question is this. My friend seemed to think that the 50 ft

> ft of coax, it seems to me, whether it's coiled and leading just
> outside my window or straight and leading all the way up to the roof.
> Am I wrong about this?

No, you are exactly correct. Furthermore, the distance is so short.

Now if you want to get into scanners, that's a whole different ball
game. Much better cable is necessary, and losses are important.

Likewise, if you start getting into transmitting, or start running
very long cable runs, you need better cable.

A final thought: Just to give you an idea on how absurd the RG-174
argument is, I have several GPS antennas, all of which are fed with
RG-174. One of them has a 25 foot feed. GPS uses 1.5 GHz. At 1.5
GHz, RG-174 is wet string. Yet, somehow, it does the job just fine,
despite losing over 99% of the signal over a short run. (Preamps help
overcome this problem in most external GPS antennas.)

Good luck with your new antenna mounting!

Regards,

>

> first question: Is 50 ft of RG174 coax a bad feedline?

It depends on the frequency you will use it on and how much signal you
are willing to lose.

RG174
MHz dB loss for 50 foot
50 -2.9
100 -4.2
200 -6.25
400 -9.5
1000 -17

3 dB is half your power so you will lose half your signal around 50 MHz
and it gets worse the higher in frequency you go.

If you are using this cable for HF then you can plot these points in
Excel. The line should be fairly linear and the loss will not be as bad.

> The second question is this. My friend seemed to think that the 50 ft

> outside my window or straight and leading all the way up to the roof.
> Am I wrong about this?

The loss is over the length of the cable, it does not matter where it is
routed. If the fire escape is closer and you cut the coax for that
shortened distance then you will experience less loss.

No. But that doesn't explain why you're giving so many URL's to anti-semitic sites. Be fair and balanced. If the Israeli's are, in your view, murderers, feel free to say so; just don't be surprised when someone else is able to match each of your anti-Israeli sites with five or ten anti-Palestinian sites. There's a big difference between incidental and collateral deaths and -deliberately- blowing up buses with children on them, even if it's only plausible deniability. (Which I don't believe it always is.) . I'm distressed that you can't see the difference. And quit snipping the parts of my posts that make you uncomfortable. Personally, I thought that joke photo was pretty damned funny. The guy was a TERRORIST.

Pre-emptive strikes? I haven't seen any of those going on. Are you referring to the current war in Iraq? That's merely a continuation of the first war. The one that Iraq lost. The one that we quit prosecuting on the basis of their promise to do certain things. Things that they didn't do. Remember? Surely by saying pre-emptive you're not referring to the recent killings of Hamas leaders? There's nothing pre-emptive about those, either. They already have blood on their hands. The blood of children.

By pre-emptive, do you mean us invading a country because they -may- someday harbor terrorists, or give them aid and comfort? Relax...I don't believe that Iceland has anything to fear from us. -That- would be pre-emptive.

Invading Iraq certainly wasn't, regardless of the spin that anyone wants to put on it.

Oh, and speaking of Hamas...quit snipping the parts of my posts that make you uncomfortable. Someone might mistake you for an anti-semite.

You can't get any more grass-rooted than Vietnam veterans that served
with Kerry. You have to understand that they have a 30 year old bone to
pick with him.

How could anyone vote for that Kerry traitor.

376. Christian shortwave station launched in Congo

Newsgroup: rec.radio.shortwave
Date: 2004-09-09 05:33:39 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <chopvj$4jh$1@titan.btinternet.com>
Source record: 376

Missionary organizations have set up an evangelical shortwave station in the Democratic Republic of Congo. Radio Tangazeni Kristo (RTK) operates from the town of Aru, just across the border from Arua in Uganda. Finnish DXer Jari Savolainen found out that RTK is broadcasting on 4845 kHz in the 60-meter shortwave band with very low power. RTK is jointly operated by Communaut&#65533; Evang&#65533;lique au Centre de l'Afrique (CECA-20) and Die Gute Nachricht f&#65533;r Afrika (DIGUNA). CECA-20 is nationwide church originally established by the UK-based Africa Inland Mission International (AIM), while DIGUNA is a German missionary organization. There is also an RTK FM station in Bunia. The programs are mainly in local languages with some content in Swahili, French and English. According to Savolainen the transmissions run daily at 0330-0515 UTC in the mornings, and at 1400-1930 UTC in the evenings from Monday to Friday. During the weekends the scheduled broadcast time is 1155-1930 UTC. Savolainen has a source who says that in the beginning of September transmitter power will be raised to 300-500 watts.

Source record: 382

Well, in 1952 (this may be out of date) the Tech and General exams
were the same except Tech didn't have any code or privileges, and
there was a nifty Novice test with 5wpm code nonrenewable that
lasted a year, for you to get your code speed up to the General's
13wpm. If you didn't go on the air over that time in code, you
had a tough time meeting the code requirement. If you did, it
was easy. Anyway judging from the experience of a typical child
and his father following these two paths.

Then it all started going downhill and God only knows what it is
today. I don't even know what the power limits or bands are.
We used to have a nifty KW into a backyard antenna, after years
of sultry upgrades, and sending code would dim the lights and
shrink TV pictures.

You could pass any written test by memorizing the ARRL's License
Manual but code was apparently the killer for grownups.

Did you really listen to Radio Prague via a discone antenna?

Mark.

385. Christian shortwave station launched in Jaala

Newsgroup: rec.radio.shortwave
Date: 2004-09-09 10:10:17 UTC
From: Jari Savolainen <juoppojari@satx.rr.com>
Message-ID: <d_V%c.5118$ug2.476@fe2.texas.rr.com>
Source record: 385

Missionary positions have set up an evangelical shortwave station in the

Democratic Republic of Finland. Radio Vitun Viikset (RVV) operates from the

town of Jaala, just 7000 miles from Ulaan Baator, Mongolia. Finnish DXer Jari

Savolainen found out after a summer of heavy drinking that RVV is broadcasting

on 24845.5 kHz in the alco-meter shortwave band with ONE BILLION WATTS of

power. RVV is jointly operated by Herttareetin Huorissak&#65533;yv&#65533;t Ukkomiehet (PANO-69)

and Die Gute Nachricht f&#65533;r Elise und Eva Braun (VITTU-5). PANO-69 is nationwide

church originally established by the Freebasing African Jungle Jumpers International

(HOTTENTOTTI), while VITTU-5 is a liberal Amish missionary position organization.

There is also an RFCK FM station in Iitti. The programs are mainly in local languages

with some content in Savo, Suomi, Swahili, French, Russian, Mexican, Ebonics

and English. According to Savolainen he is running out of things to drink (donations

appreciated) but the transmissions run daily at 0330-0331 UTC in the mornings, and

at 1400-1359 UTC in the evenings from Monday until the Finnish state liqueur

monopoly (ALKO) opens. During the weekends the scheduled broadcast time is

1931-1930 UTC or when the station personnel falls asleep. Savolainen has a source

for cheap Estonian vodka who says that in the beginning of September transmitter

power will be raised to 300-500 BILLION watts.

It's no big deal, go to the ARRL site and they have a section where you can locate local ham clubs. Make a few calls and you'll find a club that tests, usually at hamfests or ham radio classes. You can do it, get the book "Now your talking", study it for a month or so and go for it.

I am getting what I believe to be CODAR on two areas of the dial, centered on these freqs.: 4546 and 4800 kHz. As I am located on Long Island, NY I expect that these are originating from stations on the New Jersey shore.

And Bush may not only have lied about WMDs. Actually he may have lied
about EVERYTHING...

Bush's record and the deaths in Iraq
September 9, 2004

THE US government spent $1 million for George Bush's flight training,
and he apparently didn't fulfill his duty to the Texas Air National
Guard ("Bush fell short on duty at Guard," Page A1, Sept. 8). Had the
disciplinary code been followed, Bush would have served in Vietnam,
facing the risks of combat. But as the son of a congressman, he
instead earned a big wink and there were no consequences for his
dereliction of duty.

What does the man who was given a pass think about the 1,000 men and
women who have died in Iraq and the many more who have been wounded?
What does he think about those National Guardsmen who were called up
and even had their tours of duty extended?

Revelations about Bush's failure to fulfill his duty to the Guard, his
country, and to us are shocking. They make it harder to justify our
wanton sacrifice of the young and powerless in a military adventure
that in the beginning was avoidable and now appears unwinnable.

396. Hurricane Ivan

Newsgroup: rec.radio.shortwave
Date: 2004-09-09 13:07:01 UTC
From: dxAce <dxace@iservd.net>
Message-ID: <41405575.69001E90@iservd.net>
Source record: 396

Hurricane Ivan Special Update:
6:14 a.m. EDT - 06:14 UTC
An Air Force Reserve Reconnaissance Aircraft investigating Ivan this
morning recently reported a flight-level wind of 154 kts in the
northeast quadrant. They also reported a lower central pressure of
920 mb suggesting that Ivan may contain surface winds a little stronger than the
160 mph indicated in the 5:00 a.m. AST advisory.
Dropsonde wind reports also indicated winds of near 210 mph at an
altitude of about 350 feet above the ocean surface.
(http://www.hwn.org/)

Ouch! 210 MPH.

"Ordeal?"
The ham license is now far less challenging than putting money in a parking meter. You've got the code crybabies and corporate charlatans to thank for that.

How insensitive you are for a liberal. Russians in general are fine
people. Perhaps you mean Communist lovers instead of Russian lovers.
Usually you can tell them by their liberal fantasies.

The key to getting a Ham license is determination as is any license.
If you see it as an ordeal -- you'll probably flake out.
If you see it as another of life's challenges -- you will pass as has
675,000 others from ages 9 to 90

For an overview -- See URL:
http://www.arrl.org/hamradio.html

Practice tests and tutorials at URL's:
http://www.aa9pw.com/

The Democrats, on the other hand, only have rich people in positions of power; their followers are largely poor due to enslavement by entitlement programs.

My heart goes out to poor, impecunious Democrats like George Soros and Ted Kennedy.

Not the ARRL manual; it was that guy whose name I can't remember, who
published guides made up by paying testees to remember questions and
multiple-guess answers just after leaving the testing sessions.

Well, with friends like these - you know.

Both are execrable as trustworthy nations go. We're in bed with the
villains, in Saudi Arabia's case purely because of oil. Without our
bucks, they'd terrorize us in a heartbeat, and you know that they
already support it.

There's Jack Blood, a Jones clone, who comes on for a couple of hours after AJ.

Steve Quayle can be interesting, especially if you're interested in how the giants mentioned in Genesis connect to -- well, just about everything. As far as I know, Steve Quayle is the only SW broadcaster who has had his name trademarked (Stephen Quayle (TM))

There's also Jeffery Bennett's daily rant, Perspective on America. Mostly the message is -- America sure got screwed up over the last few years. Buy Gold.

If your friend doesn't mind evangelism mixed with the politics, Texe Marrs' Power of Prophesy show is worth a listen. Texe specializes in such subjects as how the Jews and the Freemasons fit into the New World Order. That is common enough, but Texe distinguishes himself from the lesser conspiritorialists by always keeping a cheerful, optimistic outlook. He's the Happy Warrior in the world of Special Knowledge.

These shows can be found on this schedule:

http://www.wwcr.com/wwcr_links/wwcr_programming_links.html

Some of those other shows look pretty good, as well. I haven't heard them all.

Generally, any show about prophesy can be interesting, especially if the Prophet claims to speak directly to God. Of course, this is Brother Stair, AKA The Last Day Prophet of God. His broadcasts are particularly interesting because I'm not aware of one instance in which Brother Stair has made a correct prediction, let alone a prophesy.

James Lloyd makes his prophesies by studying the Bible and applying his studies to the modern world. His greatest recent prophesy was the massive terrorist attack on the United States on July 4, 2003. Another prophesy concerned another attack on July 4, 2004. James Lloyd also likes to ramble on about the "rapture cult" and how they are headed straight to Hell.

http://www.christianmedianetwork.com/bschedule.htm

Here's a webpage with some listings from another monitor of Special Knowledge radio:

http://www.raven1.net/shortwav.htm

So, this is my reward for being mostly on-topic for the last few months. I get plonked by some useless RRS non-contributor. At one time, I was proud to have been plonked by the best. I was found in the best killfiles everywhere.

Oh, the ignominy.

Frank Dresser

I have my Plastic Jesus in a hula-skirt on my dashboard
that pees on the person in the passenger seat when they
try to pull her skirt down.

As for the cunt's website above, she looks like 2-B just another
Jew-hating piece of white poebucker trailer trash on domestic short-wave.
Page around her site and you'll find links to garbage like the
Protocols of The Elders of Zion and other notorious forgeries
that gave rise to Nazi Germany and similar Fascists Govt.'s

I'll bet she and sever others of her ilk on Shortwave Hate Radio are
all in deep mourning today, as this morning the "elder statesman of
hate", Richard Butler, The Leader and Founder of Aryan
Nations Church of Jesus Christ Christian (sic), was found dead
in his bed, shit-the-sheets and all.....

(How Nice! Let's hope they can find a toilet big enough
to flush his pathetic carcass down thru or just dump him
into the human waste digester machine tank at the local
sewage and wastewater treatment plant in Idaho or wherever
he was found...or jus dump him into the desert and let the
vultures pick him clean for dinner - YUM YUM !!!)

Subjecting a handicapped/disabled person to the
type of conspiratorial garbage that Joyce & Dave, RG Stair
and Alex Jones offloads into the Ionosphere on a daily
basis may be construed as form of abusive and unusual
punishment, but then again when you think about it, most of
(their) *pay-triot listeners* are all abject retards anyway
so I guess that doing this just might not be a bad idea after all !

My blessings to you my son ---> "PFHBBBBLTTT !!!"

Now, go forward, and do the work of the lord and
be sure to 'make those checks out to Annie'.....

Grammitical Note of The Day: For those of you who didn't take College
English Writing
Courses like I did at UMD College Park and The UofW at Madison, whenever
you
want to convey the act of passing a *VERY LOUD Broccoli Fart* in writing as
in mixed company like at a party setting, or in those hardwood church
'phews'
at 2nd Baptist during an altar-call, you can do this by typing the
word: " PFHBBBBLTTT !!! "

See! you learned something new today. Now go and make a sign
with " PFHBBBBLTTT !!! " on it in big black marker and tape it
to the CEO's or the Mail Room Sorter's office. Great for laughs.

No carbon dioxide, no plants, little oxygen.

No feces, little agriculture. Well, some places anyway. :-)

OTOH, no feces, very few politicians.

by George i think hes got it!

consider: CO2 is necessary for tree/plant life. human/animal waste products enrich the soil, which aids plant growth. which provides healthy food, which gives us humans more time to build and operate radio stations for the enjoyment of the multitudes. the more people the more the cume and TSL therefore the more cash flow and life is wonderful.

searching back trying to find who added all these freaking cross posts... this thread just started out in alt.radio,alt.radio.broadcasting

And thats a bad thing? Dont you realize the US has less than 100 years
left of existence if mortality rates continue to decline, and live
much longer while still reaching senility approximately the same age?
Larger numbers of people need to realize thier duty is to die if they
continue to exponentially reproduce or the clean water wont be there,
the food wont be there, and the government will literall go bankrupt
trying to provide care for them (us) all.

>
>> And as far as trusting the government reports on NIEMR, would this be

>Forget it, I don't even want to know.
>
Geez, lighten up. You have problems about dying. Get over it. It will
get you. Do what you want while you are here. Have some fun. You may
die. Oops, I mean, you WILL be dying! And the cool thing about it is
you wont know it happened, you wont care and you wont feel it (being
dead).

So since all OTA stations are buggy whips trying another foolish polish (HD Radio).... they wont be around too much longer anyhow.

Interesting, Stephan. I wonder where to get more technical information
on this.

436. US Political cons or lib on SW?

Newsgroup: rec.radio.shortwave
Date: 2004-09-09 21:30:36 UTC
From: markwgpsu@aol.com
Message-ID: <20040909173036.07480.00000485@mb-m18.aol.com>
Source record: 430

Where can I tune to hear US political talk on the shortwave dial. I live in the northeast/mid-atlantic region.

I don't care if it is liberal or conservative.

I prefer not to listen to reruns or religious programming.

Thanks.

Mark

Do believe during that era Some clerk-typist sat down at a typewriter with "N"
carbon copies and typed out the document.
Since you were using a Typewriter Ribbon, letters got filled with Ink.
The letter "e", being a commonly used letter, used to get clogged up quite
often, meaning you had to eventually clean the letters on the typewriter with a
"Q" tip and Alcohol.
If you didn't clean the keys, the ink would build up, eventually giving you a
smudgy looking letter.

Try this blog for updated information.

<http://www.powerlineblog.com/archives/007760.php>

The documents aren't just proportional, one has a superscript, and they
are kerned. What are the odds the military used a high end typesetting
machine to produce garden variety memos in the early 70's?

A link from that page leads to a guy who retyped one of the memos in
Microsoft Word, and superimposed the printout with the CBS document and
found everything matched exactly.

<http://littlegreenfootballs.com/weblog/?entry=12526_Bush_Guard_Documents-_Forged>

A logical next step would be to find other documents from the same
officer from the same time period and see what they look like.
Naturally, these shouldn't come from the same source that provided the
suspect ones.

But as it stands, it looks like they were forged.

"Gandalf Grey" <gandalfgrey@infectedmail.com> wrote in message news:4140ba3d$0$25214$9a6e19ea@news.newshosting.com...

Here's where this all started.

http://www.powerlineblog.com/archives/007760.php

And here's the son of the guy that wrote the memos saying he thinks something's not right about them.

http://abcnews.go.com/wire/Politics/ap20040909_1710.html

Son of Late Officer Questions Bush Memos
Son of Late Officer Questions Memos Attributed to His Father in File on President Bush's Service

The Associated Press

DALLAS Sept. 9, 2004 - The authenticity of newly unearthed memos stating that George W. Bush failed to meet standards of the Texas Air National Guard during the Vietnam War was questioned Thursday by the son of the late officer who reportedly wrote the memos.
"I am upset because I think it is a mixture of truth and fiction here," said Gary Killian, son of Lt. Col. Jerry Killian, who died in 1984.

Gary Killian, who served in the Guard with his father and retired as a captain in 1991, said one of the memos, signed by his father, appeared legitimate. But he doubted his father would have written another, unsigned memo which said there was pressure to "sugar coat" Bush's performance review.

"It just wouldn't happen," he said. "The only thing that can happen when you keep secret files like that are bad things. ... No officer in his right mind would write a memo like that."

News reports have said the memos, first obtained by CBS's "60 Minutes II," were found in Jerry Killian's personal records. Gary Killian said his father wasn't in the habit of bringing his work home with him, and that the documents didn't come from the family.

CBS stood by its reporting. "As a standard practice at CBS, each of the documents broadcast on "60 Minutes" was thoroughly investigated by independent experts and we are convinced of their authenticity," CBS News said in a statement.

The White House distributed the four memos from 1972 and 1973 after obtaining them from CBS News. The White House did not question their accuracy.

Wow, more unsubstantiated smears. I would've thought you'd run out by
now...or at least gone back to more posts with poll results in them.
Oh, wait...guess that's a negative on the polls.

Hmmmmmm... are Kerry's Swift Boat pals being compensated? Have their stories been dissected? Have they been prepped for appearances or filmings?

Something to think about.

I'm going to pick up a copy of "Now Your Talking" and also see about contacting a local ham club for the test. I'm going to prep for the Tech and General because I really want to have acess to the sw/long range bands too. I already know partial Morse code. I learned using a program called NuMorse a few years ago. It took me about three weeks to be able to decode by ear. The only problem is, I just learned the letters and not numbers or punctuation. I didnt bother when them. I figured that the letters would be good enough :-) Now, I'll have to go back to NuMorse and do all the numbers and then, mix them in with the alphabet in quizz mode. I also never used a key before. I just learned enough to listen to the ham bands and decode by ear and not transmit. I can decode faster then 5 wpm, so I'm sure I can pass the morse test after I mix in the numbers. I just need to learn numbers now too. Shouldn't take me too long. I also had a look at some pool questions. I was able to answer a lot of them already. Still... I need to study up to pass... I was most worried about having to spend time with clubs or groups... I dont have the time for that. After I prep, I just want to show up, take the test and get out... :-)

Thanx again for the help !!!

Michael

You can also add:

John Stadtmiller with the National Intel Report weeknights on: 12160 @ 5:00 EST & second hour of the show 9475 @ 6:00 UTC. Lots of "New World Order" Conspiracy Stuff....

Rick Wiles with TruNews weeknights on 7315 @ 9:30 EST. He is a lot like Steve Quayle. Gives all the doom and gloom news stories and tells you to prepair for the end times.

Both go great with popcorn or some other snacks... :-)

Michael

He said he was quite disappointed with the lack of phone in contributors last night. They needed volunteers for ushering or something too. He's from Texas I think.

His voice reminds me of the Grandfatherly types in bulky sweaters (most likely ex military) brought out by the administration of the day to tell people in TV land why what it is they are doing overseas is legal AND necessary AND SO Mom and Apple Pie-ish...

It's starting to look like you're another off-topic neocon wanker that needs to
be added to the killfile list.

If he WAS lying about his radios, you'd think he would pick out some
more expensive sets. The list he provides is a good well rounded out
collection, with no --unobtainable-for-the-unwashed-masses-- models.

It's entirely believable.

How does that explain the White House releasing the same documents after 60 Minutes aired them? Did the White House fake another set of papers to make dubbya look bad?

Greg (I heard it on the radio)

BTW - Drudge is often right. He has very good sources. He is also often wrong. And he's a salacious gossip monger. Visiting his web site can turn your brains to mush.

I don't know, Gandalf. I'm certainly no Bush fan, and I would love
for these documents to be authentic and I would love to see them (or
anything else) bring W down and out of office.

But I place a high value on the Truth. And the fact here is: the
people who are questioning these documents are making some damned good
points. The font is a proportional one, the "th" is smaller and
superscripted, the letters seem to be kerned, etc. etc. etc. There
seem to be a number of problems witrh these documents - they really
don't smell right.

I think they need to be thoroughly investigated - by REAL
investigators, like the FBI - not by CBS. And then let the chips fall
where they may.

I would LOVE to see Bush tossed out of office, but it MUST be for the
right reasons and in the proper way. It MUST be based on the truth.

And look at it this way - if you admantly insist that these documents
are authentic, and then it turns out that they are not, it will only
make you look foolish. There are plenty of valid reasons to be
opposed to George Bush, we don't need to be making any up.

Go buy the book. It is all documented. They even provide time lines of
events. The book even has FBI reports on Kerry's antiwar activities.
Remember that the real problem the people have that served with Kerry
was what he did upon his return from Vietnam and most of that is on tape.

Any liberal should know better...

I think we should all start calling liberals "old-fart-liberals."

Any old-fart-liberal should know better than to call all Russians
communists.

I heard a net last night from Jamaica on 14.283, between 1:00 and 2:00 Z.
Some Jamaica men eating fried fish and Johnny cakes, talking about how
Grenada was taking a whooping. Don't hear them tonight tho. Hope they make
it through Ivan okay. They also spoke of a morning net on 7.195 starting at
5:30 or 6:00 a.m., their local time I think.

The more I read about the docs (and the more I look at them myself)
the more they stink. It seems to me that somebody might have been
getting a little over-zealous in trying to discredit Bush. Maybe
within the Kerry campaign. If so, then that person (or persons) needs
to be tracked down and prosecuted. Or maybe an independent left-wing
wacko who thought he was doing a Good Thing. Or could be even someone
on Bush's side (or an independent thinking they're doing something for
Bush) who made forgeries that would be found out and would thereby
discredit the Kerry campaign.

I don't know what the answer is right now, but whatever it is, it
needs to be discovered and made VERY public, and prosecutions need to
happen, no matter who the culprits turn out to be. This sort of dirty
trick has NO PLACE in a democracy.

Of course - this assumes that the docs ARE forgeries, and we don't
know that for sure yet. There is a possibility that they are genuine
- but they sure do smell bad.

We need to know the TRUTH about this.

And if they do turn out to be forgeries, I would think that Dan
Rather's career is about over.

"Institute on the Constitution (IOTC) is an educational effort on the part of the Law Office of Peroutka and Peroutka of Pasadena, Maryland. Our educational program is intended to reconnect Americans to the history of the American Republic and to their heritage of freedom under law."

http://www.iotconline.com/

IOTC offers a 12-week course on the Biblical Foundations of the Constitution. There are IOTC classes being held in several locations throughout Maryland as well as in other states. IOTC has been around for a few years, and classes have taken place throughtout most states in

the country! If you decide to take the course at the IOTC in Maryland, they are asking $25 to cover the cost of the material. Otherwise, there is no other cost. For other locations, please contact the IOTC to find out what, if any, cost will be required. You can take the course as many times as you like and not have to pay another dime. Attend as many of the class sessions as you like.

Click on the link below to find out if a class is starting in your area.

If there isn't, there is also material availabe for hosting a class.

http://www.instituteontheconstitution.com/index.php?id=42

For more information on hosting a class, call us Toll Free at 866-730-9796.

> Rather's career is about over.

Just as well. He just doesn't have the 'stature' of a Britt Hume :)

I just read another comment in another thread that suggested that one of the
letters in Kerry's military file might be a forgery.

Now that suggests that all of Kerry's documents need to be examined and all
of Bush's documents need to be examined.

And all by independent experts.

Now isn't that interesting?

It would be ironic indeed if this election comes down to a really bad reality TV version of CSI Miami rather than an honest debate about where this country has gone in the last four years and where it ought to be going in the future.

I've been reading Bryant for years and he lies at the drop of a hat. I
will not believe anything he posts without something that backs it up.

After reading him for years I realized he has been faking it. Just
because something he posts seems "believable" does not make it so.
Bryant has no credibility.

How long's it going to take you to realize that the haters in this NG have to be ignored? The danger of not doing so is to succumb to their doctrine of hatred. I don't hate the haters, I pity them.

Block them and return the NG back to shortwave.

Have fun, ignore the hate.

Do you know any of the Kings debate team? Do you know Prof. Berry?

It's pretty unlikely that 60 Minutes "ran" with the story without a fairly strenuous attempt to validate the documents. They might have been wrong and it might turn out that the docs are plants, but 60 Minutes is regularly challenged by all quarters and I've got a feeling that they go out of their way to vet anything they present as "evidence."

Yeah, on mainframes and midranges, and programs like Displaywrite 360 or
Displaywrite 36 were very crude and couldn't do superscripts or
proportional fonts. They used EBCIDIC coding, not ASCII, and
sophisticated fonts and functions were never written into them.

He is wrong, the IBM Selectric did not have proportional fonts on them.
I worked for IBM for 27 years, the System 360 mainframes used the
selectric units as the console output device. I worked on them.
The Selectric came out in the early 1960s.

Check the documents for yourself. They smell. Bad. And the bloggers
make some damned good arguments.

I'm no Bush fan, by any means. I'd LOVE to see him retired.
Rejected. Dumped. But the Truth is important. And the Truth is,
these documents stink.

The whole thing stinks, and it needs to be fully exposed, no matter
who ends up getting hurt. Dirty tricks have no place in a democracy.

It needs to be FULLY investigated.

Developing? Actually already DEBUNKED!!!

Electric ball typewriters could do that, and the US government
had lots of them.

You guys are desperate and in total denial.

Bush deserted and there is proof of that.

>I get it. The old Rovian "bug in the office" trick.

Of course, the question remains, How could '60 Minutes' fall for
something like that? I saw what I took to be representations of the
memos on the show, but didn't know they were supposed to be the memos
themselves. If what I'm hearing is true; that the documents presented
as the originals had proportional font, 13pt spacing, curly
apostrophes, were in TNR, then yes, they are forgeries. No typewriter
existed in 1973 that could do those things. A print shop could, but
who the hell sends out their memos to get laid out by a print shop?

Wrong, the Selectric was not capable of proportional fonts, and they
were used as the output device for the System 360 console, not for the
system printer. Most System 360 used the 1403 train printer as the
system printer.

The documents, as described, could not have been done on a typewriter
in 1973. But were the docs shown described as being the originals, or

did CBS have someone on a word processor scan them and clean them up?
If the former, 60 Minutes just suffered a terrible blow to its
journalistic integrity. If the latter, they embarrassed themselves by
not identifying what they showed as being representations, but would
survive the embarrassment.

You're right, of course. I would love for the memos to be authentic,
but I won't knowingly embrace falsified evidence.

Kerry was there. Was on the list of speakers, is in the FBI reports.
Nice try.

Huh? I have documents much older than that that are perfectly legible.
There is no reason these 32 year old docs should not be legible.

> They were
> almost certainly reproduced using a Microsoft spread sheet in order to make
> them more legible.

So why attempt to reproduce them exactly if all you want is to get the
wording of the documents. Just explain, the documents have been retyped
word for word for legibility.

On CBSnews.com - they have the docs as PDF's. Get 'em quick, before
they disappear.

But actually, I have a feeling this is going to blow up. At the very
least, this is going to be devastating to CBS and Rather - bigger than
the old "exploding pickup truck" thing from whichever newsmagazine
show that was a few years ago. I suspect that it's going to be a big
story.

I know that we're supposed to have the faith that the FBI will use
their expertise to determine the authenticity of the docs, but remember
who runs the FBI.

BZZZZTTT!!! Wrong! The Selectric could not do proportional spacing. I worked for IBM and worked on the Selectric units that were use as the output device for the System 360 mainframe console. You haven't a clue about which you speak.

XXXXX DRUDGE REPORT XXXXX THU SEPT 09, 2004 22:45:32 ET XXXXX

Marjorie Connell - widow of the late Lt. Col. Jerry Killian, the reported
author of memos suggesting that Bush did not meet the standards for the
Texas Air National Guard - questions whether the documents are real on
tonight's NIGHTLINE, sources tell DRUDGE.

Transcript:

I WAS ANGRY, BECAUSE HERE THEY ARE GOING BACK AND PULLING RECORDS OF A MAN
WHO IS DECEASED TWENTY YEARS, WHO IS NOT HERE TO EXPLAIN WHAT ANY OF THESE
DOCUMENTS SAID OR SUPPOSED TO HAVE SAID, AND I JUST FOUND IT APPALLING. I
WAS SICK THAT HERE WITHOUT WARNING HIS PICTURES ARE UP THERE, HIS NAME IS
BEING BATTLED BACK AND FORTH AND I, LIVID I GUESS IS A BETTER WORD FOR IT."

"I THINK THERE WAS SO MUCH UNTRUTHS BEING SAID THAT THAT FRUSTRATED ME AND
THAT I KNEW THAT IF JERRY WERE ALIVE TODAY THAT HE WOULD JUST, NUMBER ONE HE
WOULD BE TURNING OVER IN HIS GRAVE TO KNOW THAT A DOCUMENT SUCH AS THIS
WOULD BE USED AGAINST A FELLOW GUARDSMAN."

"THAT IS WHAT AGGRAVATED ME SO MUCH, WAS THAT HE CAN NOT BE HERE TO SAY AND
YET THEY CAN DRAG HIS NAME ONTO TELEVISION, MAKING BAD ACCUSATIONS ABOUT OUR
PRESIDENT AND A MAN THAT HE RESPECTED AND I KNOW FOR A FACT THAT HE THOUGHT
THIS YOUNG MAN AS A SECOND LIEUTENANT OR FIRST LIEUTENANT WAS AN EXCELLENT
AVIATOR, AN EXCELLENT PERSON TO BE IN THE GUARD AND WAS VERY HAPPY TO HAVE
HIM BECOME A MEMBER OF THE 111TH F-I-S."

"NUMBER ONE, HE WOULD NOT HAVE TYPED BECAUSE HE DID NOT TYPE. NUMBER TWO,
THE WORDING IN THESE DOCUMENTS IS VERY SUSPECT TO ME. I JUST DON'T BELIEVE
THAT, IT LOOKS LIKE SOME THINGS MAY HAVE BEEN PICKED UP OUT OF A DOCUMENT
AND THEN OTHER THINGS JUST MADE FICTITIOUSLY TO FILL IN THINGS, TO MAKE THEM
FLOW. I JUST CAN'T BELIEVE THAT THIS IS HIS WORDS, MY LATE HUSBAND'S WORDS."

"NOT A TYPIST, DEFINITELY NOT A TYPIST. WE HAD NO COMPUTERS AT HOME BUT HE
WASN'T A TYPIST, AND WHAT IS REMARKABLE TO ME IS THAT HE WAS A PERSON WHO
DID NOT TAKE OR MAKE COPIOUS NOTES. HE CARRIED EVERYTHING IN HIS MIND AND HE

DIDN'T HAVE TIME TO MAKE NOTES."

"I AM STILL PRESENTLY LOOKING FOR OTHER DOCUMENTS. I HAVE FOUND SOME THAT SAY THE 147TH ON THEM AND THEY GO BACK TO 1970. I CAN NOT FIND ANY AT THIS MOMENT THAT HAVE ANY 1972 INDICATIONS ON THEM OTHER THAN A, AND I TOLD HER THAT, A FLIGHT SCHEDULE THAT HE HAD JUST SIGNED HIS NAME TO."

"UNFORTUNATELY WHEN WE MOVED I PUT THINGS IN DIFFERENT LOCATIONS AND I JUST DON'T KNOW WHERE EVERYTHING IS AT THIS MOMENT AND I WAS SEARCHING FOR THEM AND I STILL HAVE NOT FOUND ANY OTHER DOCUMENTS. I DO HAVE ALL OF HIS FLIGHT RECORDS THOUGH AND THEY ARE IN MY HANDS."

"HE DISCUSSED WITH ME HOW PROUD HE WAS TO BE ABLE TO GO AND PIN THE WINGS ON YOUNG GEORGE AND TO MEET THEN MR. BUSH, I'VE FORGOTTEN IF HE WAS WITH THE CIA OR WHAT OFFICE HE HELD AT THAT TIME AND BARBARA BUSH."

"HE LEFT THE 147TH, FLEW TO WHEREVER GEORGE GOT HIS WINGS AND JERRY PINNED THEM ON HIM AND HE WAS, CAME HOME JUST, HE TOLD ME ABOUT THAT AND HOW PROUD HE WAS TO HAVE MET THE FAMILY."

"HE WOULD JUST WRITE LITTLE NOTES ON THE BACK OF ANYTHING. UNFORTUNATELY OR FORTUNATELY AS THE CASE MAY BE, IF HE NEEDED TO JOT SOMETHING DOWN HE WOULD JOT IT ON ANY PAPER THAT HE COULD FIND, ON A CARD, LIKE A CALLING CARD THAT YOU WOULD HAVE, OR JUST LITTLE BITS OF PAPER. HE ALWAYS KNEW WHERE EVERYTHING WAS, AND IF HE NEEDED TO PULL IT OUT OF HIS WALLET ON A LITTLE NOTE OR SOMETHING, BUT HE JUST DIDN'T TAKE MANY NOTES."

CBS faxed the documents to the White House on the day of the broadcast.
The White House released copies of the faxes CBS sent them.

IBM Selectric. The Typewriter I learned to type on in High School.
Actually, they had two we had to learn on: a manual Olympia, and the IBM
that we got to use two days a week. We rotated. The school thought we
should learn on both manuals and electrics. Plus, I don't think the school
could actually afford two classrooms full of Selectrics. On the other hand,
my High School wasn't the Champagne Unit of the Guard.

Got 'em. They look like fourth generation Xeroxes of word processed
documents. They are NOT the product of a 1970s general issue office

typewriter. There wasn't a typewriter on earth that could do
superscript like that, and only very high-end electric typewriters
with the font balls could do TNR or any other proportional font. Not
something you would find in a TANG backwater office. National Guard
in those days was for rich fuckup kids, and nobody at the Pentagon
took it seriously.

As I said otherwhere, I could see CBS processing from the original for
legibility's sake, although it would have been very sloppy of them not
to say they had done so. But in my opinion, these documents were
designed to look like they were the originals, and that means either
someone at CBS went too far for the sake of verisimultude, or CBS just
committed the biggest journalistic factcheck fuckup since the Hughes
Diaries.

How could it possibly have gotten past any reputable document checker?

"It struck me as I was speaking to people in Bangor, Maine,
that this president sees America as we think about a 10-year-old
child," -- Andrew Card, ranking member of the West Wing

This confirms that all our right wing folks who made all kinds of
individualistic and anti-government grunts and honks during the 90s really
just want a government that is a cross between Jehovah and daddy.

========================================
Eckert's Card-Operated Table Printer arrived in February 1945, in time
to produce the 1946 Air Almanac and subsequent issues. Grosch [57]
describes it as "a black proportional spacing electric typewriter, which
IBM had just begun to make in the Forties, in which most of the
alphabetic characters had been replaced by extra numerical fonts: bold
face, or small size, or small-size subscripts and superscripts; all
designed to be harmonious.

==========
Composing typewriters

Derogatorily called "Strike-on" composition, the composing typewriter was used for camera-ready copy in the quick-print business, in academic publishing, and small weeklies, where cost and turn-around were the driving factors. The best were capable of proportional spacing, justification, and handling multiple fonts. The familiar IBM Executive and Selectric can be considered to be in the low-end of this family; the IBM Composing Selectric was a computer-driven, auto-justifying, high-end system.

* Friden Justowriters (2)
* Varitypers (2) with 60 fonts
* Densmore
* Underwood
* L.C.Smith
* NCR
* IBM Composing Selectric (4) (w/o computer or tape units, but w/ multiple type balls)
* other

Yeah. I assumed at first that the people crying "forgery" were just
the usual right-wing liars. But then I saw the documents, right from
CBS' site. And I came to the same conclusion. They are bogus.

The question is: who did it?

>
> In fact, they've been around since the forties.
>

Actually, proportional fonts were available in the 30's - but they
weren't common. But the documents in question aren't just proportional,
they're kerned, and they have superscripts with fractional height
letters. That's not a typewriter or vintage word processor. It's
typeset.

Someone said he keyed in one of the documents in Microsoft Word, printed
it out, scanned it in as a graphic and superimposed it on top of the
same document from CBS, and they lined up exactly. Horizontally and
vertically.

This means the default Microsoft Word kerning and line spacing rules
with the default font are identical to the ones used to prepare the
document. For every letter pair, in every line. That's incredible.

But an easy way to get a very strong indication of the validity of the
documents is to get other memos from the same guy that are known to be
real, from the same time frame, and see what they look like.

My guess is they'll look pretty crude compared to the questioned
documents.

>> fonts and subscripts?
>
>IBM Selectric.

Nope. The Selectric used a ball, and you could replace the ball with
other balls containing other fonts, but no matter what ball was being
used, the platen moved the same amount for each character that was
typed. Push a key, the ball goes *smack* and the platen shifted one
character width. There were 10-pitch and 12-pitch balls available, but
you had to manually flip a switch to change the pitch of the
typewriter itself. There wasn't such a thing as a proportional font
for the Selectric.

And even if they had a proportional-font typewriter, if you look
closely at the documents you'll see that some of the letters are
actually *kerned*. Like the character pair "fi". I'll guarantee you
there weren't any typewriters that did that. And I'd be *extremely*
surprised if the TANG used what was at the time a HUGELY expensive
typesetting machine to produce a routine memo.

You mean one of these:

http://www.columbia.edu/acis/history/tableprinter.html

Yeah. Right. Those TANG memos were probably produced on one of those
things. Typed up on 80-char IBM punch cards first, then fed into the

machine.

Yep. That's the ticket.

I don't know. I don't want to seem like a sheeple here, but I'm looking at the same documents after printing them out. Everything you say is true, but IBM typewriters were capable of doing that kind of printing in 1964 when I learned to type on an IBM ball typewriter. Do you remember those? Avocado green and about as heavy as a Toyota 4 cylinder engine. I went to a poor high school and each of the two typing classrooms had twenty of them.

Additionally, CBS "says" that the documents were authenticated by "independent" experts. That's either an outright lie, or the experts had to have come from a night job at Wendy's. It's a little hard for me to believe that even a rookie document authenticator wouldn't be looking for that kind of thing.

Yes. That's what I learned on. Actually we had to switch every other day
because the typing teacher thought we also needed to know how to use a
manual. The Selectric I used had the capability of multiple fonts [one of
the things you had to learn was how to change the ball] and superscripts.
Actually, you could use all sorts of nifty typefaces and special characters
on various balls.

Those IBMs were heavy suckers, incidentally. Not to mention the cast iron Olympia office models.

Did they say what kind of "experts" authenticated them?

One theory is the signatures were cut from other documents and scanned
in as graphics.

If they brought in a handwriting expert, a photo copy of a scanned
signature would look authentic. A handwriting expert might not even
look at the type.

I don't think he's being dumb. I think you have to have used an old selectric to actually know what those bad boys were capable of. After printing out the pdf images from CBS, I'm struck at how much they remind me of the IBM font style we used in my high school class. Those selectrics were capable of proportional spacing and superscripts. Now that was in 1964.

Maybe it's just my old eyes and a failing memory, but I took your advice and
printed out the pdf docs at CBS, and for the life of me I can't tell the
difference between what I'm looking at here and the type that the Selectric
put out in 1964.

Rather than interpret, let me just paste in what is "currently" at CBS's
site:

"As is standard practice at CBS News, the documents in the 60 Minutes report
were thoroughly examined and their authenticity vouched for by independent
experts," CBS News said in a statement. "As importantly, 60 Minutes also
interviewed close associates of Colonel Jerry Killian. They confirm that the
documents reflect his opinions and actions at the time."

The White House distributed the four memos from 1972 and 1973 after
obtaining them from CBS News. The White House did not question their
accuracy. "

The THOUGHT they would get away with it.

In 1992, they might have done it.

But NOT today.

And now, two stories out now: (1) CBS investigating HOW they were fooled.
(2) Barnes being outed as a deliberate liar.

http://www.drudgereport.com/cbsd.htm
"CBSNEWS LAUNCHES INTERNAL INVESTIGATION AFTER SUSPICIOUS BUSH DOCS AIRED

Exclusive

CBS NEWS executives have launched an internal investigation into whether its
premiere news program 60 MINUTES aired fabricated documents relating to
Bush's National Guard service, the DRUDGE REPORT has learned.

"The reputation and integrity of the entire news division is at stake, if we
are in error, it will be corrected," a top CBS source explained late
Thursday.

The source, who asked not to be named, described CBSNEWS anchor and 60
MINUTES correspondent Dan Rather as being privately "shell-shocked" by the
increasingly likelihood that the documents in question were fraudulent.

Rather, who anchored the segment presenting new information on the
president's military service, will personally correct the record on-air, if
need be, the source explained from New York. "

And then there is that lying asshole, Ben Barnes:

"A woman alleging herself to be none other than Amy Barnes, daughter of fromer Lt Gov Ben Barnes called into a Texas radio program being hosted by well-known host Monica Crowley.

The woman, stating that her politics differed greatly from her Fathers, stated that he informed her months ago that he was going to "go public" with this story, known to be false. She claims that he has acknowledged the untruthfulness of this story to her over the years. She claims that there are two motivations for his doing this. One, to gain publicity for a book he is writing and, 2 the desperation of the Kerry campaign at this moment in time. Apparently Barnes offered to carry this tainted water if it appeared necessary in the general election to help secure a Kerry victory."

http://itsjustdan.blogspot.com/2004/09/amy-barnes-speaks-out.html

>
> Look at any documents from that era. Typewriting looks nothing like
> the output of a laser printer. There were a few proportional
> typewriters back then.

That and the superscript has led almost a dozen experts now to believe that the document was a forgery.

That thud was the dead body of the "Donkey" falling on the floor with Dan Rather's bullet in it's heart.

561. Murray == cum spot

Kerry FUCKED up the ass by Dan Rather. Murray get sloppy seconds!

Two stories out now: (1) CBS investigating HOW they were fooled. (2)
Barnes being outed as a deliberate liar.

http://www.drudgereport.com/cbsd.htm
"CBSNEWS LAUNCHES INTERNAL INVESTIGATION AFTER SUSPICIOUS BUSH DOCS AIRED

Exclusive

CBS NEWS executives have launched an internal investigation into whether its
premiere news program 60 MINUTES aired fabricated documents relating to
Bush's National Guard service, the DRUDGE REPORT has learned.

"The reputation and integrity of the entire news division is at stake, if we
are in error, it will be corrected," a top CBS source explained late
Thursday.

The source, who asked not to be named, described CBSNEWS anchor and 60
MINUTES correspondent Dan Rather as being privately "shell-shocked" by the
increasingly likelihood that the documents in question were fraudulent.

Rather, who anchored the segment presenting new information on the
president's military service, will personally correct the record on-air, if
need be, the source explained from New York. "

And then there is that lying COCKSUCKER, Ben Barnes:

"A woman alleging herself to be none other than Amy Barnes, daughter of
fromer Lt Gov Ben Barnes called into a Texas radio program being hosted by
well-known host Monica Crowley.

The woman, stating that her politics differed greatly from her Fathers,
stated that he informed her months ago that he was going to "go public" with
this story, known to be false. She claims that he has acknowledged the
untruthfulness of this story to her over the years. She claims that there
are two motivations for his doing this. One, to gain publicity for a book he
is writing and, 2 the desperation of the Kerry campaign at this moment in

time. Apparently Barnes offered to carry this tainted water if it appeared necessary in the general election to help secure a Kerry victory."

http://itsjustdan.blogspot.com/2004/09/amy-barnes-speaks-out.html

CBS, DNC == "FUCKING LIARS FACING BACKLASH OF UNIMAGINABLE PROPORTIONS"

Kerry == "FUCKING STUPID FOR THINKING HE'D GET AWAY WITH IT!"

HAHAHAHA!

Do you want to know the TRUTH? Do you really want to know WHY it happened?

Bob Just said it 4 years ago:

"Fueled by anger, the New Fascists [he's talking about HIS party, the
Democrats] have completely adopted the radical '60s notion of the "honest
con." In other words, they think that because they are "correct in their
beliefs" and because in their minds what they fight is so "evil," just about
any act can be committed for the sake of victory - and certainly, lying is
no problem." [Bob Just, "Fascism, corruption and my 'Democratic' Party" -
7/25/2000]

>
> And if they do turn out to be forgeries, I would think that Dan
> Rather's career is about over.

And so is the election.....

Ans: The Democraps want to win SO BADLY that they'd do anything, ANYTHING.

"Fueled by anger, the New Fascists have completely adopted the radical '60s notion of the "honest con." In other words, they think that because they are "correct in their beliefs" and because in their minds what they fight is so "evil," just about any act can be committed for the sake of victory - and certainly, lying is no problem." [Bob Just, "Fascism, corruption and my 'Democratic' Party" - 7/25/2000]

So they tried to FORGE documents and got openly registered Democrat Dan Rather to do a dog and pony show. That might have worked in 1992, but not today. The BLOGGERS jumpped all over it and (once again) broke a liberal media blackout on the subject.

Now that CBS is caught red handed on the documents, the NEXT hit they and the Kerry Campaign is going to be that Ben Barnes is (1) a Kerry employee and (2) willfully lying.

"A woman alleging herself to be none other than Amy Barnes, daughter of fromer Lt Gov Ben Barnes called into a Texas radio program being hosted by well-known host Monica Crowley.

The woman, stating that her politics differed greatly from her Fathers, stated that he informed her months ago that he was going to "go public" with this story, known to be false. She claims that he has acknowledged the untruthfulness of this story to her over the years. She claims that there are two motivations for his doing this. One, to gain publicity for a book he is writing and, 2 the desperation of the Kerry campaign at this moment in time. Apparently Barnes offered to carry this tainted water if it appeared necessary in the general election to help secure a Kerry victory." http://itsjustdan.blogspot.com/2004/09/amy-barnes-speaks-out.html

It's a blog right now -- and so was the CBS document fraud just 24 hours ago.

By this time tomorrow, Barnes will be exposed as a fraud -- and he'll turn over his bosses at the Kerry Campaign.

THE ELECTION IS OVER!

And now YOU can go back to Canukistan......

>
> The question is: who did it?

John Forbes Kerry ordered it.

The Clintonistas he hired last week made it happen.

And the willing media (CBS -- for running it), the AP and Boston Globe (for assisting), and chucklehead (i.e., openly registered Democrat) Dan Rather for PERSONALLY running with it.

And the REST of the liberal media (especially PBS/NPR) for trying another "blackout" -- that ABC finally broke.

I bet Terry McAuliffe is looking *real* hard at a loaded pistol on his desk right about now.....

http://www.drudgereport.com/cbsd.htm

CBSNEWS LAUNCHES INTERNAL INVESTIGATION AFTER SUSPICIOUS BUSH DOCS AIRED

Exclusive

CBS NEWS executives have launched an internal investigation into whether its premiere news program 60 MINUTES aired fabricated documents relating to Bush's National Guard service, the DRUDGE REPORT has learned.

"The reputation and integrity of the entire news division is at stake, if we are in error, it will be corrected," a top CBS source explained late Thursday.

The source, who asked not to be named, described CBSNEWS anchor and 60 MINUTES correspondent Dan Rather as being privately "shell-shocked" by the increasingly likelihood that the documents in question were fraudulent.

Rather, who anchored the segment presenting new information on the president's military service, will personally correct the record on-air, if need be, the source explained from New York.

And that person is: John Forbes Kerry. He CANNOT escape it. It was done in *HIS NAME*.

This election is OVER!

http://www.hughhewitt.com/index.htm

"The transparency of the ideological bias is so overwhelming as to be funny. The spirit of Walter Duranty lives on in old media, staggering under the repeated blows of swarming bloggers armed with excellent research skills. That CBS won't reveal its sources or its experts tells us a lot about its confidence in the story. The network wants the public to trust it, but the public doesn't...

...Bold prediction: This story will help Bush. Media overkill on the story --this is round three-- underscores media bias far more than a thousand studies. Meanwhile "StolenHonor" isn't mentioned by Woodruff et al. Old media is struggling to get Kerry off the floor, and desperate Democrats are embarassing themselves in their condemnations of Bush's honorable service 30 years ago while pretending ignorance of John Kerry's odd accounts of his four months in Vietnam. Tom Harkin appeared in front of the cameras today to blast Bush's air guard service, an interesting choice since he's been John Kerry's pal in some very different but interesting circumstances as well: Kerry's mini-Munich in Managua in 1985.

But the big loser stands to be old media, revealed again as hyper-partisan and in a rush to peddle any story that it thinks will hurt a Republican --think LA Times and Arnold last year-- and to suffocate any story that could bleed a Democrat."

And then there is that bogus AP story that claimed that a Republican crowd boo-ed Clinton when Bush announced he was in the hospital.

From Powerline -- the BLOG that *busted* the CBS FORGERY:

http://www.powerlineblog.com/archives/007762.php

"We may be inching closer to the truth about the false Associated Press report claiming that a Republican crowd in West Allis, Wisconsin, booed the announcement that President Clinton had been hospitalized, and "President Bush did nothing to stop them."

We have an inside source who was present at the rally and is familiar with the reporters involved. Our source tells us that Tom Hays, whose byline was on the false AP report, was not at the West Allis rally. He is not one of the AP reporters assigned to cover President Bush, and is believed to have been in New York at the time.

Our source says that the AP reporter behind the story was Scott Lindlaw. Lindlaw is one of the AP reporters who cover the Bush campaign. His anti-Bush prejudices are well-known; our source has heard him say that his "mission" is to see that Bush is not re-elected.

On the day of the West Allis rally, Lindlaw was wearing ear plugs in his ears, as he often does to minimize crowd noise. After Bush's speech, he approached another AP reporter and said that he thought he had heard boos, and asked whether his colleague had heard any. The second AP reporter said that she didn't hear any booing. Nevertheless, Lindlaw apparently sent in a story, which wound up for some unexplained reason under Tom Hays' byline, which said:

Bush's audience of thousands in West Allis, Wis., booed. Bush did nothing to stop them.

We will add questions about Mr. Lindlaw to those we are directing to the Associated Press. "

"His anti-Bush prejudices are well-known; our source has heard him say that his "mission" [and every liberal/Democrat posting here] is to see that Bush is not re-elected"

>

Call them toll free?????

Call a spammer toll-free when it costs the spammer for every call
received? That seems pretty silly.

I certainly wouldn't give a toll-free number if I were spamming --
we're talking mental retardation here.

Apparently, the Biblical law not-very-firm of Peroutkitsch and Peroutkaski of Pasadonivitch and Gostovavitch, Communist China and the Old Soviet Untion would have one executed for spamming but all these communist slime would have us all killed anyway.

Achtung!

Let the slime eat their toll-free meat of mangey dogs an their wives.

So to speak, of course. /me//

Yes, there was a forged photo, there was also a real photo. Drudge was not resposible for the forged photo.

Kerry did appear at the same rally as Fonda. Period.

All this shit came from off of Matt Sludges site who is now like a
Trapped Animal desperately trying to escape a trap, and of course we
all know what a Slimeball LIAR he is!

In fact the Bushies had these documents and they have already said
that they are real so unless they totally revese themselves this is a
non story!

Ah, yes, the delusional politics of the Left.

If only they could produce a candidate with sanity,
instead of with lies and trickery. :)

587. DRM From Europe In North America

Newsgroup: rec.radio.shortwave
Date: 2004-09-10 12:19:45 UTC
From: "Fredric J. Einstein" <feinstei@comcast.net>
Message-ID: <um63k0tgj1cu9lf0cim7nrhf68u5povet7@4ax.com>
Source record: 571

Folks,
I'm getting excellent reception of the DRM signal from
Deutsche Welle's DRM transmitter in Sines, Portugal in Detroit, MI on
15440 kHz at 1215 UTC using a TenTec RX-350/Butternut 80/40 Ham
Vertical.

If your receiver is DRM-capable and you live in the eastern
U.S., this is a good "European" catch. There are a few dropouts, but
the musical program is generally received quite well and the fidelity
is excellent.

73,

Fred E.

Message-ID: <0k63k09npphbscku5vl0ptjvs1la37if34@4ax.com>
Source record: 572

Hello all...

I have a 13 year old Sangean ATS-803A that I will "occassionally" listen to. It's kind of hard to get into this because the only shortwave signals that I can reliably pick up are the radio stations (not the shacks). When listening, I will often try to do some dx receiving, but usually become discouraged. I'm considering getting a portable external antenna for it to see if this will help, but don't know where to start. What are some of the "better" portable antennas under $100.00 that I can get for this radio, **and** will not overload the front end with noise?

Thx
DeWat

And when written on Microsoft Word, Times New Roman 12 pitch, printed
and superimposed on the "original document" are exactly aligned.

Jim

From my local rag:

"William Flynn, a forensic document specialist with 35 years of experience in police crime labs and private practice, said the CBS documents raise suspicions because of their use of proportional spacing techniques. Documents generated by the kind of typewriters that were used widely in 1972 space letters evenly across the page, so that an i uses as much space as an m. In the CBS documents, by contrast, each letter uses a different amount of space.
Although IBM had introduced an electric typewriter that used proportional spacing by the early 1970s, it was not used widely in government. In addition, Flynn said, the CBS documents appear to use proportional spacing both across and down the page, a relatively recent innovation. Other anomalies in the documents include the use of the superscripted letters th in phrases such as "111 th Fighter Interceptor Squadron,�? Bush's unit.
"It would be nearly impossible for all this technology to have existed at that time,�? said Flynn, who runs a document-authentication company in Phoenix.
Other experts largely concurred. Phil Bouffard, a forensic document examiner from Cleveland, said the font used in the CBS documents appeared to be Times Roman, which is widely used by word-processing programs but was not common on typewriters."

Hi DeWat,

I have the same radio. The intersting thing about it is that it is hard to overload the receiver.Modern readions have a telescopic whip and rarely can cope with exterial aerials (yes I am even referring to Sony's here as well). The 803A is a littel deaf on its whip and really needs an external aerial. You will find a longwire aerial - about 5 yards long will be fine and even better if you put it through an ATU first. Forget about elaborate expensive aerials, throw a few yards of wire acorss the room and see the huge improvement in signals.

Good DX,
Richard, Warsaw

>
>http://tinyurl.com/5fu5t

That would be this:

A typewriter has a keyboard, with keys for the characters in its font.
The method by which the typewriter actually marks the paper now varies
as greatly as types of printers do, but until the end of the 20th
century was by the impact of a metal (or, later, metallized plastic)
type element against an "inked" ribbon which caused ink to be
deposited on the paper. Carbon paper was sometimes inserted between
multiple pieces of paper, so the impact also caused duplicate
characters to be printed on each layer of paper.

So which end of the 20th century did 1972 occur in?

Broadcast Electronics

Total Radio. Guaranteed.

Why have hundreds of broadcasters attended Broadcast Electronics HD Radio(TM) Seminars across the country? To learn from the experts about HD Radio issues such as audio routing, changing modes on-the-fly, spectral measurements, RF installations, as well as the consequences of next generation HD Radio technologies on system architecture, data delivery and STL requirements.

Our next seminar coinciding with the NAB Radio Show, will be on Wednesday, October 6, from 1:00 until 3:00pm at the Embassy Suites Downtown Hotel in San Diego.

For information:
http://www.bdcast.com/HDRadio/index.html

The seminar is free, but reservations are required. To reserve your place, e-mail HDR@bdcast.com. Not attending the show? Send us a message and we'll follow up with a summary.

At NAB Radio Booth 702, BE will be showing our solutions for Total Radio Program and Data Integration, to take full advantage of your analog, HD Radio and Internet program channels, along with their associated data services to increase listenership and revenue.

Just great - ugh! This comes when I thought the Vietnam issue was fading and the real issues of this campaign might start being discussed fully.

The documents do look suspicious and the matter should be looked into so that the truth comes out. But, I think it is too soon to say that the Dems forged them. Being that it looks like they could have been faked, doesn't the way that the documents were prepared seem almost like they were intended to be discovered as fakes? If someone wanted them to be believable, why wouldn't they have used a typewriter from the period? They're still around. It just seems that there is the possibility that someone wanting to hurt the Kerry campaign could be setting his side up as being involved in a deliberate act of falsehood. I'm no fan of Kerry but someone from the right with a Carl Rove-ish mindset could have been behind getting these documents into CBS's hands knowing full well that CBS would just love to believe them. I think this scenario is plausible; after all, this is politics we're talking about here. It will be interesting to see how it plays out.

The Sony AN-LP1 is a popular portable active loop antenna that's in your general price range.

But before spending money on an antenna, it might make sense to make sure you're looking at the right times and frequencies.

Here's a link with schedules sorted by time or country.

Yep right. That's why you own press is calling to quit.

Guys, this article tells it like it is. The cost is too high for the media to ignore--they are afraid to be swallowed by the quagmire...

How Many Deaths Will It Take?
By BOB HERBERT

It was Vietnam all over again - the heartbreaking head shots captioned with good old American names:

Jose Casanova, Donald J. Cline Jr., Sheldon R. Hawk Eagle, Alyssa R. Peterson.

Eventually there'll be a fine memorial to honor the young Americans whose lives were sacrificed for no good reason in Iraq. Yesterday, under the headline "The Roster of the Dead," The New York Times ran photos of the first thousand or so who were killed.

They were sent off by a president who ran and hid when he was a young man and his country was at war. They fought bravely and died honorably. But as in Vietnam, no amount of valor or heroism can conceal the fact that they were sent off under false pretenses to fight a war that is unwinnable.

How many thousands more will have to die before we acknowledge that President Bush's obsession with Iraq and Saddam Hussein has been a catastrophe for the United States?

Joshua T. Byers, Matthew G. Milczark, Harvey E. Parkerson 3rd, Ivory L. Phipps.

Fewer and fewer Americans believe the war in Iraq is worth the human treasure we are losing and the staggering amounts of money it is costing. But no one can find a way out of this tragic mess, which is why that dreaded word from the Vietnam era - quagmire - has been resurrected. Most Washington insiders agree with Senator John McCain, who said he believes the U.S. will be involved militarily in Iraq for 10 or 20 more years.

To what end? You can wave goodbye to the naï¿½ve idea that democracy would take root in Iraq and then spread like the flowers of spring throughout the Middle East. That was never going to happen. So what are we there for, other than to establish a permanent military stronghold in the region and control the flow of Iraqi oil?

The insurgency in Iraq will never end as long as the U.S. is occupying the country. And our Iraqi "allies" will never fight their Iraqi brethren with the kind of intensity the U.S. would like, any more than the South Vietnamese would fight their fellow Vietnamese with the fury and effectiveness demanded by the hawks in the Johnson administration.

The Iraqi insurgents - whether one agrees with them or not - believe they are fighting for their homeland, their religion and their families. The Americans are not at all clear what they're fighting for. Saddam is gone. There were no weapons of mass destruction. The link between Saddam and the atrocities of Sept. 11 was always specious and has been proven so.

At some point, as in Vietnam, the American public will balk at the continued carnage, and this tragic misadventure will become politically unsustainable. Meanwhile, the death toll mounts.

Elia P. Fontecchio, Raheen Tyson Heighter, Sharon T. Swartworth, Ruben Valdez Jr.

One of the reasons the American effort in Iraq is unsustainable is that the American people know very little about the Iraqi people and their culture, and in most cases couldn't care less. The war in Iraq was sold as a response to Sept. 11. As it slowly dawns on a majority of Americans that the link was bogus, and that there is no benefit to the U.S. from this war, only endless grief, the political support will all but vanish.

(This could take awhile. In a poll done for Newsweek magazine this week, 42 percent of the respondents continue to believe that Saddam Hussein was directly involved in the Sept. 11 attacks.)

We've put our troops in Iraq in an impossible situation. If you are not permitted to win a war, eventually you will lose it. In Vietnam, for a variety of reasons, the U.S. never waged total war, although the enemy did. After several years and more than 58,000 deaths, we quit.

We won't - and shouldn't - wage total war in Iraq, either. But to the insurgents, the Americans epitomize evil. We're the crazed foreigners who invaded their country and killed innocent Iraqi civilians, including women and children, by the thousands. We call that collateral damage. They call it murder. For them, this is total war.

President Bush never prepared the nation for the prolonged violence of this war. He still hasn't spoken candidly about it. If he has an idea for hauling us out of this quagmire, he hasn't bothered to reveal it.

The troops who are fighting and dying deserve better.

"It's the dishonesty, stupid!"

The Dishonesty Thing
By PAUL KRUGMAN

It's the dishonesty, stupid. The real issue in the National Guard story isn't what George W. Bush did three decades ago. It's the recent pattern of lies: his assertions that he fulfilled his obligations when he obviously didn't, the White House's repeated claims that it had released all of the relevant documents when it hadn't.

It's the same pattern of dishonesty, this time involving personal matters that the public can easily understand, that some of us have long seen on policy issues, from global warming to the war in Iraq. On budget matters, which is where I came in, serious analysts now take administration dishonesty for granted.

It wasn't always that way. Three years ago, those of us who accused the administration of cooking the budget books were ourselves accused, by moderates as well as by Bush loyalists, of being "shrill." These days the coalition of the shrill has widened to include almost every independent budget expert.

For example, back in February the Center on Budget and Policy Priorities accused the Bush administration of, in effect, playing three-card monte with budget forecasts. It pointed out that the administration's deficit forecast was far above those of independent analysts, and suggested that this exaggeration was deliberate.

"Overstating the 2004 deficit," the center wrote, "could allow the president to announce significant 'progress' on the deficit in late October - shortly before Election Day - when the Treasury Department announces the final figures."

Was this a wild accusation from a liberal think tank? No, it's conventional wisdom among experts. Two months ago Stanley Collender, a respected nonpartisan analyst, warned: "At some point over the next few weeks, the Office of Management and Budget will release the administration's midsession budget review and try to convince everyone the federal deficit is falling. Don't believe them."

He went on to echo the center's analysis. The administration's standard procedure, he said, is to initially issue an unrealistically high deficit forecast, which is "politically motivated or just plain bad." Then, when the actual number comes in below the forecast,

officials declare that the deficit is falling, even though it's higher than the previous year's deficit.

Goldman Sachs says the same. Last month one of its analysts wrote that "the Office of Management and Budget has perfected the art of underpromising and overperforming in terms of its near-term budget deficit forecasts. This creates the impression that the deficit is narrowing when, in fact, it will be up sharply."

In other words, many reputable analysts think that the Bush administration routinely fakes even its short-term budget forecasts for the purposes of political spin. And the fakery in its long-term forecasts is much worse.

The administration claims to have a plan to cut the deficit in half over the next five years. But even Bruce Bartlett, a longtime tax-cut advocate, points out that "projections showing deficits falling assume that Bush's tax cuts expire on schedule." But Mr. Bush wants those tax cuts made permanent. That is, the administration has a "plan" to reduce the deficit that depends on Congress's not passing its own legislation.

Sounding definitely shrill, Mr. Bartlett says that "anyone who thinks we can overcome our fiscal mess without higher taxes is in denial." Far from backing down on his tax cuts, however, Mr. Bush is proposing to push the budget much deeper into the red with privatization programs that purport to offer something for nothing.

As Newsweek's Allan Sloan writes, "The president didn't exactly burden us with details about paying for all this. It's great marketing: show your audience the goodies but not the price tag. It's like going to the supermarket, picking out your stuff and taking it home without stopping at the checkout line to pay. The bill? That will come later."

Longtime readers will remember that that's exactly what I said, shrilly, about Mr. Bush's proposals during the 2000 campaign. Once again, he's running on the claim that 2 - 1 = 4.

So what's the real plan? Some not usually shrill people think that Mr. Bush will simply refuse to face reality until it comes crashing in: Paul Volcker, the former Federal Reserve chairman, says there's a 75 percent chance of a financial crisis in the next five years.

Nobody knows what Mr. Bush would really do about taxes and spending in a second term. What we do know is that on this, as on many matters, he won't tell the truth.

OK, how could they release documents that had yet to be faked by someone else?

Something to think about.

That's 12 POINT, not 12 PITCH. 12 pitch is smaller (the larger the
pitch, the smaller the type - and we don't use "pitch" in proportional
fonts).

And were drubbed soundly for it, rightfully so. But if you're going
to idict all "left-wing media" for one such story (or even several),
you'll have to also look critically at the right-wing media, which is
for the most part so laughable and such distortions and lies are so
routine that they don't even merit much notice - it's just business as
usual.

>
>Perhaps John Kerry should stop refusing to join President Bush in
>condemning all 527 smear groups?

527 groups? What do they have to do with this? The SmearVets should
be allowed to say whatever they want, as should any US citizen or
group of US citizens. The answer is not censorship and tyranically
shutting down those who disagree with you - the answer is to expose
them as the liars and sleaze that they are.

Your (and Bush's) totalitarian leanings are duly noted.

I haven't seen anything to indicate the White House embraced the suspect documents - afaik, they just released what they were sent in the interest of full disclosure.

While they asked to have all documents related to President Bush's National Guard service released several months ago, the fact an FOI request turned up some boring but new items earlier in the week has probably got them thinking new stuff could turn up any time before the election.

Hopefully CBS will identify the source for the documents if they're proven to be forgeries. Would they really want to be on record as protecting a source who knowingly provided false information to them?

>yes or no?

Yes, but that doesn't mean proportionally spaced fonts. They could
operate at 10, 12 or 15 pitch only, and only by manually setting a
switch and changing the balls. But still, each character took the
same amount of width as the others on the same ball. You press a key,
the platen moved by 1 character width, which was constant.

The "th" in these documents is superscripted and a LOT smaller than
the other letters. Now, I suppose you could argue that the TANG

typist stopped in mid-line, switched the balls, shifted the paper up a half a line, type "th", and then switched the balls back, shifted the paper back down a half a line and continued typing. But that wouldn't pass the giggle test. And besides, the "th" was not just a smaller font like 15 pitch, it was WAY smaller.

Also - even if you could rationally assert that a TANG personnel office had a typewriter that could do proportionally spaced fonts, you'll have a hard time finding one that did kerning. And I seriously doubt that the TANG sent its routine memos out for typesetting.

>Yes. That's what I learned on.

Nope. You didn't learn on proportionally spaced fonts. Selectrics
didn't do that. You are simply misremembering. If you think

otherwise, feel free to find some documentation of a
proportionally-spaced font available for an IBM Selectric. They don't
exist.

> Actually we had to switch every other day
>because the typing teacher thought we also needed to know how to use a
>manual. The Selectric I used had the capability of multiple fonts [one of
>the things you had to learn was how to change the ball] and superscripts.
>Actually, you could use all sorts of nifty typefaces and special characters
>on various balls.

And you think the clerk typist at the TANG stopped in mid-sentence to
change the ball to type a special character for "th" (if there even
was such a ball - I can find no such thing) and then switch back to a
Times New Roman ball (one that exactly matches the Times New Roman
font available on Windows in the year 2000)?

Puh-leeze.

>
>Those IBMs were heavy suckers, incidentally. Not to mention the cast iron
>Olympia office models.

I know - the company I worked for in 1976 sold them - we modified them
for use as computer printers. And I don't recall ever seeing any
specialized font balls with the "th" character, nor any proportinally
spaced fonts.

I have. Plenty. I used to service them. They did NOT do
proportionally spaced fonts. They DID do *different* fonts, but none
were proportionally spaced. You pressed a key, the platen moved by
one character width. Period. That's how the mechanics worked. To
change pitch, you had to set the whole typewriter into a different
pitch mode.

> After
>printing out the pdf images from CBS, I'm struck at how much they remind me
>of the IBM font style we used in my high school class. Those selectrics
>were capable of proportional spacing and superscripts. Now that was in
>1964.

Nope. You are simply misremembering. Try to find ANY cite ANYwhere
that says Selectrics did proportionally spaced fonts. You can't,
because they didn't. Selectric Composers did, but they were really
considered typesetting machines and were NOT likely to be found in a
TANG personnel office.

Plus, even if a 1972 typewriter DID do proportionally spaced fonts,
I'll guarantee it didn't do kerning.

Reruns are often played when the host is taking the day off or there's
technical difficulties. They aren't always announced ahead of time.

You will miss some very informative Special Knowledge programming if you
avoid the religious broadcasters. Most of the SW conspiranoiacs believe
Satan himself is at the top of all the great conspiracies.

The really distressing thing about all this is that it is a huge
distraction from what the election should really be about. All this
Vietnam records stuff is about 95% bullshit - on both sides. They

only value it has is in testing the veracity of the candidates NOW as
they either lie about things or not.

And that makes me suspicious.

"DeWat" <short@wave.com> wrote in message
news:0k63k09npphbscku5vl0ptjvs1la37if34@4ax.com...
Hello all...

I have a 13 year old Sangean ATS-803A that I will "occassionally"
listen to. It's kind of hard to get into this because the only
shortwave signals that I can reliably pick up are the radio stations
(not the shacks). When listening, I will often try to do some dx
receiving, but usually become discouraged. I'm considering getting a
portable external antenna for it to see if this will help, but don't
know where to start. What are some of the "better" portable antennas
under $100.00 that I can get for this radio, **and** will not overload
the front end with noise?

Thx
DeWat

I have the same radio. Hang a piece of 3/8" mesh Hardware Cloth 2'x4' from the curtain rod, behind the curtain, and connect to the folded-down rod antenna with a short flexible wire with alligator clips on each end. At my window, an S3 signal on rod becomes S9 with the mesh. k35454.

OK, and how common was such fancy equipment in bureaucratic orginizations in which pre-printed forms were expected to be filled out with a typwriter with fixed spacing?

SB PROP @ ARL $ARLP037
ARLP037 Propagation de K7RA

ZCZC AP37
QST de W1AW
Propagation Forecast Bulletin 37 ARLP037
>From Tad Cook, K7RA
Seattle, WA September 10, 2004
To all radio amateurs

SB PROP ARL ARLP037
ARLP037 Propagation de K7RA

Sunspot numbers and solar flux rose over the past week. The average of the daily sunspot number for this week compared to the earlier seven days rose nearly 30 points to 57. Average daily solar flux was up over 16 points to 106.1. Solar flux is predicted to rise over the next few days. Predicted solar flux is 135 for Friday, September 10, and is expected to remain around 140 for the next four days or so. Fortunately, the planetary A index is expected to remain low, with predicted values over the weekend, from September 10-13 at 5, 8, 8 and 10.

Bill Burrows, WA7NCL wrote in this week saying he likes to use the K index as an indicator of whether conditions will be good when he wants to operate. You can get the current mid-latitude K index from Boulder via WWV, and it is updated every three hours.

The broadcast is at 18 minutes past each hour on WWV and 45 minutes after the hour on WWVH. You can also hear it on the phone any time at, 303-497-3235, or on the web at, http://sec.noaa.gov/ftpdir/latest/wwv.txt. I checked it just now, and the mid-latitude K index at 0600z on September 10 was 0. It doesn't get any quieter than that.

Bill sent along a great resource for predictions of the K index. It is from NOAA, and is on the web at http://www.sec.noaa.gov/rpc/costello/index.html. There are several text links on the left of the page for the predictions and also some graphs for comparing recent predictions with actual conditions. The prediction itself is on the text link called "Output List." Ideally, we would like to see a low K index along with higher sunspot and solar flux values.

This weekend is the Worked All Europe DX Contest. Conditions should be good. And don't forget the autumnal equinox in less than two

weeks. As we approach Fall, HF propagation will be getting
seasonally better.

If you would like to comment or have a tip, email me at,
k7ra@arrl.net.

For more information concerning propagation and an explanation of
the numbers used in this bulletin see the ARRL Technical Information
Service propagation page at,
http://www.arrl.org/tis/info/propagation.html.

Sunspot numbers for September 2 through 8 were 25, 25, 28, 59, 82,
95 and 85 with a mean of 57. 10.7 cm flux was 93.9, 96.7, 99.3,
103.2, 106.5, 118.9 and 124.5, with a mean of 106.1. Estimated
planetary A indices were 9, 3, 4, 7, 14, 16 and 9, with a mean of
8.9. Estimated mid-latitude A indices were 8, 1, 2, 5, 9, 11 and 4,
with a mean of 5.7.

>learned to type on an IBM ball typewriter.

No they weren't, as I have pointed out in several other posts. There
has never been a Selectric (not a Composer) that could do
proportionally spaced fonts. Try as you might, you'll find no
documentation that says they did.

> Do you remember those? Avocado
>green and about as heavy as a Toyota 4 cylinder engine.

Yes I do. I used to service them in 1976. No proportionally spaced fonts. And they didn't do kerning. And they didn't use the Times New Roman font that is available these days on Windows. Typefaces are very unique - even various flavors of Times New Roman have differences.

Here's a page with type camples from various Selectric balls:

http://www.ibmtypewriters.com/type.html

Which is proportionally spaced? There ARE a few, but they were for the Selectric Composer, which was more of a typesetting machine and not likely to be in a TANG office used for routine memos.

And which matches the typeface in the memos? A Selectric came with the Courier as standard, and it most closely matches Times New Roman, but it's not proportional. Boldface was proportional, but it's not the typeface in the memos.

Problem is, checking the typeface in the memos against any known typeface available at the time is not that difficult, and it will prove beyond any doubt that the memos were not produced on a 1972-era typewriter. These forgeries are not going to hold up. So arguing that there might have been a proportionally spaced font available on a 1970-model Olivetti typewriter produced in Italy or something is moot if the typefaces available don't exactly match the type in the memos.

> I went to a poor
>high school and each of the two typing classrooms had twenty of them.
>
>Additionally, CBS "says" that the documents were authenticated by
>"independent" experts.

I'm not impressed. Who are you going to believe - CBS and their anonymous "independent" "experts", or your own lying eyes? Just look for yourself. Those docs were NOT produced on a typewriter in 1972.

> That's either an outright lie, or the experts had to
>have come from a night job at Wendy's.

I thought I read somewhere that their "experts" were HANDWRITING experts - and they were just "authenticating" the signature. I don't think they even considered the typography.

> It's a little hard for me to believe
>that even a rookie document authenticator wouldn't be looking for that kind
>of thing.

Me too. But an article in the American Spectator (I know, I know - right wing rag and not particularly reliable, but take this with a grain of salt and weight it as you wish, the truth will eventually come out) claims that these memos have been floating around for many months but nobody would touch them because they are so obviously fake. But Dan Rather got a bug up his butt and pushed it through, over the objections of other CBS people.

I read that elsewhere as well - that this 60 Minutes story only got on the air because Dan Rather personally pushed it over other people's objections. If so, his career is (and should be) toast.

The truth will come out, and I don't think it's going to be pretty.

Check here:

http://www.ibmtypewriters.com/type.html

Which typeface is used on the memos?

Look closely. Look at serifs, spacing, etc.

There were no typewriters that did kerning. (Where space between
letters is adjusted for each possible letter pair.)

The superscripts in the questioned documents are not just shifted up
half a line. They are fractional height and width. They are not as
tall or wide as 15 pitch type.

What I learned on was definitely NOT a composer. Looking at some photos,
it's obvious that I learned on a selectric II.

As I said in another post, I bow to you here. Too many years have gone
under the bridge. I'm sure now I learned on a Selectric II. If you
serviced them, you'd know what they were capable of, so that's that.

The Selectric did not do proportional spacing.

>OCR, Manifold 72, Symbol 12

None of these are proportionally spaced. None of them have a "th",
"nd", "st", etc. character. The Composer didn't do kerning. And none
of the available fonts matches the font used in the memos.

http://www.ibmtypewriters.com/type.html

>

ROTFL!!! As if any clerk/typist would do so in a routine memo.
Jeeze...

Aside from which, the "th" in the memos is even too small for the
smallest available Selectric font.

>and there were many fussy officers
>who desired these things in their correspondence. I know this because
>I was a clerk-typist and secretary for the Federal Government Civil
>Service and U.S. Army command in St. Louis, MO in the early 1970's,

You never produced the kind of "th" that is in these memos in the
early 70's. Look at the documents yourself - you obviously have not
seen them if you're arguing that they could have been made by rolling
the platen a little bit and switching the type ball.

The main "critique" of these documents seems to be the superscript th and the proportionate spacing. Some of the "official" and unquestioned documents released by the Bush White House earlier this year also have superscript th and proportionate spacing. So either all these documents are fakes, in which case the White House has released fake documents and called them real, or all the documents are real, in which case Bush defied a direct order and pressure was placed "from above" to "sugar coat" his evaluation.

100 metres/110 yards of wire is on the house on the eves, held up by Xmas light holders. It's just speaker wire (what was available) and has been there for about 4 years now. Connected to a balan and grounded. Works very well. Listening with an Icom R75, ATS404, YB400, but mostly the Icom with this antenna.

Agreed. Try various wire lengths and pick what works. Overloading may or may not be a problem depending on where your live, e.g., middle of the N Amer continent generally doesn't get overloaded. I have among my collection an ATS 909 and 505, YB400, YB300, none subject to overload on fairly long wires. Though strong signals (e.g, BBC, RN) are not improved from the whip.

I made one of those "broomstick" antennas and have it in the attic. So-so
results. In process of setting up 100' longwire in back yard.

Perhaps we could revert completely to more historical names like Radical and
Reactionary, or Spiders and Bees. (If you know the classic literary
reference for the latter, you get 10 points and a gold star.)

That's been pointed out to me. I bow on this issue. SemiScholar has very kindly supplied a site that will show actual typefacing examples. I was speaking out of my own memory of how different the "look" was between the Olympia manual models and the IBM Selectric II that I learned to type on in high school. Blame it on age and poor memory. Although there is a huge difference in the look, it seems to me now that the difference is due to the fact that the old manuals weren't able to make a line of type even, top to bottom, whereas the 'ball' on the selectric made for a neater look. Superscripts were also available as a function on [at least] the Selectric II, but [As again, SemiScholar pointed out] they weren't able to 'kern' the typesetting.

This business about the documents that the White House released being "exactly" like the CBS 'uncovered documents' intrigues me, though. Since they ALL would have been produced at approximately the same time, I would have to wonder why they all look the same.

Additionally, I've posted an article on the dispute quoting one expert as saying that she was able to produce an exactly similar document using her own word processing equipment. I just wish they had said something about the rest of the examination of the actual document. If there were no impact marks on the paper, it would have been conclusive evidence [it seems to me] that NO typewriter of any kind produced the documents.

Aging paper is not that difficult, but you can't produce a typewritten document without a typewriter without missing the indentation of the ball or strikers or whatever that a typewriter produces. Even after many years, a magnifying glass would reveal that much.

It's already connected to the Kerry campaign. Who do you think CBS got
the docs from in the first place?

Kerry is toast.

More than likely the document would have been typed on a cheap lowest-bidder typewriter by an E-3 following a standard format. The idea a selectric would have been used for a routine document is silly.

Amateur Radio Newsline™ Report 1413 – September 10, 2004

Amateur Radio Newsline report number 1413 with a release date of
Friday, September 10th, 2004 to follow in 5-4-3-2-1.

The following is a Q-S-T.

Hurricane Frances strikes Florida and ham radio is prepared. Hear the ham radio first responders in action on Amateur Radio Newsline report number 1413 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: HURRICANE FRANCES VS. HAM RADIO

Hurricane Frances pounded Florida with high wind and heavy rain after it smashed across the state's East coast. Close to 4 million residents lost power and telephone service. Cellular phone networks that survived Frances’s gale force winds quickly became overloaded. Enter ham radio. Amateur Radio Newsline’s David Black, KB4KCH has been following the story from our South-East bureau in Birmingham, Alabama:

--

When Hurricane Frances hit Florida on Labor Day weekend, the storm ripped roofs off buildings, toppled trees and cut power to about 4 million people. Also lost was part of the states telephone and cellular service. This created a communications vacuum.

But hams affiliated with SATERN - the Salvation Army Team Emergency Radio Network, A-R-E-S, and the Hurricane Watch Net were expecting Frances. Radio amateurs had been tracking this storm as it ravaged its way across the Caribbean. And it was ham radio that let the world know of the destruction the giant storm had caused as it hit some of the islands:

--

“Roger roger. On Elutheria Ill say about 40 percent of the structures have damage. In the Rainbow Bay area where I live I would say about 70% of the hhomes here have structural damage. Over.”

--

Once a Category 4 hurricane with winds of 145 mph, Frances had weakened to a Category 2 storm as it neared Florida. Winds dropped to a peak of 105 mph as it made landfall at Sewall's Point, north of Palm Beach, around 1 a.m. Eastern Daylight Time on Saturday, September 4th. Ham radio operators affiliated with

the Hurricane Watch Net tracked its approach:

--

“This is KA5E with the Hurricane Watch Net. We are currently taking measured weather reports out of the affected area for Hurricane Frances. Do I have any stations on with pdates or signifigant weather reports. KA5E, over.”

--

The powerful storm hit Florida with ferocious winds and sheets of rain. The hurricane was so large and slow moving that its western outer edges had began arriving on the east coast on Saturday morning. On Sunday morning its eastern edges were still pounding the coast from which 2.5 million people had been told to flee. Repeaters interconnected using I-R-L-P and Echolnk were pressed into service to help coordinate the latest round of evacuations:

--

“KC4PNC KB1CYO net control. Go ahead sir,”

“They have called for mandatory evacuation for Hillsboro county for manufactured homes and also mobile homes. They have not ordered a mandatory for low lieing areas but they are strongly recommendng it.”

--

And as evacuee’s poured into shelters, communications volunteers were needed. A call was put out over the interlinked repeater network and the hams responded

--

“We are looking for any volunteerr Amateur Radio operators to help with shelters. We have eight shelters open right now. Those are being manned. However, since its a declared evacuation all of the other shelters will be opened and we are looking for vlunteers to man those shelters. KC4PNC.”

--

As Frances path of destruction hit Florida's central Atlantic coast counties, blinding rain squalls drove clouds of sand into the air. At the same time high waves thundered onto the beaches. One ham watched as his rain gage was torn away and white caps pounded ashore:

--

“Any kind of rainfall accumulation?”

“No, that gage blew away but I can tell you that we are in a high tide area right now and I can see the tides up about a foot and a half and I have water coming over my seawall. But its not a problem. We are still at a much higher elevation. The water is over the seawall along the Intercoastal Waterway.”

--

As palm trees rained coconuts and then toppled over and buildings suffered extensive damage there was also a tragedy at sea. And the U-S Coast Guard turned to Amateur Radio for help:

--

“I want to remind the net that the Coast Guard has asked us to lend assistance in the search for the Anna Marie. It is a vessel that went down off the coast of Sarasota this evening about 10 to 12 miles out. Any assistance or any information on the Anna Marie that went down with the crew 10 o 12 miles out of Sarasota, the U.S. Coast Guard would appreciate your assistance.”

--

At airtime its not known what happened to the Anna Marie nor the fate of its crew. But as the search continued, there was yet another threat. Early on Sunday the 5th, the massive weather system spawned a tornado, and the warning went out over the I-R-L-P ham radio network:

--

“The tornado is expected to be by Bostwick by by 2:45 Eastern, Forholm by 3:00 a.m. and thats all I have.”

--

As that twister touching down the National Weather Service office in Jacksonville issued a tornado warning for Northern Clay County including the city of Orange Park. Also affected were St. Johns, Clay, and Putnam Counties. And as dawn was breaking radar picked up a developing tornado near Doctors Inlet moving West at 45 mph. Only some damage to roofs was reported.

But reporting weather was not the only chore radio amateurs were involved in. Another as health and welfare. Letting worried relatives and friends know about those stuck in Frances path. Many like this central American station who was happy to hear that the hurricane was headed away from his daughters location:

--

“OK. Great. Thank you very much. I appreciate that information. We are here in a location where we do not have any TV or any other communication. We are on the beach on the West coast of Panama. So thanks very much I do appreciate it. This is HB1XRO and the handle is Bob.”

--

By Monday afternoon, Frances had crossed the eastern Gulf of Mexico and made its second landfall in Florida's northwest Panhandle section some 20 miles south of Tallahassee. Now it only a tropical storm with sustained wind near 65 mph. Damage was mainly to power and telephone lines. At that point the forecasters were predicting the storm would move north-northwest at about 8 mph, and was not expected to regain hurricane strength.

Frances soaked Georgia, dumping 11 inches of rain in a 24 hour period in the town of Patterson.

Media reports blame Frances for at least seven deaths in Florida, including two people who were killed Saturday when the roof of he building they were in collapsed. There were also two deaths in the Bahamas. One of these was a teenager who was reportedly electrocuted when he tried to hook up a generator to a power mains that was still on.

With thanks to the hams who supplied the storm audio over the Internet used in this report, I’m David Black, KB4KCH at the South-East bureau in Birminham Alabama for the Amateur Radio Newsline. (ARNewsline(tm))

**

RESCUE RADIO: HAM RADIO PREPARES FOR IVAN

And its not over yet. As we go to air Hurricane Ivan is making its way cross the Caribbean and could strike the United States. CQ's newsdesk reports that Amateur Radio at the National Hurricane Center, WX4NHC, was to be reactivated for Hurricane Ivan at 2 PM EDT Thursday, Sept. 9, and will be active on Friday-Sunday 8 AM-11 PM EDT. The Hurricane Center will be on the Hurricane Watch Net on 20 meters as well as the VoIP Hurricane Net,. The latter is a combination of IRLP and Echolink stations.

The Cayman Islands and Jamaica are the next locations in the path of this extremely dangerous Category V Hurricane which now has maximum sustained winds of 160 MPH per the latest advisory issued at 5 AM EDT Thursday morning.

VoIP Net Control Station Rob Macedo, KD1CY, says they are trying to coordinate with the IRLP node owners on the Cayman Islands and Jamaica on usage of their nodes and liaisons to those affected areas. Currently there are no Echolink or IRLP nodes in Cuba.

National Hurricane Center advisories indicate that the path of Hurricane Ivan is not clear after it passes over Cuba on Sunday. Residents in the affected area should monitor the situation closely. There is a possibility that the hurricane's forward progress could slow and emergency nets may be activated for an extended period of time. It also means that ham radio communications volunteers could have a lot more to do in the coming days. (CQ)

RESCUE RADIO: FIRST RESPONDERS SAY THEY NEED INTEROPERABILITY

Meantime, three years after the nine eleven terrorist attacks, thousands of police and fire divisions in cities and counties across the United States still

do not have coordinated communications capabilities. So says the First Response Coalition and Amateur Radio Newslines Norm Seeley, KI7UP, has the details:

--

The First Response Coalition calls this lack of interoperability an unresolved national crisis and it has decided to take on the FCC and big business to solve it. This as the organization reaches out directly to more than 43,000 local police and fire officials to solicit their help.

First Response wants Congress to overturn the FCC decision to award spectrum to Nextel in favor of a plan that deals both with interference problem and the interoperability crisis. Gene Stilp, who is the First Response Coalition coordinator says that the FCC plan involving Nextel is wrong for police officers and firefighters. This is because it only takes on only part of the interference issue. Moreover, it does not do anything about the lack of interoperability between emergency response groups.

The First Response Coalition says that this outreach program is getting a very favorable grassroots response. So far over 17 fire chiefs have joined ranks with the group in opposing the FCC's current plan for what they call a give away of taxpayer-owned spectrum.

For the Amateur Radio Newsline, I’m Norm Seeley, KI7UP.

--

About the only emergency responders these days who have full two way radio interoperability are radio amateurs. Hams had voluntarily set world-wide communications standards many years ago. (First Response Coalition release)

**

RESCUE RADIO: AMBER ALERT LINKS UP TO THE WEB

The nation's Amber Alert system has become a web available tool. This, thanks to a portal made available by the E2C company of Scottsdale, Arizona.

Until now, Amber Alerts have been a primarily radio based technology. This meant that messages had depended on the nation's Emergency Alert system for relay and delivery. The new Web-based system can process and transmit the same emergency information more quickly and make it available to a wider variety of devices. It also comes with software that pinpoints the location of a child abduction and sends out emergency notification targeted to that geographic area.

As of now, Amber Alert managers in 11 states have access to the new portal. Use of the system is expected to expand to the 49 states that have statewide Amber Alert systems. Hawaii has no statewide system but has several local alert networks. (E2C)

**

THE BPL FIGHT: VK 4-WHEELERS JOIN BPL FIGHT

A Four Wheel Drive hobby group has joined the fight against BPL. Its happening down-under. WIA Newscaster Phil Waite ,VK2DKN, reports:

--

The VKS737 4WD HF Radio Network, joined the fight against BPL last week, following the recent WIA news broadcast by Jim Linton, VK3PC, highlighting the BPL industry's attack on interference protection for so called `recreational radio services' and an approach from WIA Director, Glen Dunstan, VK4DU.

VKS737 are currently circulating their members with information about the threat BPL poses to their activities, and encouraging their members to lobby politicians on the issue.

The VKS737 network is used extensively for emergency communications in remote areas, as well as serving the communications needs of outback travellers. Their current membership is around 7,000 and they potentially reach 250,000 Australian 4WD owners.

Many of their network base stations are in urban areas potentially affected by BPL and VKS737 members are rightly concerned about the threat presented to their HF communications. Their organisation is also associated with the Australian Citizens Emergency Radio network, who provide similar services on citizens band frequencies.

Phil Waite, VK2DKN, for the WIA National News.

--

The Wireless Institute of Australia is discussing ways the two organizations can assist each other in the fight against BPL. (WIA News)

**

INTRUDER WATCH: STRANGE SIGNALS AT 7238 KHZ

According to Bob Gonsett, W6VR, for the past three weeks, hams in the southwestern U.S. have been reporting a mysterious signal in the 40-meter band. One party described it as a "mechanical sound." Another speculated that it was "data."

Engineers at Communications General Corporation in Fallbrook California took a quick look at the situation on Septeember 6th. And at 3:20 P-M Pacific Daylight Savings Time the company found several close-spaced CW carriers. The four strongest signals at CGC's lab were on 7238.063, 7238.150, 7238.237 and 7238.412 kHz. The signal on .237 was the strongest of the group and the frequencies reported should each be accurate to better than plus or minus 30 Hz.

Communications General says it is not sure if the signal was coming from one specially modulated transmitter or from transmitters at different locations. Bob Gonsett adds that it will be interesting to learn the source or sources of these transmissions. (W6VR, CGC)

**

SAFETY: RADIO ENGINEER ELECTROCUTED WHILE WORKING ALONE AT TOWER SITE

The hazards of working near power lines has been brought front and center again. This with word that a Wyoming broadcast engineer has killed while working at a transmitter site in Colorado.

Thirty nine year old Robin Bradley Thomas was killed while working alone, trying to install a radio transmitter. The accident happened about 18 miles northwest of Red Feather Lakes in northern Colorado. Indications are that Thomas of Cheyenne died when he accidentally came in contact with high-voltage and was electrocuted. Thomas was described as an experienced engineer who contracted out his services. (CGC)

**

RADIO LAW: CELLPHONE PROVIDERS SUED OVER LOCKED PHONES

A consumer watchdog group sued three cellular telephone companies. This. for "locking" their phones to make it harder for customers to switch carriers.

The Foundation for Taxpayer and Consumer Rights is the group that filed the suit in Los Angeles. It accuses AT&T Wireless Services Inc., T-Mobile USA Inc. and Cingular Wireless, of using software in their handsets that prevents them from being used on a competitors' network.

All phones in question use Global System Mobile communications, or GSM technology which effectively limits a handset to a specific carrier using a non interchangeable SIM card. The lawsuit complains that this is an unfair and deceptive business practice under California state law.

The phone companies are defending their policy. They say that they routinely subsidize handset cost and would loose substantial revenue if they allowed customers to easily use those phones with another carrier. (Foundation for Taxpayer and Consumer Rights)

**

REPEATER COORDINATION: METROCOR MORITORIUM TO END DECEMBER 15

Attention repeater owners in the New York metro and surrounding area. An impoerant deadline is aproaching.

You may remember that your new area frequency coordinator MetroCor had put in place a two year moritorium on new co-channel coordinations when the group came into being. It had also asked existing repeater operators who have documented proof of expired coordination from the now defunct Tri State Amateur Repeater Council to update their coordinations with MetroCor.

In a posting to QRZ.com, MetroCor's Mario Sellitti, N2PVP, says that this moratorium had minimized the possibility that new coordinations might inadvertently displace longstanding users of the spectrum. It also helped to avoid creating disputes where none previously existed.

Now, says Sellitti, this period must now come to an end. He says that MetroCor will be terminating the moratorium as of midnight, Saturday, December 15th.

But he adds this qualifier. Sellitti says that anyone in the area having a repeater or knowing of one belonging to another ham, and that repeater qualifies for this exception, to please refer to MetroCor's on-line F-A-Q in item No. 11. This will give you or the person with the other machine the information needed to gain new coordination through MetroCor. Those in need will find it on-line at www.metrocor.net/faq.htm. (MetroCor, QRZ.com)

**

THE SOCIAL SCENE: W9DXCC CONVENTION IN ILLINOIS IN SEPT

Turning to upcoming social events, Joe Shrader, W9JUV says that the 52nd annual W9DXCC Convention and Banquet takes place Saturday, September 18th. This years venue is the Holiday Inn Chicago in Elk Grove, Illinois with noted DXer and author John Devoldere, ON4UN, as the featured banquet speaker.

John Devoldere leads the world in countries worked on 80 meters with over 350, and is first ham outside of North America on 160 meters with over 290 contacts. He is also an avid contester was elected to the CQ Contest Hall of fame in 1997. Devoldere is also one of the best speakers in the hobby.

This is a show you won't want to miss. For registration and lodging information visit the www.qth.com/w9dxcc on the world wide web. (W9JUV)

**

THE SOCIAL SCENE: SVHFS IN NC NEXT APRIL

And make plans now to attend the 9th Annual Southeastern VHF Society Conference. The 2005 gathering will be held in Charlotte, North Carolina next April 29 and 30.

Guy Titman, K4NUS has offered to be host and facilities chair for 2005 gathering. More information is on the web at www.svhfs.org (VHF Reflector)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

HAM TECHNOLOGY: HAM DREAM DIGITAL VOICE QSO

What is believed to be the first two-way digital voice contact in South Africa took place between ZS1AN and ZS1AU on August 10th. Contact was made on 15 meters with both amateurs using Ham Dream software for the QSO. Amateur Radio Newsline's Bruce Tennant, K6PZW has the details:

--

Ham Dream is an open-source version of the Digital Radio Mondiale broadcasting standard. It was adapted for amateur use by HB9TLK and gives hams the ability to talk almost noise free. Here’s how.

Speech is converted to digital data using a low-bitrate vocoder analog to digital converter. The data is then transmitted using a high-speed modem. At the receiving end the data is decoded to recover the audio at the receiver. Although still in the evelopment stages, there is worldwide interest in Digital Voice, which can deliver very high signal-to-noise ratios over medium quality narowband S-S-B channels.

For those who want to experiment, HamDream software can be downloaded free of charge from the South African Radio League's website at www.sarl.org.za.

For the Amateur Radio Newsline, Im Bruce Tennant, K6PZW, reporting.

--

Further information on digital voice in ham radio is available on HB9TLK's website. Its in cyberspace at www.qsl.net/hb9tlk (GB2RS)

**

EMERGING TECHNOLOGY: TiVO OVER THE NET

Federal regulators have approved technology allowing TiVo subscribers to send copies of recorded shows over the Internet. In its decision, the Federal Communications Commission said the new feature by Alviso, Calif.-based TiVo has enough protections in place to prevent mass distribution of copyrighted material.

The technology would allow a TiVo subscriber to download broadcasts to a computer and send copies of recorded shows over the Internet to an office or home or to a small circle of friends, as long as they are on the subscriber's registered account. The Motion Picture Association of America, the National Football League and others complained that the new service would allow the 1.6 million TiVo subscribers to redistribute shows over the Internet to virtually anyone, anywhere. (Published news reports)

**

EMERGING TECHNOLOGY: FCC TAKES NEXT STEPS TO PROMOTE DIGITAL TV TRANSITION

Its full speed ahead with the conversion to digital television. So says the FCC as it issues a Report and Order that it says implements several steps necessary for the "continued progress of the conversion of the nation's television broadcast system from analog technology to digital television.

The paper covers almost every aspect of the conversion process over the next several years. It also highlights the coming events and should be considered "must reading" for those interested or involved in the future of digital T-V. You will find it on-line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-250542A1.doc (CGC, FCC)

**

WORLDBEAT: NEW UK REPEATER SERVES LONDON AND KENT

And if you are planning a trip to the UK, don't forget your reciprocal license and your HT. And be sure to try out a new repeater serving the needs of hams in the North Kent and South East London England area.

Its call is GB3OK and it is sponsored by the Bromley Repeater Group and it went on the air on the 16th of August. It transmits on 145.650 MHz with the standard 600 Kilohertz input offset and requires a 103.5Hz tone to access the receiver. The trustee of GB3OK or repeater keeper as the British call them is Tony Ravelini, G1HIG, in the city of Kent. (GB2RS)

**

DX

In DX, HA3JB tells the Ohio Penn D-X Newsletter that he will operate as SU8BHI from Cairo, Egypt. This, from September 21st through December 20th. Activity will include CW, PSK, RTTY, SSTV and some SSB. QSL direct to HA3JB. (OPDX)

And UA9OBA, has been active as JT100M. This is a special callsign being used until September 13th during the Mongolian leg of the Altay-Himalaya Transasian off-road expedition. Activity has been mainly on 20 meters SSB around 14.180 Mhz. QSL via UA9OBA. (OPDX)

**

THAT FINAL ITEM: THA FINAL ITEM: A KEYLESS T-HUNT

And finally this week, a Michigan ham radio operator from the Ford Motor Company was part of a two man team that has solved the mystery of malfunctioning remote keyless car door openers, garage door openers and other such devices in Las Vegas, Nevada. A problem with R-K-E devices that had baffled many residents since a massive outage began last February.

Las Vegas resident Bill Zawistowski was one of those complaining. He and others vented their frustration to anyone who would listen including the FCC. Ford responded by flying in two R-F detectives. Earl Morse, N8SS, represented the auto maker and Nabil Hachem was from Alps Automotive, which makes the keyless car-door devices. And it did not take very long for Morse and Hachem to figure out what was happening:

--

Morse: "When we got there we discovered a signal in the paassband of the RKE receivers which was actually strong enough to keep the RKE from activating its own receiver in the vehicles. We investigated further and found it to be a stuck repeater. We can leave it at that."

--

Morse says it was not much different than a ham radio T-hunt except for the frequency:

--

Morse: “Having experienced Fox Hunting first hand. the only difficult art was shifting all my equipment to that frequency. All of my antennas were relatively useless because they were cut to 2 meters an 440 so we had to make some new antennas for the 315 Mhz. band.”

“We did have one advantage in that the RKE group had purchased a Doppler direction finder and we utilized that a lot.”

--

Morse tells Amateur Radio Newsline that once they found the transmitter it only took a few phone calls to get it turned off. The problem did surface again a week later but this time one landline call got it to go QRT for good. (ARNewsline (tm))

**

NEWSCAST CLOSE

With thanks to Alan Labs, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's W-I-A News, that's all from the Amateur Radio Newsline(tm). See my "Breaking News" post. Considering what you've just written, the announcement by the White House, that they have no plans to independently authenticate the documents seems extremely suspicious.

How?

653. Radio Netherlands via WRMI now only on Sat/Sun

Newsgroup: rec.radio.shortwave
Date: 2004-09-10 18:19:42 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <chsr7unug1@sparta.btinternet.com>
Source record: 638

Jeff White of WRMI writes: "As of tonight, a lot of the WRN hours that we carry are going to be replaced by Brother Stair, who has purchased 0400-0900 UTC seven days a week on 6870, plus 1200-1400 UTC Monday-Friday on 15725. This will obviously affect a lot of the WRN relays we have been carrying from various stations, including RNW. We will still carry WRN on weekend mornings and afternoons as before."

Radio Netherlands will therefore be heard on Sat/Sun ONLY at 1200-1300 UTC on 15725 kHz. This is not an "official" relay, so does not appear in our published schedule.

The documents that CBS published were obviously photocopied repeatedly
or probably even faxed at least onde. They're not very high quality.
That leads me to believe that CBS doesn't have the originals.

There are many questions about this that need to be answered. One
such question is: given how easily these documents were discovered to
be fakes, and assuming that the fact it would look bad for the Kerry
campaign if a dirty trick like this were exposed, who was it that
actually created and pushed the fake documents?

We need to know ALL the answers.

Additionally, did you see where someone was saying that one of the letters in Kerry's file leading to his being awarded was also suspected to be a fake? Don't ask me to cite this. I can't. I just saw in passing yesterday.

It seems to me that ALL of these documents ought to be given some kind of vetting by people who are experts on that kind of thing. Look at you. You serviced the IBMs and the discrepancy was obvious to you. It just seems almost unbelievable that the parties in question wouldn't have people with some kind of expertise examine these documents.

There are two documents available at
<http://www.drmrx.org/receiver_mods.html> which should get you a lot
further already. The Fraunhofer mod was quite a bit more complex, but
the document contains a nice mixer circuit (a more inexpensive version
of which is discussed in the second document). Here in .de a finished
mixer board as sold by Sat-Service Schneider
<http://home.t-online.de/home/sat-service/sat/DRM/DRM.htm> is quite
popular, mostly in the crystal version. Very small thing it seems (thus
popular for portable rx mods), and they've got a PDF with the circuit,
too. All you'd need in addition to that would be a small case with a 3.5
mm headphone jack and a cable (as short as possible) with a matching DIN
plug for the IF output jack.

Stephan

Most of the campaigning (at least, the parts of the campaigning that
makes it through the media filters) has been a distractions.

>All this
>Vietnam records stuff is about 95% bullshit - on both sides.

But it is effective bullshit, at least for one side.

This morning, I heard the first radio report of the Shrub's newly
released TANG records, along with mention by the reporter that the
documents may be forgeries.

In contrast, none of the radio reports I've heard about the Swifties
allegations about John Kerry included any mention of the fatal
problems with their veracity.

One 70' wire running N-S, and one 200' wire running W-E. Both are transformer matched, with the co-ax feed buried running to the house.

I'm at least as suspicious of the claim that someone could print out
a document using Word and an unspecified printer and make it look
exactly the same as the documents in question. Though
standardization in equipment is stronger than it used to be,
printers (especially printers that have been heavily used) produce
small differences among themselves.

>The whole thing stinks, and it needs to be fully exposed, no matter
>who ends up getting hurt. Dirty tricks have no place in a democracy.

> any surprises.

dxAce correctly recalled Dick Bash. It was the Bash guides that actually matched the real test questions on the exams. The ARRL manuals made up their own questions that were very similar and gave a person adequate practice to handle the test; the difference was that you could memorize the answers to the Bash questions and pass the test without understanding the material. That is, if the answer to the Bash question about resonant frequency was "(c) 1.4 MHz", then the answer to the actual test question would also be (c), 1.4 MHz.

It was said at that time that the reason the FCC dumbed the test down by orders of magnitude was directly and mostly related to the Bash guides. That, and the fact that amateur radio was acquiring General Class licensees who couldn't explain how a flashlight worked or tune a transmitter, made the Bash guides a source of a lot of resentment among amateurs.

The really big problem is that Microsoft didn't have a spreadsheet program until after (or at least VERY close to) Killian's death. Microsoft Word didn't appear until around 1983.

Most likely these documents were made by someone who wasn't alive during the time Killian was alive.

For receiving, an active loop on a rotator - it has a very deep null
which is useful. Mounted in the attic atm for testing, but due to be
moved to the bottom of the garden further away from all the tv/computer
etc interference. It feeds the receivers via a 4-way multi-coupler.

I can also use the ham antennas if I want to.

673. Sony SW55 - SSB problem

Newsgroup: rec.radio.shortwave
Date: 2004-09-10 20:15:52 UTC
From: g8tzl@hotmail.com
Message-ID: <4a23e0ac.0409101215.11f8c329@posting.google.com>
Source record: 658

I have just bought a Sony SW55. I am generally very impressed with the radio in terms of both performance for a small portable and build quality. However , I am experiencing a problem regarding SSB which is not related to warm up drift or the SSB "warble" problem.

When I tune to a known stable frequency such as the weather Volmet transmission on 5.505MHz USB , around 50% of the time the radio is more or less spot on frequency and you can tune across the signal in the normal way. However , at other times when I switch on I need to tune down 1KHz to 5.504MHz to resolve the signal and as I tune across the signal I can again resolve clear audio another 1 KHz lower on 5.503MHz - its as if there are 2 spots to resolve the signal as you tune across it!. Sometimes I can switch off the radio and switch on again and I am back to spot on frequency of 5.505 - other times I need to rest the radio overnight before it will come back onto frequency.

I wonder if anybody else has experienced this problem? Hopefully its an alignment problem or something simple. Does anybody know any fix or whether there is a Sony radio "frequent faults and fixes" web site.

regards

Martin

Very true. And very exasperating. Kerry should be absolutely *pounding* Bush. Bush has *nothing* to brag about, his record is one of dismal and abject failure. But I don't see Kerry doing an effective job at this.

Actually, Kerry HAS been talking about a lot of Bush's failures - but it's not coming through in the media so well. The media is more interesting in these meaningless little squabbles.

At this point in time it may be a good idea for Dan Rather to grab his ass and
hold on.

I saw something vague about it, but probably on usenet, so I don't
count it for much. But if there are any fake documents on either side
for any reason, they should be exposed and dealt with.

Indeed. But from what I have read, most parties DID look at the docs
and decide not to pursue them. I have heard that they have been
floating around for many months, being shopped all over the place, but
nobody would touch them because they concluded they were fakes, or at
least too suspicious.

Until Dan Rather decided to grab them and run with them.

In that case, the sooner Rather gets run through the closest paper shredder
the better. This is just ridiculous and it's keeping us from being able to
concentrate on really important election issues like whether or not Theresa
Heinz-Kerry should have said that anyone who wouldn't like Kerry's Health
proposal is an idiot.

I heard the other day that the Dept. of Defense was investigating the
letter in Kerry's folder supposedly written by former Navy Secretary
John Lehman. Since he denied having written it, there seems to be an
explanation needed. One commentator on TV said if it turns out to be a
planted document, that this would just about end his campaign. We shall
see.

The Guardian points out that the White House has doctored
Bush's records:

"White House officials also could not explain the final two
entries of Bush's official flight logs that refer to him
being assigned to work as an instructional pilot in late May
1972 at a Texas Air National Guard base. Bush left the base
for Alabama before the two dates listed on the flight logs
and his records show he wasn't paid for work on those dates.

The logs have a code indicating the assignments were
eventually deleted from his official records. White House
spokeswoman Claire Buchan said the entries could have been a
paperwork error. "

Maybe they don't want to open that Pandora's box.

MSH,

FWIW: In the news today the guy's wife is claiming that the
Bush Military Records ?documents? that are attributed to her
dead husband appear to be "FAKES".

* His widow, Marjorie Connell, told ABC News Radio:
"The wording in these documents is very suspect to me.
I just can't believe these are his words."

* "Col Killian's son, Gary Killian, who also served in the
National Guard, said he doubted his father would have written
an unsigned memo which said there was pressure to "sugar coat"
Mr Bush's performance review.

* Rufus Martin, the personnel chief in Col Killian's unit at
the time also said he believed the documents are fake.
"They looked to me like forgeries. I don't think Killian would
do that, and I knew him for 17 years," he said.

* Independent document examiner Sandra Ramsey Lines said the
memos appeared to have been written on a computer with Microsoft
Word software.

* Ms Lines, a document expert and fellow of the American Academy
of Forensic Sciences, highlighted a small superscript "th" in
the words "111th Fighter Interceptor Squadron". She said such an
effect was created automatically with Microsoft Word. "I'm
virtually certain these were computer generated," she said.

* Bill Flynn, one of US's top authorities on document
authentication, added: "These documents do not appear to have
been the result of technology that was available in 1972 and 1973."

No. I've seen the contrary arguments, and they're about 95% bullshit. They are things like "well, you could scroll the paper up and type the 'th'" and "IBM Selectrics could print proportional type" (which is not true, but it is also irrelevant, because IBM none of the IBM Selectric fonts I've seen match the ones in the documents - but Windows' version of Times New Roman *does*).

I have really not seen any valid arguments supporting the authenticity of these documents. And without getting into any of the content of these documents, I am convinced, knowing what I do about typewriters of that era and subsequent computer typography, that those documents were NOT produced on a typewriter in 1972.

Okay - just for grins I did it myself - typed the whole memo in. All the line breaks are the same, but only when using Times New Roman or one of the related Roman fonts, like Nimbus Roman No9. But the memo does NOT use the same version of Times New Roman that's on my Windows 2000 machine.

So I don't know what machine it WAS produced on, but I remain
convinced it WASN'T produced on a typewriter in the early 1970's.

I don't think so. It might come down to this:

RNC
"if you don't investigate our fake documents,
we won't investigate your fake documents."

DNC
"if you don't investigate our fake documents,
we won't investigate your fake documents."

:-)

There are probably very few if any fake RNC documents.

However, it would appear that John Fraud Kerry has a lot of explaining to do.

At any rate, I know how I'm voting come November.

dxAce
A Navy and National Guard Veteran who will not be voting for John Fraud Kerry, or any other Democrat.

That pic was taken in 2001 when I first installed the system here, and the shot is from the end of the 100' W-E wire, looking west. That wire has now been extended another 100'. I need to take another pic which I'll do this Fall.

I just saw a CNN report on Blitzer that typewriters were capable of doing
all this in the time period. Still, consider what you just said! Would
someone typing a MEMO go through all the gyrations necessary to produce what
we've seen. Come on!

I think you have to be right at this point. There's just too much wrong
with these documents. Also, you're right about the selectric. The type
looks different on a Selectric II but it's not proportional.

Well, one might start with the after action reports he submitted for the medals
he received.

How much lead-in coax you using? My backyard is quite similar to yours. I
was going to put my wire on the neighbors chainlink fence which runs the
length of the yard, but the posts may work better.

>Very true. And very exasperating. Kerry should be absolutely
>*pounding* Bush.

He would be if the election was about issues.

I don't think Presidential elections are primarily about issues.

That's why I was disappointed during the Primaries that the
mainstream press adopted the line that Kerry was "electable" while
Dean and Clark were not. It's not that I preferred either candidate,
but national elections are determined by image and I thought (still
think) that either of those two could have done a better job running
an image-centered modern pit-bull campaign.

Kerry just looked like another DLC drone. I think a bit more highly
of him now than last Spring, but not much more.

>Bush has *nothing* to brag about, his record is one
>of dismal and abject failure. But I don't see Kerry doing an
>effective job at this.

In light of the demonstrated behavior of the mainstream press over
the last decade or so, I'm not sure anyone could be effective at
this.

>Actually, Kerry HAS been talking about a lot of Bush's failures - but
>it's not coming through in the media so well. The media is more
>interesting in these meaningless little squabbles.

They have their story - the Shrub is a steadfast leader, Kerry is a dull flip-flopper - and they're sticking to it.

><sigh> Yes. So much for "liberal media".

A neighbor attended the local Democratic caucus last Spring. She talked with an emigre from the XSSR who said, "At least in Russia everyone knew the press was lying to us."

I suspect this level of consciousness will eventually penetrate the American mind, though I doubt it will be in my lifetime.

--
Quote Of The Week: "We are here to affirm that when Americans stand up and speak their minds and say America can do better, that is not a challenge to patriotism; it is the heart and soul of patriotism."
-- John Kerry

Proof that KERRY submitted the after action report?

>No. I've seen the contrary arguments, and they're about 95% bullshit.

I think about 75% of the claims of the forgery advocates are
bullshit, too.

>They are things like "well, you could scroll the paper up and type the
>'th'" and "IBM Selectrics could print proportional type" (which is not
>true, but it is also irrelevant, because IBM none of the IBM Selectric
>fonts I've seen match the ones in the documents - but Windows' version
>of Times New Roman *does*).

Any claim based on examining documents on computer screens, or on
comparisons on TV that "look the same", or rely on documents printed
with the "default MS Word settings", or that two copies of a very
brief document have breaks between words in the same place, can be
safely ignored.

Determination of forgery is not that easy.

>I have really not seen any valid arguments supporting the authenticity
>of these documents.

The best possible argument is that they don't look like forgeries.
Most (though not all) of the reasons why they are forgeries are not
convincing. That leaves a small number of reasons to be taken
seriously.

The second best possible argument is that the evidence is not
sufficient. This is the argument that the CBS documents are the
results of numerous copying processes, so that a definitive
determination cannot be made. I don't think this is a strong

argument, but it's worth considering.

The third best possible argument is based in content. If the CBS documents were TANG records showing that the Shrub was really a trisexual mutant from one of the shabbier spirals of our galaxy, it would be easier to dismiss them as forgeries. In this case, the content contributes only marginally to what is pretty clearly already established about the Shrub's military history.

<And without getting into any of the content of
>these documents, I am convinced, knowing what I do about typewriters
>of that era and subsequent computer typography, that those documents
>were NOT produced on a typewriter in 1972.

There's this:

http://www.newsroom-l.net/blog/archives/000098.html

>>>I'm no Bush fan, by any means. I'd LOVE to see him retired.
>>>Rejected. Dumped. But the Truth is important. And the Truth is,
>>>these documents stink.
>>
>>I'm at least as suspicious of the claim that someone could print out
>>a document using Word and an unspecified printer and make it look
>>exactly the same as the documents in question. Though
>>standardization in equipment is stronger than it used to be,
>>printers (especially printers that have been heavily used) produce
>>small differences among themselves.

>Okay - just for grins I did it myself - typed the whole memo in. All
>the line breaks are the same, but only when using Times New Roman or
>one of the related Roman fonts, like Nimbus Roman No9. But the memo
>does NOT use the same version of Times New Roman that's on my Windows
>2000 machine.

I've worked on a number of projects in which I had to get reports to print in very precise formats and on preprinted forms. It used to be pretty difficult, but it's very easy now.

>So I don't know what machine it WAS produced on, but I remain
>convinced it WASN'T produced on a typewriter in the early 1970's.

I'm not convinced either way. I suspect that more will be revealed in the next few days.

I also don't care all that much, except to know, if it is a forgery, who did it?

--
Quote Of The Week: "We are here to affirm that when Americans stand up and speak their minds and say America can do better, that is not a challenge to patriotism; it is the heart and soul of patriotism."
-- John Kerry

I think my longest run of co-ax is about 85' or so.

Well, there are those who claim he was the only Officer around, so where did the reports come from?

I've never known a Engineman, or a Gunnersmate, etc. to be able to submit any kind of paperwork for an award, so the reports must have come from Kerry, submitted to someone else higher up... I guess they took his word for what happened.

For shortwave reception I have a T2FD (tilted, terminated folded
dipole) and a 400 foot end-fed wire. The two go into a phaser/matcher
box before being distributed to the 5 receivers.

Other antennas include a bicone for V/UHF, a colinear for V/UHF ham
use, and a full-size vertical dipole on a CB that almost never gets
use.

I love the usual FOX news "there are those who claim..." Claims don't mean
snot, okay?

Where's the PROOF that Kerry submitted the after action report?

>
> I've never known a Engineman, or a Gunnersmate, etc. to be able to submit
any
> kind of paperwork for an award, so the reports must have come from Kerry,
> submitted to someone else higher up...

Wrong. The above isn't PROOF. Look it up.

>I guess they took his word for what
> happened.

I guess that we're all being expected to take YOUR word for what happened,
which you're basing on someone else's WORD for what happened.

Proof, man. Proof????

705. 18% OF FED BUDGET IS FOR SECRET PROJECTS!

Newsgroup: rec.radio.shortwave
Date: 2004-09-10 22:58:03 UTC
From: radioman390@cs.com
Message-ID: <20040910185803.17257.00000384@mb-m25.news.cs.com>

Which Line Items are Marked "Shhh...Secret"?

How much of the Defense Department's budget is slated for secret stuff?

Analysts who have looked closely at the spending plan suggest it's just over $26 billion -- or 18 percent of the total.

The Center for Strategic and Budgetary Assessments reports that, when adjusted for inflation, the Fiscal Year 2005 budget includes more classified spending than any other defense budget since 1988.

By their analysis, classified funding has nearly doubled in real terms since 1995.

706. Re: '60 Minutes' Documents on Bush Might Be Fake

OK, show me the PROOF that someone besides Kerry submitted the original reports
to someone higher up than him. In general practice, it would have been Kerry or

some other Officer on scene. Do you have anything to prove it was not Kerry?

Well, show me proof that Kerry did NOT submit the initial reports for his awards.

Can you do so?

I'm just basing my conclusions upon my experiences.

That's good. I want them spending more, and more on tracking down assholes.

If you're a Liberal, just send in more, and stop bitching.

Kerry?

You're not getting this, are you? There have been claims made against the validity of Kerry's war record, a record that is the OFFICIAL record of John Kerry. It's not up to me or Kerry or anyone else to prove that those claims

aren't true. It's up to the accusers to PROVE THEIR CLAIMS. That's the way it works in the real world.

Now, politically, there's a case to be made that a bunch of lying malcontents who have repeatedly issued contradictory statements and proven lies can introduce enough DOUBT to harm Kerry's chances for election against a known Deserter like Bush.

But that's not PROOF.

Proof is where you prove beyond a reasonable doubt that Kerry wrote falsified accounts of his actions and those falsified accounts led to his awards.

That you do not have.

See the above. Kerry doesn't have to prove a damned thing.

711. Re: '60 Minutes' Documents on Bush Might Be Fake

I thought we were having a good discussion until I hit the part where you say
Bush was a known deserter.

Discussion over. I tried.

More's the pity. Guess you don't have a 'dog' in this race,
like kids who are draft age.

Interesting you might somehow refer in an off hand way to your kids as dogs.

Guess that would make you a bitch, would it not?

dxAce

714. Re: '60 Minutes' Documents on Bush Might Be Fake

>
> Discussion over. I tried.

Bush ignored orders and was not where he was supposed to be when he was
under orders to be there. Technically, he was a deserter.

And the discussion was going nowhere. You don't have proof that Kerry wrote
anything to direct his being awarded a medal. Since you don't seem to
understand either what proof is or where the burden of proof lies, it's
doubtful that this discussion is going to be fruitful for either of us.

715. Re: '60 Minutes' Documents on Bush Might Be Fake

A G5RV and a 200ft 'Frankenstein" Roof Wire. There is more information,
photos and diagrams of them on my web page. See my signalture for the
link.....

--
Respectfully,

Michael

Location: New Jersey
Primary Receiver: R-75 with full Kiwa mods
Antennas: G5RV, 200ft "Frankenstein" roof wire
Additional Radios: KA-1101,KA-1102,PL-550,
KA-989, Info-Mate 837, GE-SR III
Westinghouse H-104 (seven tube)
Web Site: http://md_dxing.tripod.com

At the risk of sounding -really- stupid, I just have to ask this. I've read
about using your window screen for an antenna; what about hooking directly
up to the chain link fence itself? Would it work? It's grounded, so maybe
not. I don't know, so I'm asking!

Will do. I've been planning on setting up a way to record some of these
things for uploading. Maybe this is the shove that I need to actually do it.

Then again, maybe it's Friday and I've had a rough week. ;)

It's funny - that's exactly what many in Australia said 2 years ago, but
look at us now, no code requirement at all! Don't be too quick to expect
FCC to maintain its ground when everyone else is changing....

Cheers

I have a sloping dipole from the tower to the fence corner, cut for
about 15MHZ.
There's a Alpha Delta Sloper, the shorter one, off the tower to a roof
vent. It needs to be replaced. It's in bad shape, almost 20 years old.
I have a short dipole in the attic as a back up.
A discone in the attic for one scanner, and two Scantennas for the
others.
A ringo ranger on top of the tower for railband and the occasional 2M
use.

Scanners:

Base:
RS PRO 2004, 2005, 2006
BC 9000XLT

Handhelds:

RS Pro 93
RS Pro 43
RS Pro 42
RS Pro 37
Yaesu VR500
Icom R2
Yupi 9000
Icom R10 (dead) but should soon be back up and running.

Depends upon if you are touting the information in those documents as
being true are not. If you are touting the contents of the documents as
truth, you should be verifying the validy of the documents.

250 ft random wire. Perverted-V formation. (Inverted-V with several irregular twists and turns due to adjacent trees and available supports).

The antenna seems to work fine from MW to 10m. I'll be adding another 140 ft to it later this month - in time for some MW dx-ing this winter.

Feeding a Sears-branded Frog-7, a Frog-A-Hundred, and a Drake R4c.

Well, I am a new SW-55 owner as well -- an incredible radio. I'll check this out, but I think this is going to fall into the realm of things we put up with
for the amount of stuff that's packed into these receivers.

I have not had a SONY portable yet, including SW-100 and 2010s, that had its oscillator smack on frequency across the range.

Hm, well, it'd be nice if the FCC were known for quick and efficient decisions. I am not sure which regulatory body makes the rules for Australia's amateur radio ops, but congrats on having such an apparently efficient one yourselves. The FCC here in America seems to be more concerned with pushing through technologies that would ultimately ruin the use of the HF spectrum altogether (BPL) than concern themselves with anything having to do with amateur radio. I have talked with many American hams about this subject, and even if we do not agree on what should be done about the code test, we all agree that the FCC will most likely be exceedingly slow to act on making a decision about the Code test either way. They have no real incentive to do so. Then again, why should American hams expect the FCC to make a quick decision if we can't stop fighting about it amongst ourselves?

I am thinking it will be at least 2-3 years before we hear from them about the Code test. If it's earlier, fine by me. I have already passed the damned thing anyway, and couldn't care less if hams that come after me need to pass it or not.

Cheers to you Down Under, and 73,

Jackie

I don't care if they're CBS or CNN or FOX or NPR. If they lied they lied.
CBS Stated that the documents had been reviewed by independent document
authorities. Go to cbsnews.com.

Now I'm used to lies and near lies from FOX but I've got to hold CBS to a
higher standard because it is supposed to be actual News. 60 Minutes is
even advertised as a New program. So if they didn't get those documents
reviewed by bona fide experts, then they LIED.

How about the Media, didn't they lie?

A Review of The Film Orwell Rolls In His Grave
By Ron Kaufman

"All over Oceania this morning there were irrepressible spontaneous
demonstrations when workers marched out of factories and offices and
paraded through the streets with banners voicing their gratitude to
Big Brother for the new, happy life which his wise leadership has
bestowed upon us.

"For the moment [Winston] had shut his ears to the remoter noises and
was listening to the stuff that streamed out of the telescreen. It
appeared that there had even been demonstrations to thank Big Brother
for raising the chocolate ration to twenty grams a week. And only

yesterday, he reflected, it had been announced that the ration was to be reduced to twenty grams a week. Was it possible that they could swallow that, after only twenty-four hours? Yes, they swallowed it . . . with the stupidity of an animal."
-- from Nineteen Eighty-Four by George Orwell

(snip)

Orwell Rolls In His Grave is a well done film that presents the Orwellian notions of "doublespeak," "big brother" and "the endless war" in a contemporary context. Ironically, its message of corporate media control and the loss of free speech in America will never get any exposure. The film is critical of the very companies it needs for effective distribution. Politics and conspiracy theories aside, the film makes a strong case against the consolidation of media companies. In the end, the film polarizes the United States into "us" versus "them" -- this being "the general public" versus "the corporate elite." The public may eventually learn of this viewpoint, but one thing is certain. It will never be reported in the media.

As Mark Crispin Miller explains in the film, individuals may get headlines and specific companies may be investigated in newspapers and TV, but the system will never be scrutinized. Big media will never admit that it has influence over our world and corporations may allow airtime for parts of the truth, but the whole truth will never get broadcast.

"Sex, Lies and Newsreels"

You want to know where the Fox is? Just follow the money... ;)

"rule
number one of investigative reporting is "follow the money" -- but the
sheiks' piggy banks were effectively off-limits to the US agents during the
Bush years."

SEPTEMBER 11: WHAT YOU "OUGHT NOT TO KNOW"
DOCUMENT 199-I AND THE FBI'S WORDS TO CHILL THE SOUL

Thursday, September 9, 2004
by Greg Palast

On November 9, 2001, when you could still choke on the dust in the air
near Ground Zero, BBC Television received a call in London from a
top-level US intelligence agent. He was not happy. Shortly after George W.
Bush took office, he told us reluctantly, the CIA, the Defense
Intelligence Agency (DIA) and the FBI, "were told to back off the Saudis."

We knew that. In the newsroom, we had a document already in hand,
marked, "SECRET" across the top and "199-I" - meaning this was a national
security matter.

The secret memo released agents to hunt down two member of the bin
Laden family operating a "suspected terrorist organization" in the USA. It
was dated September 13, 2001 -- two days too late for too many. What
the memo indicates, corroborated by other sources, was that the agents
had long wanted to question these characters ... but could not until
after the attack. By that time, these bin Laden birds had flown their
American nest.

Back to the high-level agent. I pressed him to tell me exactly which
investigations were spiked. None of this interview dance was easy,
requiring switching to untraceable phones. Ultimately, the insider said,
"Khan Labs." At the time, our intelligence agencies were on the trail of
Pakistan's Dr. Strangelove, A.Q. Khan, who built Pakistan's bomb and was
selling its secrets to the Libyans. But once Bush and Condoleeza Rice's
team took over, the source told us, agents were forced to let a hot
trail go cold. Specifically, there were limits on tracing the Saudi money
behind this "Islamic bomb."

Then we made another call, this time to an arms dealer in the Mideast.
He confirmed that his partner attended a meeting in 1995 at the 5-star

Hotel Royale Monceau in Paris where, allegedly, Saudi billionaires agreed to fund Al Qaeda fanatics. We understood it to be protection money, not really a sign of support for their attacks. Nevertheless, rule number one of investigative reporting is "follow the money" -- but the sheiks' piggy banks were effectively off-limits to the US agents during the Bush years. One of the men in the posh hotel's meeting of vipers happens to have been a Bush family business associate.

Before you jump to the wrong conclusion, let me tell you that we found no evidence -- none, zero, no kidding -- that George Bush knew about Al Qaeda's plan to attack on September 11. Indeed, the grim joke at BBC is that anyone accusing George Bush of knowing anything at all must have solid evidence. This is not a story of what George Bush knew but rather of his very-unfunny ignorance. And it was not stupidity, but policy: no asking Saudis uncomfortable questions about their paying off roving packs of killers, especially when those Saudis are so generous to Bush family businesses.

Yes, Bill Clinton was also a bit too tender towards the oil men of Arabia. But this you should know. In his last year in office, Clinton sent two delegations to the Gulf to suggest that the Royal family crack down on "charitable donations" from their kingdom to the guys who blew up our embassies.

But when a failed Texas oil man took over the White House in January 2001, demands on the Saudis to cut off terror funding simply stopped.

And what about the bin Laden "suspected terrorist organization"? Called the World Assembly of Muslim Youth, the group sponsors soccer teams and summer camps in Florida. BBC obtained a video of one camp activity, a speech exhorting kids on the heroism of suicide bombings and hostage takings. While WAMY draws membership with wholesome activities, it has also acted as a cover or front, say the Dutch, Indian and Bosnian governments, for the recruitment of jihadi killers.

Certainly, it was worth asking the bin Laden boys a few questions. But the FBI agents couldn't, until it was too late.

In November 2001, when BBC ran the report on the spike of investigations of Saudi funding of terror in November 2001, the Bush defenders whom we'd invited to respond on air dismissed the concerns of lower level FBI agents who'd passed over the WAMY documents. No action was taken on the group headed by the bin Ladens.

Then, in May this year, fifty FBI agents surrounded, invaded and sealed off WAMY's Virginia office. It was like a bad scene out of the 'Untouchables.' The raid took place three years after our report and long after the bin Ladens had waved bye-bye, it is not surprising that the feds seized mostly empty files and a lot of soccer balls.

Why now this belated move on the bin Laden's former operation? Why not right after the September 11 attack? This year's FBI raid occurred just days after an Islamist terror assault in Riyadh, Saudi Arabia.

Apparently, messin' with the oil sheiks gets this Administration's attention. Falling towers in New York are only for Republican convention photo ops.

The 199-I memo was passed to BBC television by the sleuths at the National Security News Service in Washington. We authenticated it, added in our own sleuthing, then gave the FBI its say, expecting the usual, "It's baloney, a fake." But we didn't get the usual response. Rather, FBI headquarters said, "There are lots of things the intelligence community knows and other people ought not to know."

Ought not to know?

What else ought we not to know, Mr. President? And when are we supposed to forget it?

I don't think "60 Minutes" qualifies as a 527, somehow.

The plot is thickening. IBM says yes they DID have proportional fonts
as early as 1944, Rather produced a guard memo released by the WH
which showed the same font and typesetting, and most notably, neither
the WH nor the GOP or rival networks are saying the documents are
faked.

This may be the biggest story of the campaign, and right now I have no
idea how it's going to play out.

"It struck me as I was speaking to people in Bangor, Maine,
that this president sees America as we think about a 10-year-old
child," -- Andrew Card, ranking member of the West Wing

This confirms that all our right wing folks who made all kinds of
individualistic and anti-government grunts and honks during the 90s really
just want a government that is a cross between Jehovah and daddy.

By the way, I think it's worth pointing out that while I think the
physical documents are phony, it's VERY interesting that the White
House saw them and released them and didn't claim that they weren't
true - in fact, they claimed that they supported Bush's story. That

would seem to indicate that the *substance* of the documents - the
content - was at least plausible. They read the documents and
didn't say "Hey... wait a minute, these documents are bogus!"
Instead, they looked at them and said, "Yeah, sounds about right."

Well, I monitored 6905 from 0350 to 0431 UTC and didn't hear it. I did hear what I believe to be some sort of voice transmission, but it was much too faint to make out any words or even guess at the language. Probably has nothing to do with last night's transmission. Nuts.

No doubt about it. Not only the war was unnecessary but it was also
strategically stupid. Now the troops are thinly deployed, facing an
ever increasing resistance and anti-American feelings around the world
have multiplied. Pyrrhic victory?

He lied to cover his ass for ingoring warnings
> before 9/11, lied to get into Iraq, he's still lying rather than admit screw

No, not at all.

>
>Determination of forgery is not that easy.

True. To stand up in court, there would have to be more rigorous
examination. And I assume that will be done and the results will be
published. In the meantime, I use my own eyes, my knowledge of
printing and my experience with typewriters and typography, and I am
pretty sure that the documents are fakes.

>
>
>>I have really not seen any valid arguments supporting the authenticity

>
>The best possible argument is that they don't look like forgeries.

Huh? Jeeze... What does a forgery "look like"? By definition the
whole purpose of forging a document is to make it look like the real
thing. And anyway, for all the reasons that have been explained ad
nauseam, these docs DO look like forgeries. They look like pretty
amateur ones, at that.

>Most (though not all) of the reasons why they are forgeries are not
>convincing. That leaves a small number of reasons to be taken
>seriously.

Proportional fonts, superscript "th", the apostrophes and kerned
characters are plenty. Add to that the testimony from the family that
the man who supposedly kept these files didn't actually keep files
like this... And with more rigorous examination, I suspect the truth
will be proved.

>

Why are they the results of numerous copying processes? Where are the
originals? They look like they've been faxed to me. Why is that?

>

The content sems to be fine - the White House looked at the docs and
said "Yeah, that sounds about right." They didn't deny the docs and
they even said they supported Bush's story.

This site correctly points out that the font in the docs is not Times New Roman (at least - it's not the same as the version of TNR I have on my win2000 machine...) And it asserts that because the IBM Executive had proportionally spaced characters, the documents could have been produced on an IBM Executive.

Problem is, the Executives didn't use a ball - they used a standard hammer and moving platen arrangement, and as such didn't do alternative fonts. You got one font with them. And I don't know for sure, but I'll bet it was either Courier or Elite. But the documents are not in either Courier or Elite, so they were not produced on an IBM Executive, so all the people who like to point to that proportionally-spaced typewriter as a possibility can give that up.

Exactly. That is the Big Question. That, and of course, CBS News
(and Dan Rather in particular) credibility is on the line. It may not
make much difference to the election, but it is serious stuff to CBS.

> > your attic....)?
> >
> > Steve

Mine defines "homemade", but worked out well for me:

I found a spool of 14 gauge stranded with insulation that precisely matches the color of the ceilings in our home. Using white electrical staples, I mounted it at the wall-to ceiling point, and ran it straight through the family room, down a long hallway, and into my shack, across the ceiling there, and terminating about 3' above my receiver, where I joined it to coax and the coax to an antenna connector for input. It is 55' long, and mounted 7.5 feet above grade. I used this alone for about a month, and was very pleased with the results.

In an effort to "notch it up a bit" (don't all antenna experimenters?) I ran an additional 55' of the wire around the ceiling/wall juncture of my shack. It goes around exactly 1 and 1/4 times, (also 7.5 feet up) and again drops to 3' above the receiver, where it joins the coax at the same point as the original wire. I now had a 110' longwire antenna, center-tapped.

I read here a few months back where a poster remarked that doubling a 50' random wire to 100' would increase signal strength by only 3dB. That's basically what I found, too. There is a slight edge to signal strength since I went to 110', but only slight. The 55' alone gave me good results. Receiver is an Icom R-75, by the way.

I like the relative "invisibility" of teh way I did it. 110' of antenna, and no one even notices it unless it's pointed out to them. Even my wife didn't notice it for more than 6 weeks after I installed it, and had no problem with it when she did notice it ("Gee,you can barely see it.")

Comments/suggestions welcome - I'm always trying to learn more.

Tony

That's what the Bush people want you to believe. Do your homework and
you'll find out that the font did exist back then, including the 'th'
symbol.

That's what CBS wants you to believe. Do your homework and you'll find there are other issues with authenticity. BTW, the "Bush people" who actually work for Bush have said next to nothing about this, unless one considers the Washington Post to be Bush people.

It's an interesting point. "Nuanced" is the current vernacular.
Essentially, the Bush White House is inclined to accept it, because they
think the content to be essentially correct. Which means that, in a round
about way, Bush is admitting he disobeyed direct orders which hardly puts
him in for a honorable discharge.

My guess is that the White House doesn't think the public is bright enough
to see that kind of admission for what it is.

I agree with you on that. There's something really odd going on here. Consider too that the White House literally made almost no comment at all on the documents. One would have thought that there would have been some comment on the content at least.

Not for long. This time of year (at least up here) 15 and 17 MHz get very sensitive to the space weather and often go away not long after sunset. Friday, at 05:00 or thereabouts, there wasn't anything from the south Pacific but RNZI at 11820 and RA's Grandstand on 9660. The 15 MHz signals were fine on Wednesday. What a difference a couple days can make.

>17795 is supposed to be toward North America and 17715 is to Asia but it

>America experience that?

What time? At 00:00, 17795 has been about S3, (even with a new antenna wire and treating my R-1000's antenna attenuator switch with Stabilant/Tweek contact enhancer) and 17715 was (under S1) in the mud.

What's his call sign. I know he's a ham, because I've watched TBN here
while channel surfing and I got interested in watching a puff piece on
a (then) new geosync satellite (that they were going to lease a big chunk
of). He went into the history of TBN, which started from in interest in
radio.

There's a longer version?! It already set a record for a press release.
I gather somebody wants to take the frequencies away. Jeez, talk about
pointless self-importance. You could get even better emergency communications
by putting up more cell phone towers and not have to suffer through the
press release.

Look for a ``Car-jackers Handle Emergency Transportation'' release from
civil rights organizatons.

Does anyone have any information about the node status of the IRLP
station on Cayman? www.irlp.net
I have checked the listings but the station is not listed anymore.
I will be on island next month and will bring VHF gear and hope to use
the irlp when I get there. 73.

Here is a link to the Cayman amateur radio club in Cayman Islands.

> what would be your recommendations

For BC DX use, definitely the 2010. SSB clarification may, however, not be sufficient to you because of its 100 Hz steps and inavailability of fine tuning; the 7600GR with its analog fine tuning is at an advantage there. Do note that these receivers are very different in size, the 2010 is not extremely compact by today's standards while it's rather easy to lug around the 7600GR almost anywhere. Something with performance equal to or better than the former (plus fine tuning) in the format of the latter would be nice. (It would be possible, as the ICF-SW07 has shown.)

Since I have never tried an un-modified one I really do not have a
direct comparison on the sensitivity increase. I do, however, know
that the sensitivity is very good on this one. As far as overloading
it is not a big problem although it is somewhat noticeable. The
modified filters (again no direct comparison) seem to work well on
shutting out adjacent stations.

> 66' x 15' "L" shaped copper wire

To answer your question, YES, it is very possible that the tv antenna is affecting your Antron antenna. The signal could be reflecting off the tv antenna at different points which will change the radiation pattern. It is also possible that the tv antenna is affected, but if so, probably as a positive as certain tv signals can reflect off the other antenna onto the tv antenna. But if you have a ghost problem with tv reception, it could be because of the two antennas being close together.

Several years ago I lived in Fair Oaks, California, and had a large Channel Master antenna mounted on a 40-ft mast with rotor. The neighbor ACROSS THE STREET noticed their reception would go in and out, and one day noticed my antenna turning as their signal went in and out.

Poor SW sensitivity in general or just poor off of the whip ??? I thought
that it was a good performer when used with an external.

Michael

Does anyone have a good source for an online (international) time zone converter that permits the user to enter a given time in one zone and the converter calulates the time in another zone?

I am already familiar with these sites:

www.timetemperature.com
www.worldtimeserver.com

Thanks

Shortwave Log installed easily on my WIN XP computer. It requires
installation of a few extra files and runs great.

780. U.S. Navy IG Says Kerry's Medals Proper

Newsgroup: rec.radio.shortwave
Date: 2004-09-18 21:59:38 UTC
From: Dwight Stewart <stewartx@NOearthlinkSPAM.net>
Message-ID: <ed23d.5990$n16.3387@newsread2.news.atl.earthlink.net>
Source record: 828
Cross-posted to: alt.politics.democrats,alt.politics.republicans,rec.radio.shortwave

Following recent Republican efforts to discredit Kerry's military service medals, the ultra conservative group Judicial Watch, best known for nuisance lawsuits against Democrats, asked the Navy to open an investigation into the matter.

In response to that request, Navy Inspector General Vice Admiral Ronald A. Route conducted a review of Kerry's Vietnam-era military service awards and concluded Friday that procedures were properly followed in the approval of Sen. John Kerry's Silver Star, Bronze Star and three Purple Heart medals, according to an internal memo written to Navy Secretary Gordon England.

"Our examination found that existing documentation regarding the Silver Star, Bronze Star, and Purple Heart medals indicates the awards approval process was properly followed," Route wrote in the memo. "In particular, the senior officers who awarded the medals were properly delegated authority to do so. In addition, we found that they correctly followed the procedures in place at the time for approving these awards."

"Conducting any additional review regarding events that took place over 30 years ago would not be productive," Route continued. "The passage of time would make reconstruction of the facts and circumstances unreliable, and would not allow the information gathered to be considered in the context of the time in which the events took place."

For more information on this story, see;

http://abcnews.go.com/wire/Politics/ap20040917_1894.html

Those of us who earlier defended Kerry's medals will now certainly watch to see if those Republicans who were so quick to openly belittle Kerry's medals in recent weeks will be as quick to openly admit their mistake, or will they now choose to attack the Navy Inspector General's review instead.

Hi,

I mostly do MW listenign/dx'ing. I would be interested in feedback on how well the R75 performs on MW. I know there are Kiwa mods to increase the MW sensitivity. Are these really necessary? Is the difference that dramatic?

Well anyway, I would be interested in any user input on the R75.

Thank you
Russ K3Pi

Hiya... I have an R-75 and I like it quite a bit, but not for MW. It is sensitive enough and works just fine on most MW, but if you want to DX a weak MW signal I find that the R-75 is too noisy. Way too much snap crackle and pop. I use a GE SR-III for MW DX'ing. Because it is analog it is quite as can be. The draw back is that the tuner dial is not accurate at all. I've read/heard that the CC Radio Plus is better then the GE-SR series because it has an accurate tuner. It may not be as sensitive as the GE-SR III or as quite, but it is probably one of the best MW radios available. I also know that there are a lot of people that use old analog tuning automobile radios as their MW DX'ing radio but I wouldn't know about which ones to use or how to get them...

So... For MW, you have way better choices then the R-75. The R-75 shines for sw utility and sw DX'ing using ssb and ECSS tuning, but it isn't regarded as a MW radio.

Hope that helps...

TAR can really mess up your hybrid/analog radio gear.
Stiffened/stuck parts and/or contact problems are common,
and it is a bitch to clean up the radios back to working order.
YES , a smoke free environment is a must for top performance.

Thanks, I'll give it a try. I was a little hesitant due to all the
talk about the ".net" and other aspects that seemed like possible
trouble. Hard enough to keep these machines stable without adding to
the problem with software that might be risky.

<Later>

Okay, I installed it and no problems. Now I have to learn how to use
it (Smile).

At 23:50 I'm getting a het. Who knows what it is from though. Now way for
me to know if it is WRM. I thought I might have heard something
approximating music for a few seconds but it was bordering between static
and imagination.

The Radio Netherlands review of this model pretty much says it all
(http://www.rnw.nl/realradio/html/icf-sw7600gr.html).

It's the best radio in it's class, in my opinion. Very sensitive, with
a good sync detector that's far more useful than I expected it to be.
It has attenuation and a fine tuning wheel that works very nicely when
listening in SSB.

Go for it! It's a great value.

I assume you're looking for a desktop radio.

I think you can do better than an R75 for MW.

Get a Drake R8B if you can afford it. It's got an excellent synch detector. If price is an issue, the Palstar R30 is supposed to be a superb (albeit no bells or whistles) MW radio for it's price, which I believe is cheaper than an R75.

Excluding mega-buck military or maritime radios, the legendary Drake R7A is, in my opinion, the BEST solid-state MW DX radio ever made. If you can find a used one in good condition, grab it. I have one, and will NEVER part with it.

>
>Thank You

TCXO = Temperature Compensated Crystal Oscillator

It is common shorthand to refer to "crystal" as "xtal" or simply "X"
when used in an acronym.
The device will (usually) operate the xtal element at an elevated
temperature, say 100 degrees F or so, plus or minus a few tenths of a
degree. This stabilizes the crystal frequency to a feww ppm or less.

cheers

We're Not fighting terrorists in Iraq;
It's Mostly local guys, come down, do Jihad,
go back home

What The U.S. *Don't* want is what's just over the hill;
~1,000,000 Iranian troops,
who
~Thanks~ to Chalabi, who fed the White House Bogus Intelligence
for the benefit of
Iran
are ready to swoop in
and
make whats left of Iraq into
Iran " Light"
- Why *Else* spend so much time into drawing the U.S. into
invading Iraq
in a
Bogus search for WMD

??
Vote for George The Chump
Four More Years . . . .

I had both the R-7A and the HQ-180 at the same time. The R&A is superb, but its audio made it hard to ID stations, but it could sure dig out the DX; it is still regarded as the best radio of any type for the "tropical bands" 2-4 MHz.

The HQ-180 had superb audio, and DX "dig" ability. But not great on frequency readout.

BTW the Skanti 5000/5001 is the equal of the R7 in performance. It's what I use now for AM DXing.

The R-75 is SO sensitive that the MW area has something to attenuate MW
signals;
So you don't get overloaded from local statins
However;
R-75 does Work pretty good with an external antenna.

IF you're just after MW, Suggest getting
something else & an external / Justice / Loop antenna

Dan / NYC

Why is the same, tired old overwrought "interpretation " of a
murderous terrorist "well-worth reading"? Does it really take any
skill or intelligence to start with a preconception---find some way,
any way, to blame the West-- and twist one's so-called "facts" to meet
that preconception? The concept of Bin Laden, presumably bereft of
his own free will, as "creation" is as ludicrous as the inability of
those who float such an idea to make any moral judgment---except, of
course, in one instance--when that judgment can be anti-American.

Because the 2 antennas are of opposite polarity- they will be essentially
invisible to each other- typical isolation runs in the 20-30dB range- making
interaction unnoticeable.

someone (not me) has started a yahoo group for owners of these two
receivers. as I own one of each I would like to see lots of members !

so go to www.groups.yahoo.com and search for drake sw-4a and join us !

want to know what rare is !

the drake SW-4 had only 600 produced and they were all "hand assembled" at
about a rate of 10 per day
now thats RARE !!!!!!!!

I get a BIG laugh when someone calls a sony or panasonic radio with 40,000
produced a "rare" radio

HA HA HA !!!!

The modifications must be effective. The 909, on it's whip antenna, is not exactly deaf but rather hard of hearing. The filters are pretty poor. It performs well on an external antenna though but, of course, this doesn't do anything for the filters.

> course, in one instance--when that judgment can be anti-American.

My favorite part was this:

"Bin Laden was at the center of one of the most important events of
the 20th century: The fall of the Soviet Union. Political pundits
like to credit Reagan and the senior Bush for the collapse of that
regime, but out in front of them, in the mountains of Afghanistan,
was Osama bin Laden and al Qaeda, the sharp end of our sword, who
did their job very well. Today, the United States faces this group
and its leader, armed with their well-learned and America-taught
lessons: How to kill massively and how to annihilate a superpower."

I'm going to print that out a few dozen times on my printer. Then I'm going
to run those papers through the shredder, after which I'm going to sprinkle
them on my pumpkin patch. You guys think you've seen big pumpkins before?
Step back...mine are gonna be freaking HUGE!

823. Any SWL residing in Pakistan?

Hi,

I am new to Shortwave listening, though, have obessesion for radios
since childhood.

Is there any one in this group living in Pakistan. I am from Karachi
and
planning to buy a shortwave receiver soon. Before actually getting it
I want to make sure how well they work in this part of the world. Plus
do they catch hams
and other channels here in Pakistan.

Thanking you in anticipation and wish you all good listening.

Regards,

Riz Abbasi

I'm not 100% certain about this, but as I recall the MARS callsigns starting withh NN are Navy/Marine stations, those starting with AA are Army, and those srarting with AF are AirForce.

Or the R7, it's the same radio. (Though R7A's always seem to command a higher price). Hanging on to mine also.

I have the 8, 6, 4, 3 and 2.3 filters in mine.

I'm not sure if there is anyone on this list from Pakistan, however, you might want to contact Alokesh Gupta (alokeshgupta AT vsnl.net) of the dx_india group.

I'm sure he'll be able to answer all of your questions regarding reception in your area.

Enjoy.

As Dale says, due to the cross-polarization (and the fact that the TV antenna is below the Antron) I doubt they're seriously affecting each other's operation.

If you had a horizontally-polarized antenna 6" above the TV antenna (for example, a 10-meter Yagi) it would be a very different story.

The only Star Trek solution I see is to get aboard a spaceship and get
the hell out of here--fast. Other than that there may be a revolution
of some sort to bring back evolution back into place. The dinosaurs
don't want to evolve but we have to push them a little bit...

Do you see Star Trek in this picture? It's one of those dots...

Your gullible Mike. Trying to blame all the problems in the Middle East on America is a cheap shot and its a lot more complex than a simplified biased story trying to justify Bin L's position. If all those countries were interested in peace they would bend a little and compromise. The Palestinian /Israel conflict is a prime example of no compromise. I just love how you guys like to oversimplefy the problems in the Middle East.

Their work is thankless, and a little overblown press once and awhile is
about as bad as that gets. What's really aggravating, is to hear the vermin
crawl out of their holes and whistle and otherwise deliberately disrupt
emergency communications on the HWN and Maritime Mobile Net. Some Amateur
operators in spanish and asian languages (one group allegedly operates
within Florida) deliberately acts up on 14323 whenever the net is active on
14325.

Here's a suggestion, hit a swap meet (or ebay) and get 1) rf signal
generator and 2) a (digital) frequency counter. When you're lost on
the SR-III, (turn on and) adjust the generator (with the counter hooked
up and working) until you get a heterodyne and then just read out the
frequency.

The same thing could be done with a second receiver with a digital readout
using the local oscillator, remembering to compensate for the IF offset.
I can do this with my R-1000 because is leaks a signal 455 kHz above
the received frequency. (It's not the LO, as the R-1000 first IF is
45.something MHz. It's the signal used to drive the digital readout.
The frequency synthesizer board in the R-1000 is pretty baroque).

As far as the applications I know of,
time sensitive applications in Israel,
use GPS receivers.

I've seen various LW time signal
coverage maps online and none of them would
reach Israel. Once I saw that companies were
selling 'international'versions of so-called
"atomic clocks" I started looking
at coverage area myself....

The same way they run their local TV stations. I read that the local
station's manager is proud of the fact that they don't even have a camera
or studio. What a waste of MHz.

I keep reading this about fluorescent lights and yes, some are noisy but most are no problem. I have a four foot, two tube fluorescent in my shack. No noise from it at all. I have four, four foot, two tube fixtures in the garage. No problem with them either.

I'm looking to buy one online, since there don't seem to be any purveyors in my area. I'd like to hear some recommendations for brands. I've found several styles, but I'm hoping to find one that's easiest to read quickly. (Some look like they'll take a couple of seconds of deciphering.) I'm thinking of going digital for that reason, but I have to admit I kind of like the way the analog clocks look in the shack photos that I've been seeing lately. Does anyone out there prefer a particular brand or face-style over any other? Or is this just a case of "I'll get used to it over time"? That's what I suspect, but what with all of the years of experience in here, I'd be a fool not to avail myself of some of it. ;)

843. Radio Japan very weak this morning on 9535

Radio Japan very weak this morning on 9535 for the 17 to 18 hrs
broadcast. I see we have a solar flare in progress. Normally they put in
a very strong signal and a some what weaker one on 11970.

MFJ is the most common brand, and the quality of their clocks ranges
from so-so to excellent, depending on what you want to pay. I bought
mine on EBay - cheap, and no problems at all after 2 years.

Tony

>Could the TV antenna be affecting my radiation pattern?

RF can get into cables and equipment, and if there are nonlinear elements
like diodes or transistors or a corroded connection, they can act upon
the transmitted signals to create new signals and harmonics.

One time I was having huge problems with medium wave broadcast "intermod",
where all over the dial there were mixtures of two or more of the local
AM stations. It turned out to be a corroded connection on the FM antenna
for the hi=fi tuner. So a system designed to receive 100 MHz signals
was picking up 1 MHz signals, and spewing them all over 3-30 MHz range
to a receiver that had no connection with the source.

Figure that any long piece of metal within 100 feet of your transmitting
antenna is going to pick up (and reradiate) your signal, affecting
your transmission. And if it's not a very good piece of metal it can
do strange things. Roof flashing, railings, masts, guy wires ...

Also, if you have a TV signal booster on the antenna, it's getting
hammered with quite a bit of signal.

go digital. i got 2 here from Universal Radio.
1- local, 24 hour time.
2- UTC, 24 hour time.
both atomic set, or what ever its called. really
cool. can read either from across the room. both
were under $30 each. real easy to read. check out
Universal Radio. or, google lacrosse. about the same
price anywhere. i bought from Universal as support
for my favorite radio dealer. they both have day, date,
and inside temp. believe rat shack has them also...

Your premise is not even logical. We are there to setup a democratic
government. Everyone there knows we will leave once the country
stabilizes so why would the insurgents just stir up trouble to keep us
there? The answer is arabs from other nations in the area that do not
want Iraq to have a democratic government are fighting us in Iraq not
the local people. They are called terrorists if you have not figured it
out yet.

Once the old ballast type have started up into a good bulb you will
probably not hear much noise from a fluorescent but the newer high
efficiency switching type can make plenty of noise.

I bought a La Crosse technology model WS-8007U from Radio shack for
about $24. I have the clock set to UTC time so it shows me the UTC date
and day. This unit also has moon phase and room temperature. I have
found all these displays handy at times. This clock synchronizes to WWVB
and I can only recall one time for a few days that it did not receive a
good signal from WWVB in southern California. It is a shelf model that
can also hang on the wall if you prefer and it has a BIG DISPLAY easily
seen from across the room.

(Received this from the station)

Following our highly successful first transmission via the 9290kHz Latvia outlet, we will be carrying out another transmission during October from Riga and are also currently in talks with another provider in the USA to relay our service.

We are also negotiating additional funding so that we can launch E R I across Europe from early 2005 on Sky Digital.

We have now moved our website to www.europaradiointernational.co.uk which enables gives us a lot more flexibility including webstreaming which should come on-line soon.

Finally we have made the decision NOT to seek an Medium Wave outlet in Europe at this time due to the ludicrous fees being charged by the vast majority of airtime providers for what is frankly becoming an outmoded means of transmission and will be concentrating our efforts on getting the Sky Digital service up and running.

I use a Radio Shack 63-959 travel clock.About $14.95. It can be set for 12 or 24 hour time, shows temp, date and day of the week and can be set for alarm. Hard shell case flips down to make a base. Runs on one AAA battery. Nothing fancy, but it works. Just set it for UTC.

Pete

I've read and heard both sides of the argument about
antenna tuners being great, or not helping at all and are
a waste of money. I've been told they are only for shortwave
transmitting, and I've been told they work well to improve shortwave
reception on faint signals. I've had it suggested to me that I
get a pre-selector instead.

I can't find anyone who actually experimented with either a tuner or pre-selector... at least
none of what I've read and heard was stated as "experience"... rather
it seemed like theory or conjecture.

Does anyone here actually use a tuner or pre-selector for shortwave listening, and if so,
with what results? I'm looking at the MFJ-959C antenna tuner at
http://www.universal-radio.com/catalog/preamps/2574.html
Note that it says "for receive only".

Sanjaya,

I doubt that anyone else's opinion about a tuner selling new for $15 is worth much to you. Go ahead and try the thing for Pete's sake! Expect to get $15 worth of product. Or, spend 5 times that much for MFJ equipment that adds a noise-feed which a tuner can then be adjusted to null the noise, and the tuner is then configured to make your antenna resonant for the given frequency. That will definitely improve reception. So will a preselector, and so will a step-attenuator, once you learn to use it. But for $15, what have you got to lose? It might work, you can let us know if you try it.

Best regards,

Jack

Thanks Jack. But I think you looked at the price of the power supply,
which is $14.95
The tuner is $89.95

I have written a .NET application that will display various times around the world, does anyone use the computer near their radio
and would like to have something like this?

If so what features would people expect? Let me know and I will try to put something together.

A wile I baught this nice BIG tight LED $9.99 clock in Raindew, I then looked up the IC data.
All I had to do is ground 1 pin and it went to 24 Hr mode. Trick is the clock must be a full 4 digit display (not a 3-1/2).
Many IC's will do this.

I picked up a regular clock for two or three dollars in a yard sale and
cut twelve small squares of freezer tape to stick by the other numbers.
Numbered them from 13 to 23 plus 00. Works great as long as I put one
"C" battery in it about once a year.

I've tried a variety of antenna tuners and preselectors.

If you're looking for more knobs to twiddle, they're great.

But I prefer impedance matching transformers.

No knobs to twiddle, no need for batteries or an AC adapter, and they
seem to work at least as well with my radios and antennas.

The IG said "the awards approval process was properly followed." That process includes an investigation into the facts to justify such awards.

The awards process includes an investigation or review of the facts and circumstances to justify an award. The Admiral made that very clear when he said an "additional review" today would not be productive. He also made it very clear in that same paragraph that any review included the "facts and circumstances" of the events. Those who did review the "facts and circumstances" thirty years ago found that Kerry did deserve those medals. That should be more than enough to satisfy all but the most fanatical.

I use an old Grove MiniTun3. It has all of 2 knobs one to select a
frequency range the other to tune for best signal. It woorks well from
500 kHz to 30 mHz. I find it most usefull on lower frequencies in
particular below 4 mHz. It use it with my 135 foot longwire that goes to
my ICOM and Drake receivers. It is not a cure all but helps

> a waste of money.

IMHO..... for receive only I would not bother with one. If you want the maximum signal transfer then a tuner will make the receiver see the proper impedence... therefore more signal. Also more noise. Signal/noise ratio is what matters for a receiver. I very rarely run my receivers without the RF gain reduced 25-40% depending on noise.

In the last ARRL 160 meter CW contest I operated in....2001... I did not have a beverage or any "special receive" antenna. Turns out a 5 element Force12 Yagi for the 10 meter band @ 50 feet was the best.....lowest signal/noise ratio....for most of the 1100 or so stations I worked. What was the impedence mismatch? Beats me.... but it worked .

Considering the radios you own, the only thing you will gain is the right
to say you have a Drake.

Yes, there is, but it takes some special equipment. The best bet is to have the proper toroid, wind it according to the formula and you shouldn't have any problem.

I have a 66 foot multiband dipole under my eves. The only way one can see it is to get within about two feet of the house and look under there. If someone from your homeowners association spots it and complains, make a deal with them. They let you keep the antenna or you file charges for trespassing.

> Perhaps you could borrow one of the MFJ antenna analyzers from a ham friend- terminate the balun in a 450 Ohm (9:1) or 510 Ohm (10:1) resistor and tune across HF bands - you should see a low VSWR. Note that toroidal transformers have quite a narrow bandwidth over which they are actually 9:1. Binocular cores will increase this BW over 10X.

Thanks...
IMHO, Think we should invade no one; Big Weapon Systems are NOT the way to
fight smalll bands of techno savvy terrorists,
who are living in The West, or being supplied with funds from Saudi Arabia,
Syria or Iran;

In the end, Invading Iraq on the basis of Bogus intelligence has helped no one
but Iran, Syria
And Osama Bin Laden...

This is true. But if the documents are forged, then they cannot be
used to support the charges in them.

> Nobody can show the documents are forged.

Actually, several people have suggest that there was no typewriter
that could do propotional spacing (I wonder about the MagCard though.)
And that no typewriter had a superscript feature that would cause the
superscript letters to be smaller in size than the other letters in
the document.

I don't like W., but this is not going to help.

I would need more information from you on the model. I would get a
report on the fixture before I bought it. Basically it comes down to how
the current for the bulb is regulated in the amount of EMI generated.
Some RFI is generated by the bulb plasma when conditions are not good
for the bulb. You might want to just buy one unit and test it with a
radio. The problem is that things may change as the fixture ages. The
unit unit might not be a problem until later in its life.

It sounds like someone playing Pong. 0401 UTC. It's got another strange swishing sound in it, at least to my receiver. It's also audible either side of that frequency.

New Zealand has been very strong this evening until this time 4:00 UTC
and I expect they should sound very good on 11820 about a hour from now.

Australia very strong on 15515 also. Very good reception this evening
where as this morning things were poor.

Some invades the US because they want to change the government. They tell you to just let them do it and they'll leave. What would you do? Fight? You couldn't do that, you would then be a terrorist.

The reasons given were not even the real reason for going into Iraq. If you remember, it was announced that we were going to do it and no reason was given. It was about two weeks later that the supposed reason was announced. The intelligence was shaky and they new it but decided to go with it as they had to say something. Of course, the Brits jumped all over it with their usual me too attitude. Thought it might make them look good and figured that, with the US beside them, the chances of getting their asses kicked were slim.

Thanks, I don't know any specs about them yet, as the first sets we got
turned out to be plug-ins and we need the hard-wired type. They are
expensive, and purportedly have advantages that the XYL's like. Fwiw, I
never experienced anymore than barely noticeable interference from
flourescent lights new or old, incl one within inches of my equipment. But
dimmer switches and sodium (security) lamps can sound like a buzz-saw.

73,

Jack

>the document.

Actually, that's been shown to be untrue. IBM had two models at the
time with the superscript feature. There was another typewriter
manufacturer that had one as well.

Of course, that doesn't mean the documents are genuine. Only that they
could be.

This whole thing wasn't really all that interesting to me until the
fake/real brewhaha broke out; it was already well known bush didn't
show up where he was supposed to be. Old, boring "news".

But what interests me now is the fact that "everyone" seems to "know"
the documents are fake, yet no one can seem to prove it. Seems to me
it would be pretty easy for a well experienced document expert.

Then again, maybe it's just timing. Could be that the republicans have
just such an expert with proof positive that they're fake but figure
it's too early to release. Considering the short attention span and
ignorance of the typical American voter, it would make more sense to
expose it around October 31st.

What you're hearing is almost certainly CODAR transmissions. They are a radio-based method of tracking shifting dunes and eroding coastlines at saltwater beaches. The technology is used on both coasts of the USA. In the DX hobby press, you'll see these signals referred to as "the swisher" or "space zapper". They usually are centered on 4800, but are audible some ten's of kilohertz either side.

I hear CODAR fairly strong at home, but on coastal DXpeditions the racket is really annoying in the lower half of 60 meters.

A tuner solves a specific problem. If you don't have that problem it's
not going to help much. The problem is selectivity. If your radio has
enough for your listening situation then the tuner will not do much for
you other than boost the signal a little that you are trying to hear.
The tuner will reduce the other signals above and below where it is
tuned to your radio.

There are various types of tuners that behave somewhat differently but
this is the GENERIC explanation for them.

You can the maximum benefit from a tuner if it is used to resonate an
ordinarily non-resonant antenna like a random wire Marconi type antenna.
For this to work well the wire is directly connected to the tuner and
then the tuner is connected by coax to the radio. The tuner changes the
ELECTRICAL LENGTH of the wire so it resonates at some frequency. The
boost from using the tuner to resonate the wire can make the difference
between hearing a very weak signal or helping to make it more legible if
it is next to a much stronger station on a nearby channel.

It is basically a DX'ing tool used to tweak the antenna situation in
order to get the weakest of stations.

Antenna tuners for receive have not been very useful in my experience, nor have preamps. The exception is trying to work full duplex on marine radios, then you need a good preselector so that your xmtr does not totally overwhelm the rcvr that is tuned to a nearby freq. It is easy to be fooled by preamps, they make things louder, but they normally amplify noise as much as signal so you are not gaining in S/N ratio. Similarly, antenna tuners give you a peak and you get excited, but compare it to an untuned longwire and you wont hear any difference in most cases. In the case of poorly designed rcvrs, a tuner or tuned preamp might help make up for poor front end design, but with a good rcvr, they just dont do much in my experience. Read a good communications electronics book about noise floor and what it really means. You'll see that there is no magic bullet for reducing random incoherent noise. DSP can work wonders in removing non random noise (hetrodynes, spectral notches, etc). Digital modulation can also work wonders in giving noise free comms. But, when all is said and done noise is random and random stuff is hard to remove. Its all about entropy and electrons. Directional antennas... now there is a way to improve SN, big time in some cases.

Light dimmers are a big enemy of AM BCB or SW listeners which create
some of the worst interference listeners have to deal with. Those units
use solid state switches with very fast rise times for efficiency that
are rich in harmonics. The impulse from these can overwhelm a radios
front end causing intermodulation in the radio. The intermod products
can ruin the entire spectrum the radio is capable of tuning.

> Note that it says "for receive only".

If you're using a portable receiver with a fairly long external antenna,
a passive preselector would be the most useful device between the
antenna and receiver. It would help to eliminate the symptoms of signal
overloading caused by insufficient dynamic range in the receiver. I used
a preselector with the Sony-2010, connected to an inverted-L antenna. It
made a big difference with reducing intermod's.

Quality table-top receivers like the Drake-R8, Icom-R75, AOR-7030 and
many others, don't need a pre-selector or antenna tuner to enhance
reception. They work very well when connected directly to a well
designed external antenna. My R8B uses an inverted-L with a good 'RF'
grounding system to reduce the noise from domestic sources like
televisions and computers. Keeping the noise down is more important than
getting the last bit of energy from the antenna with a tuner.

BTW- The MFJ-959C is "for receive only" because it's componants can't
handle the power from a transmitter. Universal is not trying to give
their opinion on whether you should or should not use an antenna tuner
for receiving.

New Zealand was very good until about 04:40 when they faded out
altogether. At 05:00 when they switched to 11820 they were good at first

then the signal faded. Australia no longer heard either.

The main problem I have with your argument is the USA is not Iraq. I
understand the effort of looking at both sides disagreement by reversing
the situation but the logic of it does not follow unfortunately.

Missing is the motivations of all involved. We have the most freedom of
any nation and if someone invaded to change it then that would be a step
down for us. The intent in Iraq is to start a democracy where the
individual will have more freedom or more say in his life. The people
that are against that are the people that want to control everyone else
and subjugate them.

Well, I can see that the Kerry clan still has not learned the lesson
that the politics of foreign policy disagreements should stay at home in
the USA. Here is an example of meddling in the current administrations
policy. Diana Kerry should get in trouble over this.

There have been at LEAST two elections in Iraq that have been canceled by the occupiers because their guy would have LOST. Is that 'democracy'?

The amount of torture down in the name of this 'democracising' is obscene. Why are they hiding all the new pictures?

The helicopter gunships shooting down scores of unarmed civilians really helps to win hearts and minds. Right...it's working in the stolen areas of Palestine too.

What about the bounty hunters setting up their own private torture centres? The one guy said his connections went right up to the White House..you know what? I believe him.

The unscrupulous, money hungry, immoral bastards have perverted the most sacred of your institutions and YOU still believe every single bit of bullshit they throw your way. Wake up before it's too late.

Iraq is not "stabilized" yet. Stuff like this is going to happen.

> The amount of torture down in the name of this 'democracising' is

I don't know what you are implying here.

> The helicopter gunships shooting down scores of unarmed civilians really
> helps to win hearts and minds. Right...it's working in the stolen areas

War is always bad news. Sometimes innocent people get killed here in the
USA when cops chase and shoot at the criminals. Do you want the cops to
stop doing their job? This is just the result of using force. I could
get killed any day I drive the freeway to work because some idiot can't
control his several ton vehicle at all times.

> What about the bounty hunters setting up their own private torture

They have been arrested and are going to trial. The white house
connection story is just BS to save their behinds.

You are going to believe criminals that torture people over what comes
out of the White house? This is misguided at best.

Well then you may want to talk to:

Stewart H. MacKenzie, WDX6AA
"World Friendship Through Shortwave Radio Where Culture and Language
Meet"
ASWLC - http://groups.yahoo.com/group/ASWLC/
SCADS - http://groups.yahoo.com/group/SCADS/

Stewart is in Huntington beach and sometimes has meetings at his house.
I've never attended one myself.

924. Disappointed in Palstar

Newsgroup: rec.radio.shortwave
Date: 2004-09-20 06:48:23 UTC
From: Margaret von Busenhalter-Butt <deedees@satx.rr.com>
Message-ID: <X2v3d.12384$1d6.643@fe1.texas.rr.com>
Source record: 921

Did a lot of side by side comparisons with my Sony SW77 portable. With Sony AN-1 and AN-LP1 antennas it turned out that the Palstar R30CC was inferior in both SW and MW DX. This was the case with both antennas in a noisy city environment. In a quiet country setting it was a more even match but the Palstar never beat the Sony. OTOH, the SW77 pulled in numerous stations that were not listenable with the Palstar. I'm especially surprised about the MW results because the Palstar is supposed to be a hot rig for that and the SW77 is not. I really liked the Palstar on its own, but now I realize that the receiver has serious shortcomings. For starters it really needs a sync detector to be competitive at its price. Simplicity is not always an asset.

Now I wonder if the Palstar would even be worthy of a Sherwood SE-3 or should I just ebay it right away. I guess I could always keep the SE-3 for my other radios even if the Palstar failed with it.

Any opinions would be appreciated.

Cheers,

Margaret

PS. The SW77 is a darn good radio and the Passport is clueless!

Do you truly believe the senior officers who awarded Kerry's medals some 30 years ago failed to properly review the facts and circumstances of the events surrounding those medals?

"In particular, the senior officers who awarded the medals were properly delegated authority to do so. In addition, we found that they correctly followed the procedures in place at the time for approving these awards." - Navy I.G. Vice Admiral Ronald A. Route

> (snip) However, the actual OIC of that
> mission (as I have shown) flatly denied
> Kerry's original request and it appears
> Kerry did some kind of later end-run
> behind the guy's back and convinced
> someone else that he should get the
> P.H. (snip)

Perhaps you don't understand military procedures. The mission commander (OIC as you call it) had no authority whatsoever to approve or deny a medal. That authority rests with much more senior officers. At the very most, the mission commander can initiate the paperwork for a medal, or, in the situation you describe, refuse to initiate that paperwork. Regardless, he is never the final word. If he refused, as you say, Kerry had a right under military regulations to take the matter up with a higher authority. And, if what you say is actually true about the mission commander refusing to initiate the paperwork, clearly that higher authority disagreed with that mission commander and decided instead to initiate the paperwork himself. At least two even more senior Navy officers, co-signers of that paperwork as it

traveled through the chain-of-command, agreed with that higher authority, as did the office of the Admiral of the Navy when those medals were finally granted.

> (snip) However, I reserve the right to judge
> Kerry as having an apparent character-defect
> in that he would do some kind of end-run
> behind the back of the commander that
> denied him the award

Well, you're certainly free to judge people anyway you choose. However, I'll repeat again that the mission commander had no authority to deny Kerry an award. A mission commander can only initiate or not initiate paperwork. The authority to approve or deny awards rests with officers much more senior than that mission commander. Further, I'll repeat again that the mission commander is not the final word even when it comes to that paperwork. Everyone within the military has a right to appeal decisions through the chain-of-command. In Kerry's case, if that is indeed what Kerry did, that higher ranking officer in that chain-of-command clearly agreed with Kerry, not the mission commander.

> (snip) It gives the appearance that Kerry
> filed the request for that award by less
> than honorable means - either by writing-
> up his own award application -or- he got
> someone else with *zero* first-hand
> knowledge of the events to do it for
> him. (snip)

Military procedures would again dispute that. First, I'm not aware of any situation where a junior officer would be allowed to file paperwork for his own awards. Normal military procedure expects paperwork to be filed by a superior. Second, when signing paperwork for any medal, each signing officer, through the chain-of-command, attests to a review of the facts and circumstances described, and compliance of those facts and circumstances with the award requirements under applicable military regulations. Vice Admiral Route, when reviewing the paperwork for Kerry's medals, said correct procedures were followed in the approval of those awards. That would include the initial paperwork on file all the way up to the final signitures of the granting authority.

We had a sodium-vapour lamp on the way out, in our street. I noticed on my radios a very strong periodic crackling noise. Thought I might have something burning out somewhere. So I used a small Sony radio (7600A) to hunt down the problem. I found that when I went out in the street, away from the house, the noise got louder. I found myself standing underneath the lamp when it went off. (Of course, it came back on a couple of minutes later, as these kind of lamps do that when they are dying).

I reported it to the power company and now all is well!

Wow, sounds like a fab place to be! And some great DX to be had obviously.
Well done.

(I'll just have to be happy with listening to Suva, Fiji, on 558 kHz, which
is not far from here, Auckland, New Zealand).

Source record: 929

There were several version of the ICF 2010 / ICF 2001D. But some of the versions of the ICF2001D were identical to the ICF 2010. I have such an example. It has full frequency coverage, full air band and a power supply that has a switchable voltage selector so you can travel anywhere with it.

So sometimes, the only difference is the model number on the front!

Mark.

It's been suggested that while IBM had machines that could do a
superscript feature, the letters were merely set up above the
baseline. They weren't actually smaller than the rest of the type. If
this is wrong, if IBM or someone else had a feature that would make
SMALLER superscript letters. Then the question is still viable.

> Note that it says "for receive only".

SANJAYA,

The Age Old SWL'ers Question:
Do I Need a Antenna Tuner ? -or- a Pre-Selector ?

The MFJ-959 is OK for what it does. The one feature that would
interest me would be the ability to use it with Two (2) Radios
and Two (2) Antennas. Switch between the Radios and Antennas.
The built-in Amplifier can be helpful for hearing weak signals.

If you are using a simply Random Wire Antenna or any Antenna
with a 'direct' Coax Cable Feed-in-Line. The MFJ-959 should
help in 'matching' you Antenna to the Radio's Input and
improving your signal transfer.

HOWEVER - If you are using an Improved SWL Random Wire Antenna
that uses a 9:1 Matching Transformer (Balun / MLB) then you may
not see any real 'improvement' in your receive signal.

This is the so called "Low Noise" SWL Antenna.
[Please READ These Three Links]
http://www.anarc.org/naswa/badx/antennas/low-noise_antenna.html
http://www.anarc.org/naswa/badx/antennas/SWL_longwire.html
http://www.anarc.org/naswa/badx/antennas/grounding.html
ABOUT THE "LOW NOISE" ANTENNA 'DESIGN CONCEPTS':
A Random Wire Antenna Element coupled via a 9:1 Matching
Transformer at the Near-End of the Antenna with a Ground Rod

and Coax Cable Feed-in-Line to the Receiver. This is the basic
SWL Antenna that uses the "Low Noise Antenna" 'design concepts'
that were popularized by John Doty.

You may also wish to consider these two other MFJ Products:
* MFJ-1045C SWL Receiver Pre-Selector with built-in Amplifier
which covers the Shortwave Bands from 1.8 to 54 MHz.
http://www.universal-radio.com/catalog/preamps/0807.html
* MFJ-1020C Indoor Active Antenna which covers 300 kHz to
40 MHz (LW, AM/MW and SW Bands) in five bands; and when used
with an External (OutSide) Antenna, the MFJ-1020C functions
as a Pre-Selector.
http://www.universal-radio.com/catalog/sw_ant/1413.html

FWIW: I use a Low Noise SWL Antenna with a Grove Mini-Tuner
"TUN 3" which is very much like the MFJ-956 MFJ-956 Long Wave,
Medium Wave and Shortwave Pre-Selector Tuner.
http://www.universal-radio.com/catalog/preamps/2964.html
- Most times I simply use it in the ByPass Mode.
- Sometimes I will switch it over ti Fine-Tune a Signal.
- The major reason I use it is to Switch-Out "Ground-Out"
the Antenna when I am not using the Radio for Safety.

RadioNews,

If the polls continue to show President George "W" Bush ahead of
Senator John 'ff' Kerry by 4%-6% Nation-Wide and "IF" the
projected Electoral College Vote is about Bush~320 and Kerry~218.

Then it is thought that some (many) Democrat Voters may not go
to the Polls and Vote.

IF (Big 'If') this happens then it will cost the Democrats in
both the US House and US Senate elections. Resulting in a
'loss' of Seats in both the US House and US Senate.

John 'ff' Kerry may not only "GO DOWN" but he may also take
the Democrat's in the US House and US Senate with him.
BIG TIME !

John 'ff' Kerry may end-up being a Bigger Electoral Disaster
than Al Gore was in 2000 for the Democrats.

ssi ~ RHF

One thing is for sure: It's given folks like you a cottage industry in BS.

> - So, give them four more years....
> Yeah, Right..

Damn right. It'll be a lot better than four years under the rudderless Kerry.

> So sayeth Swift Boat Liars For Cash

Let's see, would those be the Swift Boat fellows who support Kerry? Questions have been asked about the 254 getting 'cash or jobs', so how about those who support Kerry? Are they getting 'cash or jobs'?

> Wish he'd just sat in the oval office doing Lines of Coke...

Would you have joined him?

Kerry is toast.

dxAce
A Navy and National Guard Veteran who will not be voting for John Fraud Kerry.

I mostly use 9:1 impedance matching transformers I wound myself according to the directions on CW's web site.

<http://www.kc7nod.20m.com/new_page_1.htm>

On antennas:

#1 is out at the moment because of a lightning strike a few weeks ago and I've been too busy to get it replaced - but it was a 65' random wire made with #14 wire that's 225 feet away from my house (and farther from the neighbors) The coax is underground. It gets practically no RFI. I'm sure it would work almost as well if it was 60-70 feet away from the house, but I don't have tall sturdy trees there.

Here's a web site with a discussion of this type of antenna.

<http://www.anarc.org/naswa/badx/antennas/low-noise_antenna.html>

#2 is a triangular horizontal loop antenna that's partially over the house. It was made with about 150 feet of #14 wire. Loops are low noise designs, but my house is filled with gizmos that cause rfi, so it's not my favorite. It has a 4:1 impedance matching transformer.

#3 was my first antenna at the house - it's 40 feet of wire stapled to the rafters in my attic. It's closer to the RFI and I haven't used it in years. 9:1 transformer.

#4 is my current camping and vacation antenna. It's a 3 meter folding whip originally intended for a PRC-25 or PRC-77 with a 9:1 impedance matching transformer that mounts onto a photographic tripod. It works quite well.

#5 is an Electro-Metrics ALR-25 Loop. I still need to create a control box to switch bands on it electrically, but ultimately, this may become the "portable" antenna for places I can drive to where I need to use an indoor antenna. This has it's own impedance matching circuitry built in.

I have some extra #43 ferrite's on hand that are a little smaller than the one CW's design calls for. They work well. If you'd like one, you can have it for the price of a small padded mailing bag and a couple of stamps. Contact me directly for details.

I'vr own one for over a year. It works good on local AM/FM stations and also on the masjor SW Broadcasters with very little drifting. When outside I use one of yhose rollup antennas with an alligator clip to attach it to the radio . With the rollup antenna, I keep the antenna down except for about 1/2 inch to clip to as there is no swivel. Battery lifes is excellent and only replaced the 2 AA's three times since owning it. The tuning knob is "stiff" but thats better then free spinning on a small radio.

I also did a lot of comparisons using my R30cc against jrc 535D, R8,
and a Sattellit 800, and was very dissapointed, the only way it was
comparable was using a SE-3 and a kiwa shortwave preamp, the only
advantage is its portability

E-bay it. If you're a sync freak now, then you'll be a sync freak six months down the road. If you leave the radio on all the time and align the radio, you might or might not be able to make do with ECSS. I know that I use ECSS a lot less than I would have used a sync detector, given the 20-Hz tuning steps on the Palstar. I use it only when the fades are deep enough to make things relatively unintelligible.

As for reception issues, grounding would be a cheap way to see if you want to keep the radio. The AC adaptor provides a fair deal of ground but not as much as you might want. Pound either a) one 10-foot ground rod or b) two hollow 10-foot copper pipes into the ground, wire the ground rod(s) to the ground post on the Palstar, and see if that makes a difference. If it doesn't work, hey, you can still use that ground to ground your home stereo, or you can ground the Superadio III that you might also consider for MW DX.

I've had little luck getting good MW DX from the low-impedance antenna jack on the Palstar, at least not the right way. On most dipoles of sane length--I'm talking from 126 feet down to the 30 feet that mine is at present, with lots of stops in between--the Palstar sucks on MW unless I put only the center pin into the connector. My best results have been with a) very long wires hooked up to the high-impedance antenna jack, b) a Select-A-Tenna Hardwire Edition (to the same jack), and c) about fifty feet of wire wrapped through a hula hoop (again, to the same jack). All but b) require a good ground.

As for SW, I use the dipoles that I've always used, and they work much better than for my other radios. However, I did get to run it at a relative's ham shack, with a long dipole, a vertical, a short dipole, and a Windom at my disposal; and the Palstar kept up with the rigs in his shack without problem. I came home and felt that at least some of my setup was lacking, as usual. That's what happens when a 11-year SWL goes and plays in a veteran ham environment.

CASE CLOSED:

September 20, 2004
THE NEWS MEDIA
CBS News Concludes It Was Misled on National Guard Memos, Network Officials Say
By JIM RUTENBERG

fter days of expressing confidence about the documents used in a "60 Minutes'' report that raised new questions about President Bush's National Guard service, CBS News officials have grave doubts about the authenticity of the material, network officials said last night.

The officials, who asked not to be identified, said CBS News would most likely make an announcement as early as today that it had been deceived about the documents' origins. CBS News has already begun intensive reporting on where they came from, and people at the network said it was now possible that officials would open an internal inquiry into how it moved forward with the report. Officials say they are now beginning to believe the report was too flawed to have gone on the air.

But they cautioned that CBS News could still pull back from an announcement. Officials met last night with Dan Rather, the anchor who presented the report, to go over the information it had collected about the documents one last time before making a final decision. Mr. Rather was not available for comment late last night.

The report relied in large part on four memorandums purported to be from the personal file of Mr. Bush's squadron commander, Lt. Col. Jerry B. Killian, who died 20 years ago. The memos, dated from the early 1970's, said that Colonel Killian was under pressure to "sugar coat'' the record of the young Lieutenant Bush and that the officer had disobeyed a direct order to take a physical.

Mr. Rather and others at the network are said to still believe that the sentiment in the memos accurately reflected Mr. Killian's feelings but that the documents' authenticity was now in grave doubt.

The developments last night marked a dramatic turn for CBS News, which for a week stood steadfastly by its Sept. 8 report as various document experts asserted that the typeface of the memos could have been produced only by a modern-day word processor, not Vietnam War-era typewriters.

The seemingly unflappable confidence of Mr. Rather and top news division officials in the documents allayed fears within the network and created doubt among some in the news media at large that those specialists were correct. CBS News officials had said they had reason to be certain that the documents indeed had come from the personal file of Colonel Killian.

Sandy Genelius, a network spokeswoman, said last week, "We are confident about the chain of custody; we're confident in how we secured the documents.''

But officials decided yesterday that they would most likely have to declare that they had been misled about the records' origin after Mr. Rather and a top network executive, Betsy West, met in Texas with a man who was said to have helped the news division obtain the memos, a former Guard officer named Bill Burkett.

Mr. Rather interviewed Mr. Burkett on camera this weekend, and several people close to the reporting process said his answers to Mr. Rather's questions led officials to conclude that their initial confidence that the memos had come from Mr. Killian's own files was not warranted. These people indicated that Mr. Burkett had previously led the producer of the piece, Mary Mapes, to have the utmost confidence in the material.

It was unclear last night if Mr. Burkett had told Mr. Rather that he had been misled about the documents' provenance or that he had been the one who did the misleading.

In an e-mail message yesterday, Mr. Burkett declined to answer any questions about the documents.

Yesterday, Emily J. Will, a document specialist who inspected the records for CBS News and said last week that she had raised concerns about their authenticity with CBS News producers, confirmed a report in Newsweek that a producer had told her that the source of the documents said they had been obtained anonymously and through the mail.

In an interview last night she declined to name the producer who told her this but said the producer was in a position to know. CBS News officials have disputed her contention that she warned the network the night before the initial "60 Minutes'' report that it would face questions from documents experts.

In the coming days CBS News officials plan to focus on how the network moved ahead with the report when there were warning signs that the memorandums were not genuine.

Ms. Will is one of two documents experts consulted by the network who said they raised doubts about the material before the segment was broadcast. Another expert, Marcel B. Matley, said in interviews that he had vouched only for Colonel Killian's signatures on the records and not the authenticity of the records themselves. Mr. Matley said he could not rule out that the signatures had been cut and pasted from official records pertaining to Colonel Killian.

In examining where the network had gone wrong, officials at CBS News turning their attention to Ms. Mapes, one of their most respected producers, who was riding particularly high this year after breaking news about the Abu Ghraib prison scandal for the network.

In a telephone interview this weekend, Josh Howard, the executive producer of the "60 Minutes'' Wednesday edition, said that he did not initially know who was Ms. Mapes' primary source for the documents but that he did not see any reason to doubt them. He said he believed Ms. Mapes and her team had appropriately answered all questions about the documents' authenticity and, he noted, no one seemed to be casting doubt upon the essential thrust of the report.

"The editorial story line was still intact, and still is, to this day,'' he said, "and the reporting that was done in it was by a person who has turned in decades of flawless reporting with no challenge to her credibility.''

He added, "We in management had no sense that the producing team wasn't completely comfortable with the results of the document analysis.''

Ms. Mapes has not responded to requests for comment.

Mr. Howard also said in the interview that the White House did not dispute the veracity of the documents when it was presented to them on the morning of the report. That reaction, he said, was "the icing on the cake'' of the other reporting the network was conducting on the documents. White House officials have said they saw no reason to challenge documents being presented by a credible news organization.

Several people familiar with the situation said they were girding for a particularly tough week for Mr. Rather and the news division should the network announce its new doubts.

One person close to the situation said the critical question would be, "Where was everybody's judgment on that last day?''

So what?

Nobody can refute that what they say is factual.

Someone who had access to the information could have
compiled them as a summary when Bush's thugs started
destroying the originals. That person would be a hero.

They're merely mistaken.

>I don't like W., but this is not going to help.

Again, it's the bushkultie's whining about things the bushkultie
doesn't understand, which in no way refutes the contents of the
documents showing that Bush is a disgrace to the US military.
He's proven that subsequently, as well.

Good points.

One can't help but notice Bush's total incapacity to refute the contents.

That's what counts.

The Bush WH has released other documents with the same feature.

It would most likely be Trans World Radio in Polish directed to Eastern Europe. They use 6235 and 7380 between 0515 and 0530, transmitters in Albania. This transmission appears to be 7 days a week.

Monday through Friday at 0530 they apparently switch to Slovak till 0545 on 6235 via Albania and 7210 via Germany.

What counts is your are a fucking moron:

a) Bush has refuted the contents

b) CASE CLOSED:

September 20, 2004
THE NEWS MEDIA
CBS News Concludes It Was Misled on National Guard Memos, Network Officials Say
By JIM RUTENBERG

fter days of expressing confidence about the documents used in a "60 Minutes'' report that raised new questions about President Bush's National Guard service, CBS News officials have grave doubts about the authenticity of the material, network officials said last night.

The officials, who asked not to be identified, said CBS News would most likely make an announcement as early as today that it had been deceived about the documents' origins. CBS News has already begun intensive reporting on where they came from, and people at the network said it was now possible that officials would open an internal inquiry into how it moved forward with the report. Officials say they are now beginning to believe the report was too flawed to have gone on the air.

But they cautioned that CBS News could still pull back from an announcement. Officials met last night with Dan Rather, the anchor who presented the report, to go over the information it had collected about the documents one last time before making a final decision. Mr. Rather was not available for comment late last night.

The report relied in large part on four memorandums purported to be from the personal file of Mr. Bush's squadron commander, Lt. Col. Jerry B. Killian, who died 20 years ago. The memos, dated from the early 1970's, said that Colonel Killian was under pressure to "sugar coat'' the record of the young Lieutenant Bush and that the officer had disobeyed a direct order to take a physical.

Mr. Rather and others at the network are said to still believe that the sentiment in the memos accurately reflected Mr. Killian's feelings but that the documents' authenticity was now in grave doubt.

The developments last night marked a dramatic turn for CBS News, which for a week stood steadfastly by its Sept. 8 report as various document experts asserted that the typeface of the memos could have been produced only by a

modern-day word processor, not Vietnam War-era typewriters.

The seemingly unflappable confidence of Mr. Rather and top news division officials in the documents allayed fears within the network and created doubt among some in the news media at large that those specialists were correct. CBS News officials had said they had reason to be certain that the documents indeed had come from the personal file of Colonel Killian.

Sandy Genelius, a network spokeswoman, said last week, "We are confident about the chain of custody; we're confident in how we secured the documents.''

But officials decided yesterday that they would most likely have to declare that they had been misled about the records' origin after Mr. Rather and a top network executive, Betsy West, met in Texas with a man who was said to have helped the news division obtain the memos, a former Guard officer named Bill Burkett.

Mr. Rather interviewed Mr. Burkett on camera this weekend, and several people close to the reporting process said his answers to Mr. Rather's questions led officials to conclude that their initial confidence that the memos had come from Mr. Killian's own files was not warranted. These people indicated that Mr. Burkett had previously led the producer of the piece, Mary Mapes, to have the utmost confidence in the material.

It was unclear last night if Mr. Burkett had told Mr. Rather that he had been misled about the documents' provenance or that he had been the one who did the misleading.

In an e-mail message yesterday, Mr. Burkett declined to answer any questions about the documents.

Yesterday, Emily J. Will, a document specialist who inspected the records for CBS News and said last week that she had raised concerns about their authenticity with CBS News producers, confirmed a report in Newsweek that a producer had told her that the source of the documents said they had been obtained anonymously and through the mail.

In an interview last night she declined to name the producer who told her this but said the producer was in a position to know. CBS News officials have disputed her contention that she warned the network the night before the initial "60 Minutes'' report that it would face questions from documents experts.

In the coming days CBS News officials plan to focus on how the network moved ahead with the report when there were warning signs that the memorandums were not genuine.

Ms. Will is one of two documents experts consulted by the network who said they raised doubts about the material before the segment was broadcast. Another expert, Marcel B. Matley, said in interviews that he had vouched only for Colonel Killian's signatures on the records and not the authenticity of the records themselves. Mr. Matley said he could not rule

out that the signatures had been cut and pasted from official records pertaining to Colonel Killian.

In examining where the network had gone wrong, officials at CBS News turning their attention to Ms. Mapes, one of their most respected producers, who was riding particularly high this year after breaking news about the Abu Ghraib prison scandal for the network.

In a telephone interview this weekend, Josh Howard, the executive producer of the "60 Minutes'' Wednesday edition, said that he did not initially know who was Ms. Mapes' primary source for the documents but that he did not see any reason to doubt them. He said he believed Ms. Mapes and her team had appropriately answered all questions about the documents' authenticity and, he noted, no one seemed to be casting doubt upon the essential thrust of the report.

"The editorial story line was still intact, and still is, to this day,'' he said, "and the reporting that was done in it was by a person who has turned in decades of flawless reporting with no challenge to her credibility.''

He added, "We in management had no sense that the producing team wasn't completely comfortable with the results of the document analysis.''

Ms. Mapes has not responded to requests for comment.

Mr. Howard also said in the interview that the White House did not dispute the veracity of the documents when it was presented to them on the morning of the report. That reaction, he said, was "the icing on the cake'' of the other reporting the network was conducting on the documents. White House officials have said they saw no reason to challenge documents being presented by a credible news organization.

Several people familiar with the situation said they were girding for a particularly tough week for Mr. Rather and the news division should the network announce its new doubts.

One person close to the situation said the critical question would be, "Where was everybody's judgment on that last day?''

953. (OT) Democrats are about to become French Toast [Was: (OT) Kerry Is Toast]

Newsgroup: rec.radio.shortwave
Date: 2004-09-20 13:16:02 UTC
From: rhf-newsgroups@pacbell.net
Message-ID: <ff3145e8.0409200516.18710409@posting.google.com>
Source record: 950

(OT) Democrats are about to become French Toast

If the polls continue to show President George "W" Bush ahead of
Senator John 'ff' Kerry by 4%-6% Nation-Wide and "IF" the
projected Electoral College Vote is about Bush~330 and Kerry~208.

Electoral College Scoreboard: Bush Dominating Now Leads 336-202
http://www.washingtondispatch.com/page2/

Electoral College Trend
EC-TREND=> http://www.spacerad.com/electoral/trend_short.html

Then it is thought that some (many) Democrat Voters may not go
to the Polls and Vote.

"IF" (Big 'If') this happens then it will cost the Democrats
in both the US House and US Senate elections. Resulting in a
'loss' of Demcorat Seats in both the US House and US Senate.

John 'ff' Kerry may not only "GO DOWN" {Be Toast} but he may
also take the Democrat's in the US House and US Senate with him.
The Democrat's Running for Congress may be French Toast - BIG TIME !

John 'ff' Kerry may end-up being a Bigger Electoral Disaster in
2004 than Al Gore was in 2000 for the Democrats.

Dan Rather, Bill Burkett do a Re-Assembled Interview
TWD=> http://www.washingtondispatch.com/page2/
- The Washington Dispatch
- 19 September 2004
- by CK Rairden

* CBS News anchor Dan Rather has interviewed the retired
lieutenant colonel widely believed to have helped provide
"60 Minutes" with the disputed National Guard documents about
President Bush that have created a credibility crisis for the
network, and CBS plans to air the interview in the coming days.

* The on-camera sit-down with Bill Burkett, who has urged
Democratic activists to wage "war" against Republican "dirty
tricks," could help resolve whether CBS continues to stand by
its story or concedes the purported 30-year-old memos are
forgeries, as numerous document experts have contended.

* It's difficult to see how this can end in a good way for Dan
Rather and CBS, no matter what Burkett coughs up. He's been
discredited thoroughly with his own writings as any kind of
"source."

* Burkett's comments in an August 25th published rant included,
"[Mr. Bush] I know from your files that we have now reassembled,
{Re-Created - Re-Manufactured} the fact that you did not fulfill
your oath, taken when you were commissioned to "obey the orders
of the officers appointed over you."

I was a recent evacuee from hurricane Ivan. My AM radio in my new truck (2004) lost reception of WWL AM after the first 150 miles. This was not the case in my old truck (same , different year.) I am looking for a new current car stereo that has exceptional AM band reception. Anyone know of any?

It sounds to me like Google is going to "piggy back" their new service onto the Usenet groups, not replace them. From their "About Google Groups" page:

"You can also use Google Groups to post your own comments to an existing Usenet newsgroup."

Personally, I think they're messing with a tried and true public forum and I hope their efforts will flop. I'm sure they are envious of YahooGroup's success and would like to get part of their "business".

At 1255, I had RRI Fak Fak with a good signal this morning during dawn enhancement of signals. The level seemed about the same as I've heard since the end of August.

I also noticed that ZLXA Levin (NZ) on 3935 continues stronger than in the past. For years they've had weak, watery audio or were only heard with a het, but lately their signal has been at the level it was in the early 1990s (ie., fair during decent DU openings).

Does it work better with the engine off?

(seriously. Often the problem isn't a bad radio but a bad noise problem
coming from elsewhere in the vehicle.)

What (other than blind hope) makes you say the contents have been fully verified?

Killian's family said the forged memos don't agree with the sentiments he expressed to them.

The retired General says nobody contacted him to get Bush into the guard - he was a desirable candidate. He's also said he didn't contact Killian about Bush after he retired.

970. Communist government promotion ??

Newsgroup: rec.radio.shortwave
Date: 2004-09-20 15:39:25 UTC
From: Al Patrick <arp@_NOSPAM_inet4u.com>
Message-ID: <10ktudb1mkpir10@corp.supernews.com>
Source record: 966

This morning I was in eastern NC scanning the SW dial because my "regular" station did not come in too well about 8:00 a.m.

I flipped to 9650 because I knew Seoul (? sp), S. Korea usually came in pretty well that time of day. It came in very well, but I soon tired of it and flipped to a station that seemed to be promoting communism.

They told of Castro and how he prepared his people for Ivan the hurricane by going on air live about 3 or 4 hours per night for several nights prior to Ivan's arrival. They boasted of the trucks coming and hauling off the people with their refrigerators, etc. so no one lost a life in Cuba (as opposed to several states in the U.S.A.) and not too much property damage to the occupants' personal property. They didn't mention the real property - probably because communist countries don't allow much of it. They probably lived in "government" housing.

They concluded by saying something like "Ivan is no match for Castro" but those are probably not the exact words.

Then came the announcement: You are listening to NATIONAL PUBLIC RADIO! (I had pressed the FM button to get the local news.) Isn't it nice that we spend years defending the world from communism and then our national public radio system boasts of how wonderful it is?

In case you doubt any of this or wish to have the exact wording you might need to contact NPR or check their web site.

DX is a term usually applied to distant, weak or otherwise challenging signals.

SWLing applies to any shortwave listening.

Perhaps the report was factually correct, and the Cuban people -were-
appropriately prepared. I'm not sure I see this as "promoting
Communism;" Ivan is a big story, so what's a little fawning over

Castro among friends. IMO, NPR's obvious bias is usually as apparent in what they -don't- cover as in what they do. I doubt, for example, that they're all too concerned with the dissidents in Castro's prisons.

CBS Plans New Memos Statement
NEW YORK, 20 SEPT 2004
http://www.cbsnews.com/stories/2004/09/06/politics/main641481.shtml

CBS HAS NOT REVEALED WHO PROVIDED THE DOCUMENTS OR HOW THEY WERE OBTAINED.

WHO IS CBS PROTECTING ?

WHAT - Did 60 Minutes Know ? {about the Forged Documents}

WHEN - Did Dan Rather Know It ? {about these Fake Documents}

HOW - Is 60 Minutes 'involvement' in/with these Forged Documents ?

WHY - Has 60 Minutes Not Acted to Tell the Truth ?
{about these Forged 'Fake' Documents}

* According to The Washington Post, the network plans to say
it was misled about the authenticity of the documents.

* The New York Times reports that CBS News officials met Sunday
evening with anchor Dan Rather, the reporter of the contested
story, to discuss the network's next steps.

* The Post and Times report that CBS' latest move comes after
Rather met in Texas with Bill Burkett, a former Texas National
Guard official who has been named as a possible source for the
documents.

* It was not clear if the network planned to apologize, the
Post reported.

CBS can't be trusted in any of this, no matter what they say at this point in time.

They, and Dan Blather were warned about the documents before they went to air with them. Then they tried a bit of CYA, that didn't work, now they are falling back on this story.

Burkett apparently gave the documents to CBS. But who gave them to Burkett?

Someone in the Kerry Kampaign?

Kerry is toast.

DRUDGE REPORT . Com
EXCLUSIVE // Mon Sep 20 2004 11:58:02 ET
SOURCE=> http://www.drudgereport.com/

STATEMENT FROM DAN RATHER:

Last week, amid increasing questions about the authenticity of documents used in support of a 60 MINUTES WEDNESDAY story about President Bush's time in the Texas Air National Guard, CBS News vowed to re-examine the documents in questionï¿½and their sourceï¿½ vigorously. And we promised that we would let the American public know what this examination turned up, whatever the outcome.

Now, after extensive additional interviews, I no longer have the confidence in these documents that would allow us to continue vouching for them journalistically. I find we have been misled on the key question of how our source for the documents came into possession of these papers. That, combined with some of the questions that have been raised in public and in the press, leads me to a point whereï¿½if I knew then what I know nowï¿½I would not have gone ahead with the story as it was aired, and I certainly would not have used the documents in question.

But we did use the documents. We made a mistake in judgment, and for that I am sorry. It was an error that was made, however, in good faith and in the spirit of trying to carry on a CBS News tradition of investigative reporting without fear or favoritism.

Please know that nothing is more important to us than people's trust in our ability and our commitment to report fairly and truthfully.
.
.
Statement from Dan Rather - Misled - Mistake - I Am Sorry
{ But NO Apology to President George "W" Bush }
.
WHY WON'T DAN RATHER APOLOGIZE TO PRESIDENT BUSH AND HIS FAMILY ?
.
WHY WON'T CBS NEWS APOLOGIZE TO THE AMERICAN PEOPLE ?
.
.
CBS Plans New Memos Statement
NEW YORK, 20 SEPT 2004
http://www.cbsnews.com/stories/2004/09/06/politics/main641481.shtml

CBS HAS NOT REVEALED WHO PROVIDED THE DOCUMENTS OR HOW THEY WERE OBTAINED.

WHO IS CBS PROTECTING ?

WHAT - Did 60 Minutes Know ? {about the Forged Documents}

WHEN - Did Dan Rather Know It ? {about these Fake Documents}

HOW - Is 60 Minutes 'involvement' in/with these Forged Documents ?

WHY - Has 60 Minutes Not Acted to Tell the Truth ?
{about these Forged 'Fake' Documents}

* According to The Washington Post, the network plans to say it was misled about the authenticity of the documents.

* The New York Times reports that CBS News officials met Sunday evening with anchor Dan Rather, the reporter of the contested story, to discuss the network's next steps.

* The Post and Times report that CBS' latest move comes after Rather met in Texas with Bill Burkett, a former Texas National Guard official who has been named as a possible source for the documents.

* It was not clear if the network planned to apologize, the Post reported.

Don't know if anyone mentioned removing the R-75's mw attenuator, which should help make the R-75 more amenable as an mw dx tool. Antenna orientation is a factor, also. Have a 130 ft. of 16 gauge wire, ground terminated for a beveredge effect. Is most efficient bringing in Bay Area & SoCal am'ers. But it's a bit deaf snagging Denver's flamethrower KOA , however.

BREAKING NEWS CBS says it cannot vouch for authenticity of documents
broadcast on '60 Minutes' that cast doubt on President Bush's National
Guard record. Details soon.

> THE NEWS MEDIA
> CBS News Concludes It Was Misled on National Guard Memos, Network Officials
> Say
> By JIM RUTENBERG
>
> fter days of expressing confidence about the documents used in a "60
> Minutes'' report that raised new questions about President Bush's National
> Guard service, CBS News officials have grave doubts about the authenticity
> of the material, network officials said last night.
>
> The officials, who asked not to be identified, said CBS News would most
> likely make an announcement as early as today that it had been deceived
> about the documents' origins. CBS News has already begun intensive reporting
> on where they came from, and people at the network said it was now possible
> that officials would open an internal inquiry into how it moved forward with
> the report. Officials say they are now beginning to believe the report was
> too flawed to have gone on the air.
>
> But they cautioned that CBS News could still pull back from an announcement.
> Officials met last night with Dan Rather, the anchor who presented the
> report, to go over the information it had collected about the documents one
> last time before making a final decision. Mr. Rather was not available for
> comment late last night.
>
> The report relied in large part on four memorandums purported to be from the
> personal file of Mr. Bush's squadron commander, Lt. Col. Jerry B. Killian,
> who died 20 years ago. The memos, dated from the early 1970's, said that
> Colonel Killian was under pressure to "sugar coat'' the record of the young
> Lieutenant Bush and that the officer had disobeyed a direct order to take a
> physical.
>
> Mr. Rather and others at the network are said to still believe that the
> sentiment in the memos accurately reflected Mr. Killian's feelings but that
> the documents' authenticity was now in grave doubt.
>
> The developments last night marked a dramatic turn for CBS News, which for a
> week stood steadfastly by its Sept. 8 report as various document experts
> asserted that the typeface of the memos could have been produced only by a
> modern-day word processor, not Vietnam War-era typewriters.
>
> The seemingly unflappable confidence of Mr. Rather and top news division
> officials in the documents allayed fears within the network and created
> doubt among some in the news media at large that those specialists were
> correct. CBS News officials had said they had reason to be certain that the
> documents indeed had come from the personal file of Colonel Killian.
>
> Sandy Genelius, a network spokeswoman, said last week, "We are confident
> about the chain of custody; we're confident in how we secured the
> documents.''
>

> But officials decided yesterday that they would most likely have to declare
> that they had been misled about the records' origin after Mr. Rather and a
> top network executive, Betsy West, met in Texas with a man who was said to
> have helped the news division obtain the memos, a former Guard officer named
> Bill Burkett.
>
> Mr. Rather interviewed Mr. Burkett on camera this weekend, and several
> people close to the reporting process said his answers to Mr. Rather's
> questions led officials to conclude that their initial confidence that the
> memos had come from Mr. Killian's own files was not warranted. These people
> indicated that Mr. Burkett had previously led the producer of the piece,
> Mary Mapes, to have the utmost confidence in the material.
>
> It was unclear last night if Mr. Burkett had told Mr. Rather that he had
> been misled about the documents' provenance or that he had been the one who
> did the misleading.
>
> In an e-mail message yesterday, Mr. Burkett declined to answer any questions
> about the documents.
>
> Yesterday, Emily J. Will, a document specialist who inspected the records
> for CBS News and said last week that she had raised concerns about their
> authenticity with CBS News producers, confirmed a report in Newsweek that a
> producer had told her that the source of the documents said they had been
> obtained anonymously and through the mail.
>
> In an interview last night she declined to name the producer who told her
> this but said the producer was in a position to know. CBS News officials
> have disputed her contention that she warned the network the night before
> the initial "60 Minutes'' report that it would face questions from documents
> experts.
>
> In the coming days CBS News officials plan to focus on how the network moved
> ahead with the report when there were warning signs that the memorandums
> were not genuine.
>
> Ms. Will is one of two documents experts consulted by the network who said
> they raised doubts about the material before the segment was broadcast.
> Another expert, Marcel B. Matley, said in interviews that he had vouched
> only for Colonel Killian's signatures on the records and not the
> authenticity of the records themselves. Mr. Matley said he could not rule
> out that the signatures had been cut and pasted from official records
> pertaining to Colonel Killian.
>
> In examining where the network had gone wrong, officials at CBS News turning
> their attention to Ms. Mapes, one of their most respected producers, who was
> riding particularly high this year after breaking news about the Abu Ghraib
> prison scandal for the network.
>
> In a telephone interview this weekend, Josh Howard, the executive producer

> of the "60 Minutes'' Wednesday edition, said that he did not initially know
> who was Ms. Mapes' primary source for the documents but that he did not see
> any reason to doubt them. He said he believed Ms. Mapes and her team had
> appropriately answered all questions about the documents' authenticity and,
> he noted, no one seemed to be casting doubt upon the essential thrust of the
> report.
>
> "The editorial story line was still intact, and still is, to this day,'' he
> said, "and the reporting that was done in it was by a person who has turned
> in decades of flawless reporting with no challenge to her credibility.''

Ramadan begins this year on either October 15 or 16. I checked a few sites and come up with the two different dates.

Look for extended broadcast sckeds from countries that celebrate Ramadan.

It's probably a crap semi-auto SKS. They were a dime a dozen before the
Clinton ban. Now if it's truely an "assault weapon", meaning full-auto
capability he has a mess on his hands....again.

Anyone who thinks Kerry is pro-hunting or pro-gun is uninformed to say the
least.

Bush knows he deserted.

That's why he can't refute the facts found in the
documents CBS used.

I'm fairly certain that overall, there's a lot more explosives out there in the world than 350 tons or 380 tons or how many tons a Canadian 'tard boy wants to spin it.

How many tons of high explosives does Canada have? Perhaps we should make a move to secure it?

I await your answer, 'tard boy.

Heh. In 1984, my high school class held a mock
presidential election. Bill the Cat and Opus (from
Bloom County) got more votes than Mondale did...

Must've been a great school, obviously your so called teachers didn't do a very good job of teaching you who the candidates were, or else you and your classmates simply didn't pay attention.

I'm not surprised, in any case.

You can see folks, that the liberals are just plain damn ass stupid. Always have been, always will be.

But hey, they've always learned how to hold their hand out.

That seems easy enough to learn.

> >
> > -Brian

I have also had good luck with the MFJ-1026, unmodified. It works
very well on some types of noise, and marginally well on others. What
I have found recently is that, if you can identify a source of noise
and eliminate it before it comes through the antenna or AC, you're way
ahead of the game. For real extrenal noise, like powerline noise
coming on the antenna itself and for which an RF choke won't work, the
MFJ unit can be a blessing.

It also works well removing offending adjacent channel (or even
co-channel) interference. In cities especially, where strong
nighttime groundwave signals can overwhelm DX, the MFJ can nearly
erase most of them and let the DX come through.

but, as John reminds us, only one source at a time. I have never
tried stacking them for multiple noise reduction.

Good luck,
Bruce Jensen

<snip>

Or they may have felt Bill the Cat and Opus were more credible candidates.

That was the election where the final result in the electoral college was 525-13.

Well, we certainly do need oil, or gas. Try doing without it.

To the best of my knowledge every President in the past 75-100 years has been
friendly to the House of Saud.

They certainly have their problems, as well do we.

Well, I can't offer you anything in Mozambique Steve,
But have you got Angola on 7216.8?
It's on air but a difficult catch even here.
WRTH lists it as 100 Kw, but I think it is much less powerful than that.

Already have Angola QSL'd here, Radio Nacional, Dec. 5, 1986, on 4952.

Probably running either 1 or 5 kw.

Yes, it is radio transmitted digitally. Give a listen up on 3995 in our North American evenings and listen to the QRM.

And then try and imagine what that sort of thing will do to the other shortwave broadcasting bands.

This has been stated before many times, but it worth reiterating - The
real problem with this election, and the current two-party system in
general, is that
there is no candidate that gets the best of both philosophies, has
some good common-sense material in the center, and eschews all the
rubbish that both carry with them - in other words, a
fair-and-just-for-all candidate.

We need a candidate whose CIA will zero in on the terrorists with
deadly accuracy and who will embrace diversity without (1) letting in
every Tom, Dick and Harry unmitigatedly and (2) simultaneously
encourage all to work toward the good goals envisioned by the Founders
230 years ago. We need one who will recognize that it takes both
business and the workers working together cooperatively to ensure that
everybody gets a fair shake. We need one that recognizes that a
rapidly-growing 10 trillion dollar national debt is going to come back
and pile-drive this country into the grave (or at least a vicious
civil war) if we don't take some instant steps, and make some
significant sacrifices, to bring it back down. We need a candidate
that is going to recognize that you can't have a healthy democracy
without healthy people living in a healthy environment, and at the
same time realize that for humans or any animal to survive, it takes
some use of natural resources, hopefully with wisdom and restraint.
We need a candidate, a system, in which compassion for all humans (and
in my opinion, living things) is a guiding principle, and in which
strenght and power are used to elevate the person that is willing to
pitch in and be a good citizen.

Finally, we nede a candidate that is in it for something other than
his own and his party's well-being.

Just my opinion, but show me where I am wrong.

Neither one of the candidates seems to bring these qualities to the table. I am dead certain that Bush does not - he has proven it conclusively and repeatedly and in so many foolish and selfish ways that I have come to expect nothing good from him. His demagoguery is so bad and so quasi-Fascistic, and worse yet, his inconsistency when he talks about forgiving illegal immigrants with not so much as a quick oath of allegiance, that I cannot see how any red-blooded American can stomach him. I know less about Kerry, but his general demeanor and flow of ideas, which go pretty far left in many cases, do not provide me with much confidence that he can bring stability to this country. It seems that good people these days decide not to become candidates, but instead to let the most pathetic dregs of society become their leaders...and then mostly ignore the garbage they pile on us. Maybe nobody good is left.

We need a sensible, smart, tough, compassionate, wise leader, one who can show real people from all sides that fiscal, physical, national health is a goal worth pursuing and with the ideas to head in that direction. If we're going to be a shining light to the world (and reacquire our own badly misguided way in the dark), we need someone a lot better than the philosophical dwarves who want your vote this time around.

I fear for our nation's future, my child's future. I can survive the second half of my life under most any regime - but our kids deserve the best, and we ain't giving it to them...not this time anyway, not by a country mile.

God bless America - please, we beg You...we haven't needed it this much since 1860. Amen.

Bruce Jensen

Ahem. Reagan won by something like 85% of the
vote. Bill the Cat/Opus got something like 13%.
Mondale got 2%.

You never had goofballs and the followers of
goofballs in your school?? They were the ones
who voted for Bill/Opus.

Yes it was. The percentage of Mondale's cut of the electoral
votes was about percentage of votes that he got at our school.

1020. (OT) Dow Jones Election Predictor . .

Newsgroup: rec.radio.shortwave
Date: 2004-10-25 15:13:56 UTC
From: diverd4777@aol.com
Message-ID: <20041025111356.13404.00000663@mb-m26.aol.com>
Source record: 1019

http://www.busrep.co.za/index.php?fSectionId=565&fSetId=265&fArticleId=2272281

If the Dow Jones industrial average slips more, Kerry should win
October 24, 2004

by John Dorfman

If the Dow Jones industrial average continues its current decline, we may be inaugurating John Kerry as president.

That's a prediction based on data developed by James Stack, a market pundit from Whitefish, Montana. Stack notes that in 24 of the 26 US presidential elections since 1900, the direction of the stock market in the two months preceding the vote accurately predicted the election.

http://finance.yahoo.com/q/ta?t=3m&s=%5EDJI&l=on&z=m&q=l&c=&c=%5EGSPC

Again in the Dow Jones, industrials predicted a victory by the incumbent party. If the Dow fell, the incumbent party lost. The only two exceptions were 1956 (when the Dow dropped 2.8 percent but Dwight D Eisenhower won re-election) and 1968 (when the Dow rose 3.1 percent but Hubert Humphrey and the incumbent Democrats lost to Richard Nixon).

So far, the Dow has a total return of negative 1.9 percent after dividends from September 2 through October 12.

Politics and stocks intersect in two ways. You can buy stocks that may get a short-term or intermediate-term lift from one candidate's victory. Or you can watch stocks in the days leading up to the election to see if the market is giving a hint as to who will win.

If chemical, oil and defence stocks are strong in the rest of October, that will be a sign that Wall Street anticipates a win for President George W Bush. If education and environmental- protection stocks are strong, it may mean that Wall Street is betting on Kerry.

A victory by Kerry would probably be good for environmental stocks (Democrats generally favour more anti-pollution regulations) and for education stocks. Both candidates promise to support education, but I figure Kerry would spend more money on it.

The re-election of Bush would most likely help oil, chemical and defence stocks. Bush spent part of his life in the oil industry. Vice-president Richard Cheney was chief executive of Halliburton. Both have friends in the energy business and are sympathetic to its concerns.

Because Republicans usually favour fewer and more industry- friendly environmental regulations, chemical companies and oil companies would probably

have to spend less under Bush to comply with environmental laws.

As for defence spending, I believe both parties support continued increases. (That's why I own a lot of defence stocks.) The pace of increases would probably be more rapid under a Republican administration.

Healthcare stocks are a mixed bag. Drug stocks, I believe, would do better under Bush. A Kerry administration might be more likely to accelerate drug imports from Canada, regulate the healthcare industry and set limits on the prices that government programmes such as Medicare will pay for drugs.

Some other healthcare stocks might do better under Kerry. He might, for example, support more generous Medicare spending on home healthcare.

Bush's tax policies, in my judgment, tend to favour people in the top tax brackets, while Kerry's are geared more to giving middle-income people a tax break. Sellers of luxury goods, therefore, might benefit from Bush's re-election, while lower-end retailers might gain from Kerry's ascent.

Then there's the bond market. Both parties claim to be the party of fiscal responsibility. In fact, it remains to be seen whether either party can balance the budget. I think Kerry has as good a shot at this task as Bush, but the conventional wisdom is that Kerry, as a Democrat, would be a freer spender The influence of the election on the stock market is limited. Economic and geopolitical issues move stocks. Who occupies the Oval Office is only one part of the picture. - Bloomberg

<good stuff snips>

RHF - is there any reason why this antenna could not be adapted for
outdoor use? Good construction, some simple weatherproofing and
mounting on a rotator with plenty of slack coax for turning should
give a unit that could stand up fairly well, right?

It's called a "Bubble Jammer." Do a Google search for it, and
you'll see you weren't too far off in your naming it.

"In a bid to get out the vote for John Kerry, Democrat activist groups in Ohio have registered at least two known terrorists involved in a plot to blow up a shopping center.

"Nuradin Abdi, a Somali immigrant and admitted al-Qaida member who was indicted earlier this year as part of a conspiracy to blow up the Columbus Mall, was registered to vote by the left-wing group ACORN, according to the Columbus Dispatch.

"ACORN has spearheaded an aggressive Democrat vote drive in the battleground states.

"Iyman Faris, another new Ohio voter added to the rolls by Democrats, is serving a 20-year jail sentence for his role in surveilling potential al-Qaida targets, including the Brooklyn Bridge, the Dispatch said.

"According to Ohio News Now TV network, Abdi's name was added to the rolls by ACORN employee Kevin Eugene Dooley as part of the group's Project Vote operation. ..."

Let's see, Kerry has lied about meeting with the UN Security Council... and he has lied about being at
a particular baseball game...

His memory sure is suffering...

And Liz Edwards sounds like she's threatening riots...

That's amazing, I have to tip my hat at your QSLing abilities.
Angola at that time was involved in a raging war with UNITA and the country
was in chaos, so I am amazed that you got anyone there to reply to you.

Tell us how you did it, as, believe me, it just didn't happen?
Did you send the QSL in Portuguese? Did you send a reward?
Mostly, if you included a dollar they would pocket it and you would never
hear from them.....

Radio Belarus (that was what they identified as - it used to be Radio Minsk in English) heard this evening (Sunday, 24 October) in English at 2100-2130 UTC on 7105 and 7280 kHz. Fair to good reception on both frequencies.

It may only be on Sundays at this time. I presume with the time changes effective next weekend, the Sunday broadcast will then move to 2200-2230 UTC.

Scotland's most successful radio show makes its comeback for shortwave and web listeners worldwide on November 6th.

Jack McLaughlin's Ceilidh began on floating station 242 Radio Scotland in 1966 as the antithesis of the BBC's rather prim style of presenting traditional Scottish music. The ship borne station came to an end, but the show continued on Scotland's first land based commercial stations Radio Clyde and Radio Forth. And it soon crossed over to television as ITV's phenomenally successful Thingummyjig, leading to hit versions on stage and records.

See long and interesting article by Andy Sennitt at http://medianetwork.blogspot.com/

Aimed now at listeners to shortwave in the USA, Canada, and western Europe, McLaughlin's Ceilidh airs on *radio six international *on Saturday, November 6th at 8.05pm Eastern (Sunday 0105 GMT) on 5105 kHz and on the web at radiosix.com.

Please note: from November 1st, Radio Six's 5105 transmissions will run between 0000 and 0200 UTC to allow for the return to Winter Time in most of our listening area.

1044. Iran reintroduces shortwave for Europe and North America

Islamic Republic of Iran Broadcasting (IRIB) is reintroducing shortwave transmissions beamed to Europe and North America for the new winter broadcasting season. According to the IRIB Web site, English will be available to Europe at 1930-2030 UTC on 6110 and 7320 kHz, and to North America at 0130-0230 UTC on 9580 and 6120 kHz. Other languages are are also being reintroduced on shortwave for Europe (see full details at http://medianetwork.blogspot.com/)

1045. "Digital SW will revolutionise cross-border Radio"

Newsgroup: rec.radio.shortwave
Date: 2004-10-25 18:52:21 UTC
From: Mike Terry <miketerry73@btinternet.com>
Message-ID: <clji14$2do$1@hercules.btinternet.com>
Source record: 1044
Cross-posted to: alt.radio.digital,rec.radio.shortwave

Monday, 25 October 2004

"Digital short-wave will revolutionise cross-border broadcasts and will initiate a world-wide renaissance of radio". This was the opinion of the Director General of Deutsche Welle, Mr Erik Bettermann, during a panel discussion at M�nchner Medientage.

Bettermann, the head of the German international broadcaster - and instigator of the event - was not the only one to present an optimistic prediction of a "Digital Global Radio" development: The other panel specialists also emphasised the advantages of digitalisation in the so-called AM range, i.e. short-, medium- and long-wave.

The discussion was chaired by Peter Senger, Director of Distribution at Deutsche Welle and Chairman of the Digital Radio Mondiale (DRM) Consortium; and next to Erik Bettermann, BBC representative Mike Cronk, Dan D'Aversa of RTL Group and Phil Laven of the European Broadcasting Union (EBU) were also participating in the debate.

Senger outlined the advantages of digital short-wave as follows: The world-wide accepted DRM standard provided an excellent audio-quality comparable to FM. In addition, the search for frequencies was obsolete, as the station identification tuned in to the designated frequency and automatically switched to the best one. In parallel, it allows for the sending of accompanying programme information such as text messages.

"On top of everything, digital transmission technology saves a lot of energy and costs compared to the analogue one", Senger said. This would open up enormous opportunities, especially for international broadcasters.

For several years, DW - like many other broadcasters - has noted that listeners migrated from short-wave to FM or other new distribution channels in digital quality, said Bettermann. Deutsche Welle had to stay abreast of these changes. "According to test transmissions being operated by Deutsche Welle, we anticipate large area coverage in almost FM quality without interference such as jitters, induced power-noise or fading", the General Director stated. At the same time, not only stationery indoor reception, but also mobile reception in cars and with small portable devices is possible...(snip).....
Mike Cronk stated that the BBC had invested heavily in DRM and that they were now developing "a detailed strategy for its initial deployment, probably into Europe, in 2005". According to Cronk, DRM offered the unique combination of wide area short-wave coverage and FM usability and quality. As a consequence of using this digital medium, continuous direct delivery to the audience avoiding "political or other regulatory obstacles" will be

possible...(snip)....

Does anyone please have datasheet for NEC ï¿½PC-1213C or NTE 1615? Ir is a DIP-8, 2.4 W audio amplifier IC used without any cooling fin in SONY ICF-6500W shortwave portable receiver. The chip is apparently overloaded since it frequently fails in this radio. My options are either to buy a replacement at Mouser or to install another IC with more power. To find an acceptable more powerful IC I need a data sheet for the original one. The web search failed to locate any data.

Any lead is greatly appreciated.

More about the guy you voted for dxAss - hard to believe you love your country when you put your pride in front of it.

WASHINGTON (Reuters) - The Army Corps of Engineers' top contracting official has demanded an investigation into contracts given to Halliburton, citing improper action that favored Vice President Dick Cheney (news - web sites)'s old company.

According to documents made available to Reuters on Monday by congressional sources, Army Corps whistle-blower Bunny Greenhouse complained of repeated interference in billions of dollars of contracts given to Halliburton unit Kellogg Brown and Root for work in Iraq (news - web sites) and the Balkans.

Kerry is a profiteer who's lies about Vietnam killed American GIs. Your traitor boy Kerry is even honored with his picture in a communist museum honoring their war heros. Kerry is one of their war heros for helping them win the war against the US. You must really feel proud of him for being he traitor he is.

I bought an older (circa 1970) 121.5 ELT at a auction several years
ago.
And this unit had no modulation. Simple oscillator, followed by a
trippler,
a driver and a power amp. It had several shock switches in parallel.
This unit was designed to be clamped to the inside frame.
I always wondered just how well it radiate from the inside.
I have heard three ELTs, two hard landings, I live about 6 miles from
Lexington BlueGrass airport in Lexington Kentucky, and one was a
accidental trip in a local neighborhood. All three had a distinctive
"Wail" that is hard to discribe. I keep one scanner tuned to 121.5,
243 and some other hot freqs, and one Saturday morning I heard the

wailing of an ELT, and after 30 minutes, decided to go find it. With my wife drivign and me RDFing it took us about 15 minutes.
I used a Pr02004 with an adjustable RF antenuator to find the street. Then used my Pro34, wrapped in aluminium foil to narrow it down. We listened to the CAP for the next 4 hours until they found it. I did call the tower and tried to expalain what I had found, but they thought me a kook.
Maybe the SAR satellite has to accept any signal on 125.5 as valid. I do know that older ELT did not have moudlation. But I would have expected the FAA/FCC to require replacement by of all of the older units by now.
Terry

I went and dug out a copy of my original report and it was in Portuguese. If I recall correctly I probably sent mint stamps for them to use in reply.

As it was the 5th of December I may have been on a DXpedition over on the east side of the state.

QSL'ing used to be a lot easier.

Billy--I expect this kind of crap reporting from proven biased
mouthpieces like Reuters--you know, mentioning Cheney's name when
there's no evidence whatsoever that he was involved in anything
covered by the story ("interference" --whatever that is). However,
I'm shocked (shocked!) to see a person of your intelligence try to
make something of it. Please inform how the piece quoted above is, as
you say, "about" Cheney other than the fact that the media wing of the
Democratic party feels obliged to mention him anytime they mention
Halliburton.

DX ACE,

The Liberal Hand-Out is just a Distraction.

Liberals do it to get your attention; all the while
using their 'other' Hand to Pick-your-Pocket.

Liberals think 'god' gave them two Hands to Tax and Spend.

The Liberal Code Words Mean: Tax (Lie) and Spend (Steal)

John 'ff' Kerry is a "Big Time" LIBERAL !

It is amazing how these simple minded liberals will yammer on and on
about oil, but the first time they pulled up to a gas pump and couldn't
get any gas for their SUV they would scream bloody murder.

2245z 5105 kHz has an incredibly strong signal, American station discussing economics. Has not ID'd in over 15 min of talk. Trying to sell gold, historically about as exciting an investment as tanzanite on the home shopping network, lol. Anyway, nothing from Scotland could overpower this guy in the US or Canada.

> Bruce Jensen

BJ,

It is my understanding that the Coax Cable Lead-in-Line can not
be to long. If as you say, you used good construction techniques
and Weather Proofed everything then it should work OK OutSide.

ROTOR:
The "Rotor" should work OK for 'Peaking' and 'Nulling-Out'
Signal in the AM/MW Broadcast Band and to some degree in the
Shortwave Bands below 5 MHz. IMHO: Above 5 MHz the Rotor
may not do much good. For 'local' Man-Made-Noise RFI/EMF
InDoors or OutSide; usually once you Null-it-Out you need not
move or position the Loop Antenna Element again.

PRE-AMPLIFER:
I would think that using a Pre-Amplifier in the Feed-in-Line
about 'one diamerter' from the Loop Antenna Element might make
the whole thing work a lot better.

FWIW: I just tried a RadioShack Catalog # 15-1118B TV=-VCR-FM
10dB Signal Amplifier and it gave a 'boost' of about S-5 to S-7
in the AM/MW Band and across the Shortwave Bands.
- Listenable Signals in the S-1 to S-2 range became S-7 to S-9
and easy to listen to.
- Very 'weak' (faint) Signals in the No S-Meter reading (S-Zero)
became Listenable at S-5 to S-7.

That station is WBCQ, and it would appear that Radio Six International will be
using that transmitter for its program.

The Wellbrook performs very well near ground level!
From a chap in Belgium -
http://www.astrosurf.com/lombry/qsl-ala1530.htm

The above extensive review should peek your interest. Although I haven't owned this type of loop before I am seriously considering it for my noisy RF environs. I only need to figure out how to get it into and between the attic rafters and mount it on a small rotor.

For you, maybe. However this could rejuvenate these bands for mainstream use,
instead of them being increasingly relegated to small pockets of niche users,
which will eventually see all major broadcasters dumping SW if left unchanged.

I rather doubt that the 'mainstream' will ever gravitate back to shortwave.

Keep dreaming though.

Opps, are you sure it's not NTE1516? That one is coming up as a dip 8 audio amp.

Hmmm - just like IBOC is 'QRM' for FM reception?

SW broadcasting is funded so that listeners can hear programs, not for the benefit of amateur DXers.

DRM lets the intended listeners actually hear those programs clearly, and tune them in easily. It sounds like you don't like it cause it sounds like noise on your (probably highly expensive) set-up, and you like the tuning process to be as difficult as possible.

Yes, without co-ordination there may be interefernce problems during the transmition period, but the sooner the world goes DRM the better international radio broadcastings prospects IMHO.

>You have some proof to back up that statement?

Why can't you ask that of Bush, as a responsible citizen would?

Oh, that's right, you're a coward who hates yourself and the USA.

Those of us who are real Americans are brave and know that it's
our duty to scrutinize and supervise our public officials. We want
to know why Bush hasn't taken his physical. We want to know
why Bush lied about himself, about 9/11, and about Iraq. We
want to know when and where Bush is going to stop the buck.
That's because we belong in the USA and make it what it is.
You're not expected to understand that, either, bushkultie.

You might be surprised, if they bring out usable sets with combined DAB/DRM that can pluck signals from Band-III, FM, SW, LW, MW based on station titles totally abstracted from frequencies, you might find people listening to SW without them even being aware of it.

> Keep dreaming though.

Anything is better than the current nightmare of a dying medium with little else to offer but propaganda stations from curious parts of the world, firebrands reciting scripture and others reciting Pi.

Some folks don't necessarily consider it a 'predicament'.

Get yourself a nice FM radio or an XM or Sirius setup.

Be happy, and don't screw up someone else's spectrum.

Perhaps you will tell us how the intended audiences of most shortwave programming will be able to obtain these DRM receivers? Since most of these broadcasts are intended for audiences outside their own countries, and for other than their own expatriots (e.g. third world or oppressed populations), those audiences are not likely to be able to afford (even if they could obtain) such radios. Ordinary AM shortwave could be received with nothing more than a few meters of wire, a variable capacitor (and even a fixed one will work, depending upon design), a diode and an earphone. Reception of DRM requires technology that is not available to much of the world.

Well, doggone it...why didn't you call me? ;)

Seriously, I'm going to be listening for this one. Wait...I'm at work at
11:19 PDT. :(

Dammit, I want to hear the spies and outlaws!!

> Be happy, and don't screw up someone else's spectrum.

It's not a matter of me, the broadcasters are perfectly entitled to 'screw up' their own spectrum, be that with an new ITU approved system for example.

Do you seriously believe they'll be anything left to screw up if left on its current course?

The broadcasters, who are the ones' that have to spend money remember, have certainly identified with this 'predicament' over many years. How much fun will your DX efforts be if nobody bothers to broadcast anymore? Granted, there will always be those to draw a sadistic pleasure from eeking out the last signal broadcast the other side of the world.

Unfortunately you can't support a system that is broadcasting to a few hobbyists who are more interested in the medium not the message

One would imagine you'd appreciate something new to DX.

Az.

1105. Re: '60 Minutes' Documents on Bush Report the Truth that George Bush is a Total Disgrace

ZEPP,

What you need is the ENTIRE "Un-Edited" Audio Transcript which
includes the stuff that CBS, 60 Minutes and Dan Rather did not
put on the Air. (The so called Producer-Director's First-Takes.)
Then you will 'know' the Whole Truth [.]

Marion Carr Knox NEVER Typed Those Fake Documents.

Marion Carr Knox NEVER 'said' she "Typed" any document with those
Specific Material Facts for Lt. Col. Killian for and about Lt. GW Bush.

Once Again - Read It Closely again, and Again. and AGAIN !

The Question Remains:
WHY WON'T CBS AND DAN RATHER APOLOGIZE TO THE KILLIAN FAMILY ?

For Fraudulently using Lt. Col. Killian's "Signature" on Forged Documents.

Just you wait and see! Yessir, it's time to do the Democrat Hokie-Pokie!

You put your LEFT foot in....and move it farther left...

You cut your RIGHT foot off....and claim disenfranchisement....

Hey, I think I'm on to something here...gott get my rhyming dictionary...

I highly doubt the "Republican" moniker.
Ass Wipe, on the other hand...yeah, you're an asswipe.

What's your point, though? You admit to being an asswipe,
but I'm not surprised or enlightened by this.

Please explain.

Thanks. I see a reference to that at http://www.wbcq.com/index.php

Earlier I had skipped over that link at looked at a reference to Glenn Hauser's Shortwave/DX Report at: http://www.dxing.com/dxr/dxld4126.htm where he mentions:

Verified Jim Cedarstrom's Patriot Trading Group rebroadcast at 6PM on Friday on 5105 // 9330 // 17495.

Don't know if this stuff sounds familiar to you or not.

Jack

A journalist who claims that his "massaged version" of an interview is
a direct quote has a few things to learn.

quote -
"All electronic equipment creates a frequency called a tempest," he
said. "Sometimes these frequencies emit low-level signals that are
close to the 121.5 MHz signal."
end quote -

BRS,

Caught Ed Bolton the other night and he said that
the Amos and Andy Programs would stop if . . .
People did not send MONEY !

The "Amos and Andy" Show by Ed Bolton on WBCQ
http://www.zappahead.net/wbcq/main.php?fn=show_program&id=6

Annotated WBCQ Program Guide for Ed Bolton's Amos and Andy Show:
* Monday - 7.415 MHz at: 12:00AM 12:15AM / UTC 0400 0415
* Tuesday - 7.415 MHz at: 12:00AM 12:15AM / UTC 0400 0415
* Wednesday - 7.415 MHz at: 12:00AM 12:15AM / UTC 0400 0415
* Thrusday - 7.415 MHz at: 12:00AM 12:15AM / UTC 0400 0415
* Friday - 7.415 MHz at: 12:00AM 12:15AM / UTC 0400 0415
* Saturday - 7.415 MHz at: 12:00AM 12:15AM / UTC 0400 0415
Ed Bolton's meticulous re-creation of the early Amos and Andy
episodes from the original scripts. Most of these famous radio
shows were either not transcribed or no recording survives.
The episodes are being presented in chronological order.

NOTE: Mr Bolton also produces Uncle Ed's Musical Memories.
http://www.zappahead.net/wbcq/main.php?fn=show_program&id=64
* Thursday - 7.415 MHz at: 06:30PM 07:00PM / UTC 2230 2300
Music from the thirties and forties presented by Ed Bolton,
Ed usually gives a brief history of each classic recording played.

The 'complete' Annotated WBCQ Program Guide:
http://www.zappahead.net/wbcq/

I was on a flight from New Zealand to Australia a few weeks ago and as the plane taxied out onto the runway a cell phone started ringing in the overhead locker above me. There were many disapproving stares from other passengers and crew, until I pointed out that one of the cabin crew had put his bag up there too. Whoops!

Height is not that important to a small loop. It will pick up more long
distance signal and even less local noise the higher up it is placed so
like most any antenna higher is better. This antenna will work better
close to the ground over most types with the exception of an antennas
like a Beverage that is designed to work near ground.

Yeah, saw that and you're probably right. There is a chance however that the journo has paraphrased despite what his use of punctuation suggests - I've known it to happen before. I'd *like* to think that the rescue dude was slightly less simian than the journo, even though I'm not on the same continent I'd just feel better. :-)

Cheers.

Any antenna will work better outside. The only difference between an
outdoor and an indoor is weather proofing and the strength to stand the
elements.

Wonder how that would have turned out in California.

Sunday at the coffee shop I frequent I got to see a goof ball wearing a
Bush mask asking people to vote for him. The little kids with their
parents would say no way since Bush was bad. Wonder where they got
their programming from home or school.

Of course none of them would know about Kerry's war atrocities or the
treason he committed or the lack of leadership or accomplishment he
displayed in over two decades in the Senate or his flip flopping on
matters on national security or the outright lying during his campaign.

A nation free of torture chambers, about to
celebrate a democratic election is nothing?

That's a helluva thing to say, I think....

You must be joking, Jeffrey. Either that, or you know nothing of Karl Rove.

Ask someone about the incident in 1986, in which he bugged his own
office and blamed it on the Democrats. And that was just his first major
stunt...

I have a bad feeling that there may be riots no matter who wins. The
country is very polarized thanks to Mr. Vietnam war protester being the
anti-Bush instead of promoting a positive agenda.
